Positive Thinking for Physicians

PROPERTY OF THE
NATIONAL LIBRARY OF MEDICINE

SOMETIMES THE BEST DEAL IS THE ONE YOU HAVEN'T HEARD ABOUT.

Maybe you haven't heard about the Medical Inter-Insurance Exchange (MIIX). After all, we're a relatively new player in Pennsylvania's medical professional liability insurance marketplace.

But ask your counterparts in New Jersey, and you'll find we've been getting rave reviews since we wrote our first policy there in 1977. We're proud that 98 percent of our 9,000 insured physicians renew their policies each and every year. With such an outstanding track record, we must be doing something right.

Perhaps it's our **innovative products**, such as our new **$500,000** HIV benefit that provides income protection — at no additional charge — for physicians who become HIV positive. We were the first professional liability insurer in the state of Pennsylvania to offer this coverage.

Or maybe it's our **commitment to service**, which includes 24-hour customer assistance and a claims staff that's the best in the industry. Our insureds know that MIIX makes sense financially, too, considering our outstanding discounts for new and part-time practitioners. We also offer flexible premium payment plans that help you manage your money.

Because MIIX is a **physician-owned company**, you can be assured that everything we do is designed with your best interests in mind. Call us today so you can join your peers who are already benefiting from the MIIX difference.

Physicians Have a Place in the Political Process

Since instituting Medicare in the 1960s, government has played an increasing role in the practice of medicine. To maintain autonomy, the '90s physician must become involved—by keeping abreast of current legislation, and contributing time and resources to the political process.

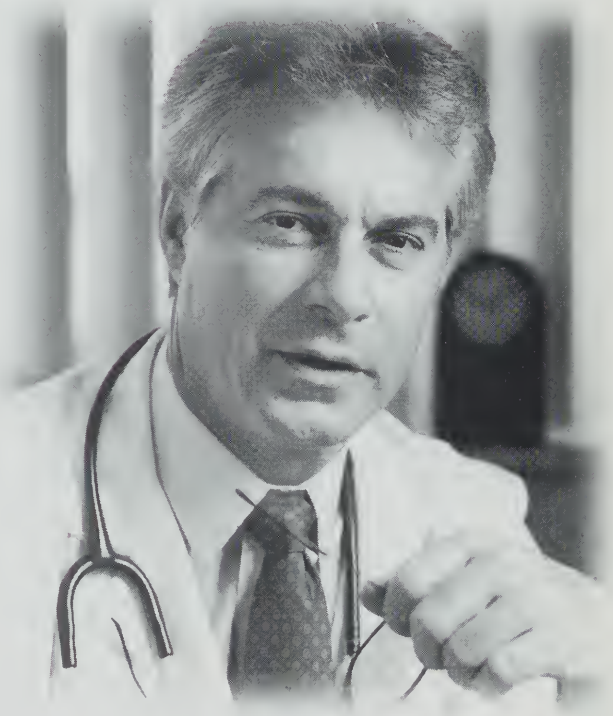
"Unfortunately,

he was already sitting in my examining room. This guy was a walking liability suit looking for a victim. He was angry, non-compliant. It was one of those rare, no-win cases and, well, I guess my number was up.



Then I remembered PMSLIC. So I stepped into the next room and gave them a call. They put me in touch with a member of their Risk Management team, who advised me of the relevant legal issues and the implications of each of my alternatives. Right on the spot. As a result, I was able to make the best medical recommendation with the peace of mind that comes from knowing my legal interests were also protected. I guess that's what it's all about. Peace of mind. The kind you only get from people who really take the time to help. That's excellent service. I'll never change carriers."

COMMITTEE TABLES HOUSE BILL 1497: The House Health and Welfare Committee in mid-December tabled by a vote of 12-5 House Bill 1497 which would mandate physician participation in a referral network for Medicaid patients. A week earlier the bill had been tabled by an 11-4 vote. The Society, while supporting the bill's intent to create referral networks for Medical Assistance patients, opposes language that would impose fines, licensure sanctions, and loss of hospital privileges upon physicians who choose not to participate. The Society says the current version of the bill would "negatively impact the effectiveness of voluntary [referral] programs that presently exist." The committee chairman may bring an amended bill to the committee for a third vote later this month. The Society will work to ensure that any amendments are palatable, and if not, will seek a "no" vote on the bill. For background, see page 13.

CLIA DEADLINE PASSES, NEW TEST CATEGORY PROPOSED: Physicians operating clinical laboratories at the moderate or high complexity levels are reminded that as of January 1 they must be enrolled in an approved proficiency testing program. Proficiency testing is also required at the physician-performed microscopy level when available. For additional information, call the Society's Department of Educational and Scientific Affairs at (800) 228-7823. In related news, the Health Care Financing Administration (HCFA) and Centers for Disease Control and Prevention (CDC) have proposed a final regulation to the Clinical Laboratory Improvements Amendments (CLIA) of 1988 which would establish a new Accurate and Precise Technology (APT) laboratory testing category as part of the moderately complex category. Although specifics are not yet available, the CDC says the category will include almost all testing equipment used in the physician office laboratory. No regular inspections will be required, although random inspections may occur. The comment period on the regulation was expected to begin this month.

AMA CLARIFIES REFORM POSITION IN LETTER TO PRESIDENT CLINTON: In a letter to President Clinton clarifying its position on financing health system reform, the AMA said it shared with the administration "common goals" for reform, including universal coverage, community rating, portability, administrative simplicity, and choice. The letter followed reports that the AMA no longer supported universal health care coverage, and explained that the AMA's expanded policy—adopted by its House in December and spurring the inaccurate reports—is "more flexible" and allows the AMA "to support integrating other approaches...with an employer requirement to achieve universal coverage."

SOCIETY DISCUSSES STATE REFORM WITH GOVERNOR'S STAFF: In anticipation of Governor Casey's return to work in December, the State Society met with his policy staff to discuss health system reform issues, including mandatory managed care and the basic benefits package. The administration indicated it did not intend to eliminate fee-for-service as an option and invited the Society to participate in discussions about how to develop a model benefits package. A report of those discussions was due to the Society's board at its January 12 meeting.

TRUST ANNOUNCES NEW EXECUTIVE DIRECTOR: The Society's Educational and Scientific Trust has named Matthew J. Tornambe, Mifflintown, as executive director beginning February 1. Tornambe will succeed LeRoy Erickson, who is retiring after 34 years of service to the Society. Tornambe comes to the Trust from the Central Pennsylvania Chapter of the National Multiple Sclerosis Society, where he was executive director for the past 10 years.

TWO PENNSYLVANIA RESOLUTIONS ADOPTED BY AMA HOUSE: Two resolutions presented by the Pennsylvania Delegation to the AMA on primary/ consultative care and proxy voting at medical staff meetings were adopted as submitted during the AMA's interim meeting in New Orleans in December. Look for detailed coverage of the meeting and delegation election results in the February issue of this publication.

SOUND PROTECTION

Princeton knows professional liability insurance.

And we know the disquieting reality. No matter how excellent your skills, you can still be drawn into a medical malpractice lawsuit.

We provide a strength that's instrumental to peace of mind. Just note our success rate over the last four years for cases in the courts: 95 percent were resolved in favor of our policyholders.

That's sound protection for doctors who choose Princeton.

Princeton. It's worth it!

Wake Up: Let's Use Our Strengths

John W. Mills, MD
Medical Editor

As a trustee of the Pennsylvania Medical Society, I recently attended the AMA's Philadelphia meeting, "Physicians' Forum: Agenda for Action" (see page 30 for news story).

Although the attendance in Philadelphia exceeded that of the other two AMA regional forums held recently in San Francisco and Dallas, AMA staff were still perplexed as to why the turnout was so poor in Philadelphia. I think it's very simple: We physicians are sick and tired of all the rhetoric on health system reform, ranging from the Clintons' 4-pound-10-ounce, lopsided deal, to the proliferation of other health system reform papers.

"We physicians are sick and tired of all the rhetoric on health system reform."

Let's look closer at the Philadelphia experience. Saturday morning started out as an honest effort to host an array of good speakers. Representatives William Thomas (R-CA) and J. Dennis Hastert (R-IL) each contributed worthwhile information on how Congress will probably tackle the issue of reform and what the timeframe might be. Adequate audience question time with direct answers was a plus.

As lunchtime approached, however, we sensed that the afternoon's schedule would be an unknown, since the U.S. Senate was in a filibuster over gun control. Our country has matured considerably during its 200-year-plus history, but the Senate is lacking that same maturity in their childish ways. Politics? Baloney! I believe we should expect our senators to behave in a mature manner—forget the theatrics—when they are debating serious issues. That filibuster effectively wiped out the afternoon for the forum attendees. Obviously, this was not the AMA's fault.

The luncheon speaker couldn't have been worse—the room was half empty when Philip Lee, MD, second in command to Secretary Donna Shalala, finished. He spoke the party line to the point of absurdity. I suppose one shouldn't expect much from a physician who has been in government service since the Johnson administration.

It was all down hill from there. Louis Sullivan, MD, former secretary of Health and Human Services, spoke after lunch—a poor choice for a post-prandial audience. His answers were long-winded and circumventive. We didn't need this soporific.

The AMA, scrambling for fill-ins, put their board members who were present on a panel for questions and answers. It was sad to see the room gradually empty as the afternoon wore on.

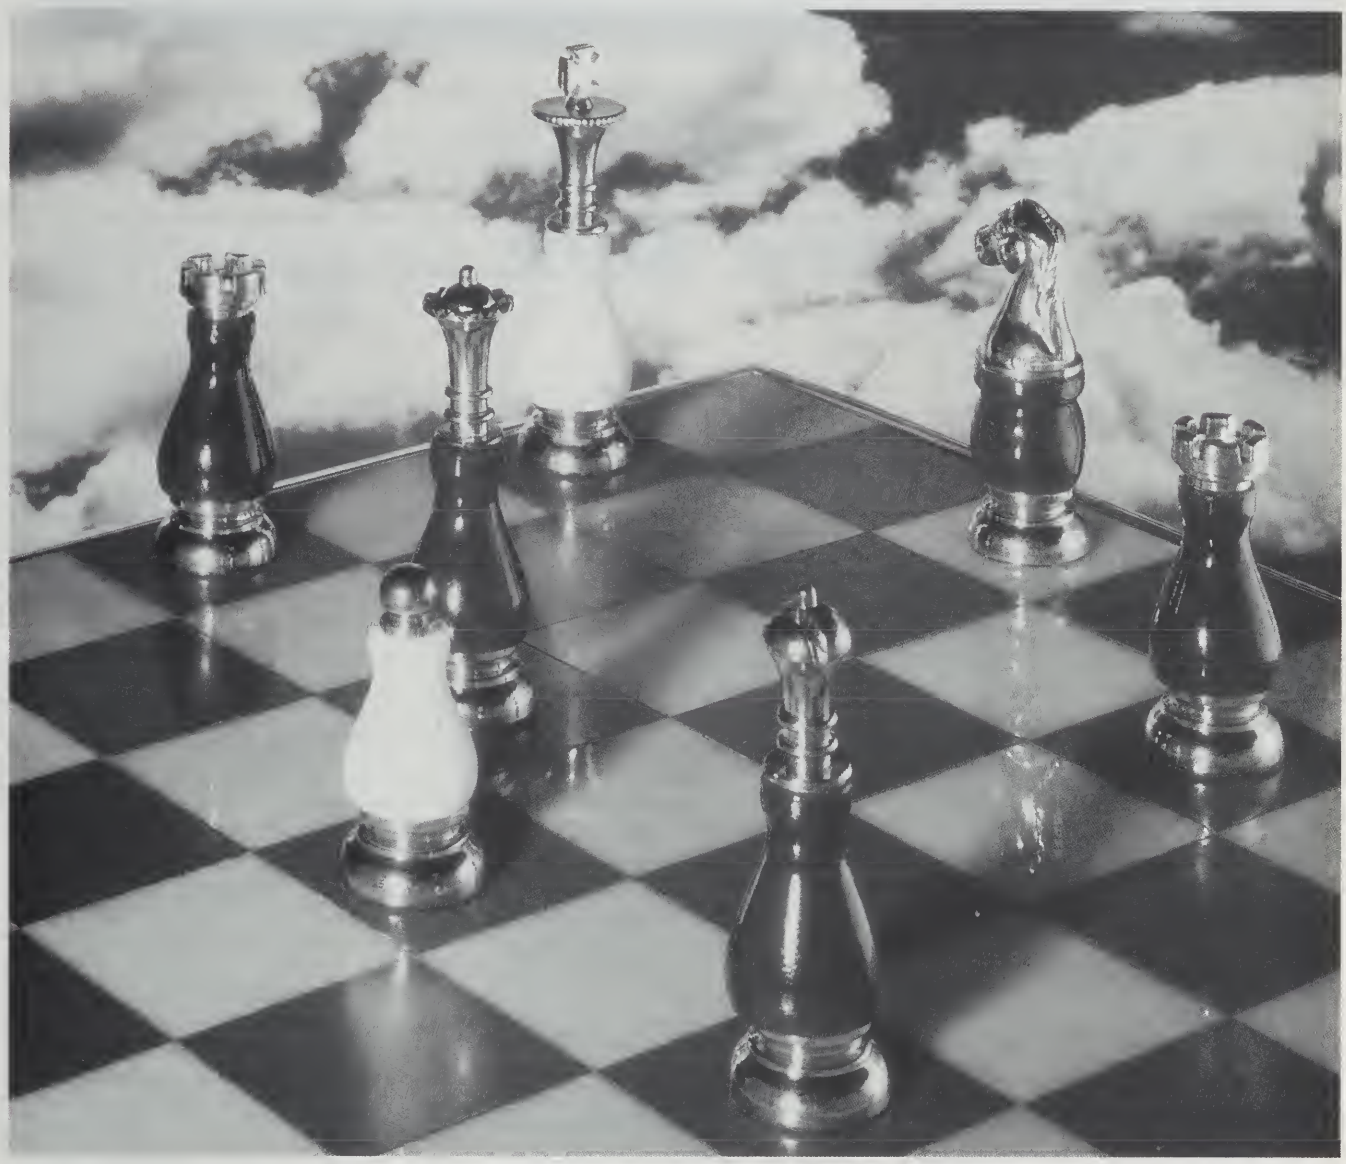
Sunday morning had three scheduled seminars. One was canceled for lack of registrants, but "When 60 Minutes Comes Calling" was quite successful, due in no small part to the AMA's Pat Clark and our own Amy Dugan, the Society's director of media relations.

I attended "Medicine in Transition—Strategies for Change." The main speaker got me off to a bad start by stating that "Medicine is no longer a profession—it's a business." I'll never be ready for that, and I hope you won't either. We aren't stupid; we know what a bottom line is; but we also know how valuable the doctor-patient relationship is, and if that goes, *everybody* loses.

The AMA tried hard to put on a useful conference, but we don't need to hear anymore rhetoric, and we can't waste anymore time—and money—attending this type of meeting. We need to get the word out to our patients back home STAT, and double time to our elected leaders.

We need action of the grassroots variety to help steer the course of health system reform. The problem is, we don't need to listen to the government's mouthpieces so much as we need to become mouthpieces ourselves. We can speak not only to the government reformers, but also to our patients—on their behalf. It's our only opportunity. The State Society and the AMA have developed materials to help us in this regard.

Wake up, AMA leaders! The federation of medicine has the biggest physician—and patient—audience in the nation. LET'S USE IT!



In claims, it's the endgame that counts

A malpractice claim brought against a physician brings to mind two things: reputation and money. We consider a third: the bond of care and trust between physician and patient.

Successful endgame results resolve all three. To do that, you need a consistent, winning strategy. Strategy that considers the merits of the claim, the complex court system and the National Practitioner Data Bank. Knowing when **and how** to fight is crucial.

In little more than a decade, we've achieved checkmate in over 95% of the cases taken to court. A vigorous defense, a successful conclusion for our policyholders. And always, your participation in every decision. When we need to settle a claim, settlements are fair to both parties.

We're here to serve physicians, patients and the healthcare field. How is this done? With financial stability, competitive premiums, integrity, and the right team members.

Physicians Insurance Company is dedicated to making all these elements work together. That's why we get to endgame with confidence. That's why we'll continue to be here for our policyholders.

A New Year Means New Work

Martin A. Murcek, MD

In observance of the new year, I would like to take a break from all the dismal concerns of health system reform and look at some of the more encouraging trends that bode well for the times ahead.

While we still have a long way to go, one trend that pleases me very much is the ever-dwindling acceptability of cigarette smoking. It seems every day there is a story in the news about some area or another being declared a smoke-free zone.

During the holiday shopping season, several malls in the Pittsburgh area banned smoking from all but small designated areas. Unlike Washington legislative mumbo-jumbo, this is a development that has an immediate, positive influence on the health of the public, and I applaud it. We still have to find ways to save smokers from themselves, but at least nonsmokers are being exposed to less second-hand smoke all the time. May this trend continue.

Another move in the right direction is government's stance—statewide and nationally—against "spiritual healing" as it applies to children. In the past, children have been denied timely, life-saving medical attention because their parents—religious fanatics—didn't believe in medical science and instead waited for some miracle while the child suffered and died. Often, no charges were brought against such parents, or the charges were dropped on the grounds of "religious freedom." Now, Massachusetts, Hawaii, and South Dakota have removed religious exemptions that shielded religious fanatics from being prosecuted for the outrageous neglect of their children.

Don't get me wrong, I feel that freedom of religious practice is one of the most important rights Americans have. However, that right cannot be allowed to supersede any American child's right to live, if it is in the power of medical science to help. Efforts to remove religious exemptions have failed in several other states, where politicians are hesitant to be seen as "messing with religious freedom," but this trend is catching on, and must continue.

A nascent trend, at least here in Pennsylvania, is one that deserves support from physicians: a renewed effort to change the destructive course of violent school-age children. A measure is soon to be offered by Pittsburgh City Council to establish a "boot camp" facility for youth offenders, as an alternative to traditional incarceration for acts of crime.

There are many hypotheses about the root causes of the increase in violent offenses committed by youngsters, but it seems reasonable that a return to strict discipline may be the best shot for some of these troubled young people at turning their lives around. I support—and I feel you should also—efforts to get these violent youngsters back on the right track. Boot camps, instead of the general prison population, seem like a good approach to follow.

There are some trends that need to be changed. Let me mention a few of them.

Despite the current Washington administration's continual grandstanding about caring for the health of all Americans, the typical government-subsidized school lunch still has almost twice the government-recommended fat content. Physicians need to pressure lawmakers to mandate lunches that are not only hot, but also healthy. Let's get on it.

Other than the occasional sensationalized story of an arrest or collegiate scandal in the newspapers, there is still little being done about steroid abuse by children and teenagers. While this problem was once confined to high school and college athletes, we are now seeing kids who aren't even athletes exposing themselves to the horrible destructive side-effects of steroids. If you have adolescents among your patients, be on the lookout for signs of anabolic steroid abuse, and tell all your young patients, male and female alike, that steroids are a disaster, and they should have nothing to do with them. Tell them to tell their friends at school, too.

A new year means there's new work to do. I wish you, your family, and your patients a happy, healthy, upbeat year ahead.

LETTERS TO THE EDITOR

DROP THE LABELS, HELP YOUR PATIENTS

Now that the psychiatrists have declared premenstrual syndrome (PMS) to be a depressive disorder, the outrage of feminists is both predictable and understandable. Predictable because they do not want some normal women to carry the label of mental illness throughout life, and understandable because of the widespread confusion about what a disease, in fact, is.

The popular understanding of a disease is an entity of some sort to which symptoms are attached, much like the cabbage at a cocktail party which is never eaten and which is studded with toothpicks holding hors d'oeurves—thus, the common expressions like, "He caught a cold," and "He gave it to his classmates."

That notion of disease is wrong. A disease, per se, does not have any existence. All that exists are people with signs and symptoms. Clusters of signs and symptoms that occur together frequently have been given names for convenience. Thus, the occurrence of fever, cough, runny nose, red eyes, and rash is called measles.

Nosology, the systematic classification of diseases, comes only to this: a variety of what, in mathematics, is called set theory. A disease is a set whose members are the particular signs and symptoms that are assigned to it by definition.

In the case of PMS, the feminists have a point. The condition—premenstrual syndrome—already has a name, i.e., it is a set. Because a committee of psychiatrists found that some of the members of the set (symptoms) overlap with some of the symptoms they have (also arbitrarily) assigned to the sets they named Depressive Disorders, they want to include PMS under that rubric in their system. Actually, the symptoms they assign to depressive disorders are found in a host of perfectly normal people. It does no good, except perhaps to the egos of certain psychiatrists, to have people think their trouble is mental when, in all likelihood, it is chemical. If they knew their craft, they would drop the labels, recognize that there are only sick people, and apply their talents to helping them.

O.K. Stephenson, MD
New Bloomfield

KNOCKING OFF OUR WHITE HATS—AGAIN

Editor's note: Portions of the following are paraphrased from a letter originally addressed to Jean Brown, PharmD, associate professor of pharmacy at the University of Arizona and pharmacy editor of "Drug Utilization in Practice," a national newsletter "for physicians serving the Blue Cross and Blue Shield Federal Employee Program." It was submitted by the author for reprint in this publication. Percentages listed are derived from AARP survey data published in the newsletter.

Upon receiving the first "Drug Utilization in Practice" [October 1993], I offer these observations.

Prior to my entry into medical practice in 1976, I had accumulated 14 years of experience as both a hospital and retail pharmacist. I recall a "news item" proclaiming 10 percent or so of hospital admissions were due to adverse drug reactions, but I can't relate the source. The piece insinuated that prescribers were, essentially, to blame. I also recall the article did not detail the type of "adverse drug reactions," and I can only infer these were most likely pharmacologic extensions of activity (e.g., hypokalemia as a diuretic consequence), and although hardly acceptable, they were certainly not surprising and, for the most part, unpreventable.

An article in "Drug Utilization in Practice" takes another view, but promotes the same theme—the prescriber is to blame. This time, however, the problem is failure to use the medication. The article states: "Most [patients] have the ability to be compliant...Patients sometimes feel that they are wasting the physician's time if they want to discuss their medications. Or the patient may feel that he or she cannot tell the physician that the medication did not work as expected...Better communication between the provider and patient is essential to improving compliance." It seems that we physicians consistently have our white hats knocked off our heads whatever we do!

If the current crop of consumers who want to play a larger part in helping to direct and/or manage their medical care are serious, when are they also going to accept some of the blame for not paying attention, ignoring our advice, or simply failing to follow instructions? None of these are listed by the cited AARP survey as "common causes of noncompliance," but they certainly are not rare.

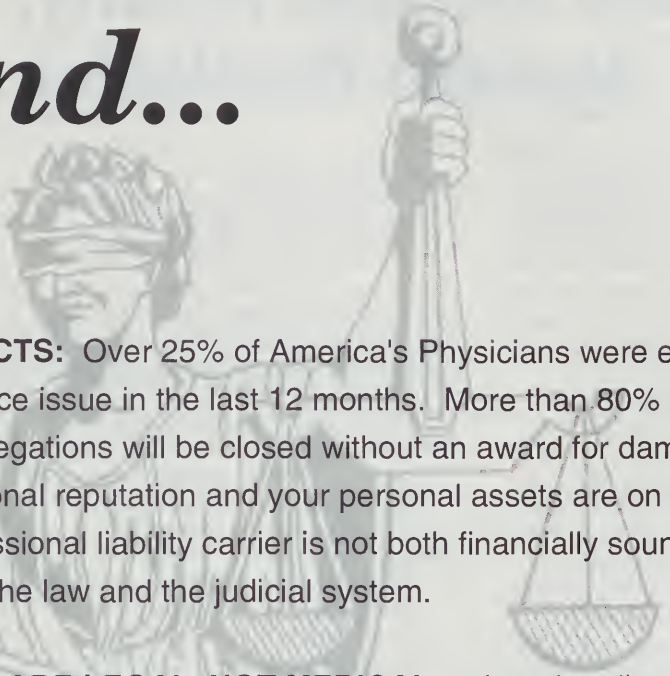
Many problems in medical practice today can be traced to consumer activists trying to help us do our job. They've succeeded in interjecting enough suspicion and mistrust into our patients to explain 94 percent of the AARP reasons for noncompliance.

I'm disappointed that the newsletter article didn't help point out that invariably one can lead the horse to water, but there is no guarantee it will drink. I offer a medical practitioner's view of the same reasons for noncompliance:

- *Concern about side effects* (30 percent): My 33 years of combined pharmacy and medical experience insist this song is getting old. "Side effects" are nothing more than rocks in the road to recovery that make the ride uncomfortable. They should not—but do—make the patient forget the disease being treated is far more dangerous than the side effects.
- *Thought the drug would not help* (31 percent): Obviously a failure of the patient, not the prescriber. In this case there is never a practical, let alone a factual or scientific basis, for making this error in judgment.
- *Condition improved* (21 percent): Reflects the microwave mentality of our culture. When the soup is done, turn off the heat; never mind keeping it warm for continued use. Just blast it with high heat when you want to eat it later. Same philosophy persists about hypertension, diabetes, hyperlipidemia, or any number of chronic diseases—in spite of what we preach.
- *Something read or heard* (seven percent): This generally falls into the "Dr. Gott says" category whereby if I don't agree with the newspaper article, I must be wrong. If I do agree, it confirms the patient's belief the visit was wasted.
- *Confused* (five percent): A natural consequence of exposure to the unsolicited advice by well-meaning friends, relatives, paraprofessionals, and the nightly news. I'm surprised it's not more than five percent.
- *Cost* (six percent): At this low level of influence, why are people traveling to Mexico for medications, and why are we trying to change the entire health care delivery system in this country?

Carl J. Forster, DO
Pottsville

...a promise to defend...



HERE ARE THE FACTS: Over 25% of America's Physicians were embroiled in a malpractice issue in the last 12 months. More than 80% of those malpractice allegations will be closed without an award for damages. Your professional reputation and your personal assets are on the line when your professional liability carrier is not both financially sound *and* experienced in the law and the judicial system.

WHEN THE ISSUES ARE LEGAL, NOT MEDICAL-- when the allegations are frivolous, or highly emotional-- you need a company and legal representation that understands the problem and has the experience to resolve the issue. The Medical Protective Company has specialized in defending doctors since 1899. Our legal and claims management experience is unmatched by any other insurer in the U.S.

FOR MORE INFORMATION on how we can protect your professional reputation and your personal assets, call your local Medical Protective General Agent at 1-800-344-1899.

Legislative Preview:

Reform Remains Priority, Agendas Developing

With remembrances of a most unusual 1993 behind them, and certainly with health system reform in sight on the horizon, the General Assembly faces a challenging and busy 1994 session. As an added attraction, it is an election year for all 203 House members, 25 members of the Senate, the 21 members of the U.S. House, and finally, for the governor and lieutenant governor.

As the first two-year session concluded in mid-December, there were already indications that 1994 would be a year of surprises. The keystone will most certainly be the developing political and election agendas at both the state and national levels. Those, in turn, will evolve as politicos from both parties make their personal decision to step up and challenge for higher office, or even step out and seek the quiet of private life.

The domino effect is a political reality in Pennsylvania. Congressmen Rick Santorum (R-Allegheny) and Tom Ridge (R-Erie) have already declared their candidacies for the U.S. Senate and governorship respectively. Their seats in congress will certainly look very inviting to some state legislators from their areas.

State Representative Ellen Harley (R-Montgomery) and state Senator Stewart Greenleaf (R-Montgomery) have already declared their intent to challenge first-term Democratic Congresswoman Marjorie Margolies-Mezvinsky. If they stay in the race, Harley and Greenleaf would not only leave their respective seats open, but may also make the political career decisions of other Montgomery County Republicans very difficult.

In November, State Senator Bill Lincoln (D-Fayette) announced that he will not seek re-election in 1994. His move out of legislative politics means that the internal fight for his position as the Senate Democratic (Majority) Leader will probably overshadow the primary election battle to elect his successor in the 32nd Senate district. It would take a master gamesman to properly line up all of the dominos.

In contrast, the political events during the first week of December were even more astounding. Just a year ago the State Capitol was still reeling from Senator Frank Pecora's change from Republican to Democrat, virtually in the middle of an afternoon Senate session. His decision tipped the balance of power in the Senate toward the Democrats. Now, two House members have made a similar switch, although this time moving from Democrat to Republican.

Representatives Ed Krebs (Lebanon) and Pat Carone (Butler) announced their decisions to change parties in separate press conferences held the first week of December. By December 7, the Democratic margin in the House had closed to 103-100. Although the Krebs and Carone switches had not handed Republicans control of the House—as Pecora had done for the Senate Democrats—the potential for a change of power was imminent.

To add to the power struggle, two Democratic legislators are expected to resign soon. Representative Bob O'Donnell (Philadelphia) is leaving to campaign for governor, and Representative Tom Murphy (Pittsburgh) has been elected Pittsburgh mayor. By the end of this month, Democrats are expected to have a slim 101-100 majority. The special elections to fill the O'Donnell and Murphy seats are expected to keep them in the Democratic column.

Recurring themes

For physicians and the State Society, however, the committee votes and floor fights on health care issues will continue to be far more important than the power struggle. Health system reform will be a dominant issue, although tax reform is also high on the agendas of many legislators for the year ahead.

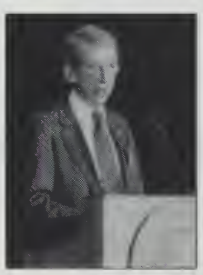
The one recurring theme surrounding health system reform is that legislators intend to act, but they are anxiously awaiting some sense of direction from the federal government. They recognize the issue is very serious and technical, and as a result are looking for a "once and done" shot at reform, which will probably come later rather than sooner.

Other legislative issues of interest to physicians and the Society will also be considered as the year progresses. From optometrists' use of therapeutic drugs, psychologists' continuity of care, physical therapists' direct access, and utilization review safeguards, to referral limitations, limits and rights of smokers, and HIV testing, the Society anticipates a busy legislative schedule in both the House and the Senate. Notwithstanding the myriad issues waiting in health reform, from insurance reform to quality of care, the normal press of medically related legislative business is not expected to abate. For example, a new bill has been introduced to remove the requirement that the secretary of health be a physician.

The Society as of this month had reviewed more than 3,500 pieces of legislation introduced by Senate and House members, and is actively lobbying on more than 250 bills! More bills are expected, some of which will hold great potential for a negative impact on the medical profession.

PHYSICIANS EXPRESS REFORM CONCERNS AT AMA FORUM

More than 400 U.S. physicians attended "Physicians' Forum: Agenda for Action," an AMA-sponsored meeting on health system reform,



Martin A. Murcek, MD (at left, top), president of the State Society, and Robert D. Reinecke, MD (at left, bottom), professor of ophthalmology, Jefferson Medical College of Thomas Jefferson University, Philadelphia, spoke at the AMA health system reform forum held in Pennsylvania in November. Dr. Murcek offered opening remarks, and Dr. Reinecke relayed his views of the health care industry.

held November 19-21, 1993, in Philadelphia. Four State Society physicians spoke at the forum, along with U.S. Senator Harris Wofford (D-PA) and other members of Congress, several government officials, and representatives of the AMA.

Coincidentally, the meeting was convened at the same time as the quiet introduction of President Clinton's health system reform bill—the main topic of discussion. The strongest fears voiced by physicians about the plan were: 1) it would hurt the current level of quality of care in the U.S.; 2) patient choice of physicians would be limited; and 3) government intervention would restrict physician autonomy. According to *USA Today* reporter Richard Wolf, "Finding boosters here [at the forum] of the Clinton plan...was nearly impossible."

Pennsylvania physicians speaking at the forum included: Martin A. Murcek, MD, State Society president; Donald G. Ferguson, MD, Society immediate past president; William S. Frankl, MD, Philadelphia County Medical Society president; and Robert D. Reinecke, MD, professor of ophthalmology, Jefferson Medical College of Thomas Jefferson University, Philadelphia.

The AMA sponsored two similar forums earlier in 1993 in San Francisco and Dallas.

Larry Light, the Society's director of legislative affairs, contributed to this page.

Physician Referral Networks Targeted:
A Warning and A Plea

House Bill 1497, a follow-up bill to achieve enforced access by Medicaid patients into physicians' offices, is troubling because of its heavy-handed, penalty-laden provisions. Sponsored by Representatives Allen G. Kukovich (D-Westmoreland), David P. Richardson Jr. (D-Philadelphia), H. William DeWeese (D-Greene), et al., it originated when House Bill 20 of the 1991-92 legislative session was transformed into a children's health bill, and the other parts of the original bill were resurrected piece-meal in the 1993-94 legislative session. As in House Bill 20, its approach is to require physicians to see "significant" numbers of Medicaid patients in their practice, but instead of tying it to licensure and fines for noncompliance, loss of hospital privileges and *big* fines for noncompliance are proposed.

The approach to establishing a system to ensure Medicaid patients' access has also changed. During the Society's participation in discussions about House Bill 20 in the past two years, 12 specific recommendations covering a wide range of access issues were proposed. One of those recommendations was to expand and improve physician referral networks (PRNs). The reasoning was:

- Almost all hospitals had physician referral systems in place to assure that patients seen in the emergency room would have access to follow-up physician care, inpatient and/or outpatient.
- Modernization of these existing referral systems through computerization and centralization, as had been done in a number of other states, seemed very feasible and would answer almost every alleged problem in Medicaid patient access to physicians' offices.
- Records of referrals and follow-up care generated by the computerized PRNs would for the first time give the Pennsylvania Medical Society hard proof of physicians' existing responsiveness for care of Medicaid and medically indigent patients. These records would also document patients who were "no-shows," physician shopping, and abusing the system—knowledge we will need in coming negotiations.

Representative Kukovich, et al., quickly seized upon PRNs as *the method* to assure Medicaid patient access to physicians' offices, clinics, etc.; but, instead of acceding to the Society's proposal to expand and modernize voluntary PRNs, the legislators incorporated into House Bill 1497 a mandatory approach with heavy penalties for non- or "inadequate" participation.

The Society will seek to defeat this bill or amend it to permit the Society to continue its program of establishing voluntary, physician-controlled PRNs throughout the state, and defer any mandatory system and penalties until, or in case, the voluntary PRNs are not effectively dealing with the problem.

Now, the plea! To strongly bolster the Society's position in coming negotiations with the legislature, we need to quickly and broadly expand the installation of computerized, physician-controlled PRNs beyond the current pilot programs into other areas of the state with a real or perceived access problem for Medicaid and medically indigent patients.

The systems, as installed by the Society from the individual hospital medical staff level to whole counties, have been successful with one caveat—they are so easy and quick to use that they have invited some abuse by overuse beyond the safety net for Medicaid/medically indigent patient access for which they are primarily designed. Because these systems are physician controlled, physicians can readily control overuse by simply paying attention to the PRNs' records of use and cracking down on individual physician members who try to use the system to inappropriately shift Medicaid/medically indigent patients or use the system to refer all such patients. Fortunately, such abuses have not been common, and the equitable distribution of Medicaid/medically indigent patients referred by the computerized PRNs is well liked by participating physicians.

Please consider looking into the Society's PRN system if your current physician referral system does not generate the hard copy data we need to show the legislature that voluntary physician-controlled PRNs can do the job without heavy fines and loss of clinical privileges mandated by the state!

For more information on what PRNs are and how they work, refer to "Helping the Medically Indigent and Underserved," in the February 1993 issue of PENNSYLVANIA MEDICINE.

The author, John A. Malcolm Jr., MD, a pathologist from Lewisburg, is a member of the Society's Task Force on Health System Reform and Access, and physician representative on the Pennsylvania Health Care Cost Containment Council.

PAMPAC: Advancing the Goals of the Medical Profession

Andrew W. Gurman, MD

The Pennsylvania Medical Political Action Committee (PAMPAC) has become a recognizable and effective organization in state and national political arenas. In this article, PAMPAC's chairman answers often-asked questions about the Society's PAC and political action committees in general.

In today's health care environment, government is an important part of the practice of medicine. Every medical decision that we make is shaped by current health care policy, from deciding which lab test to order for a patient, to making a referral for treatment or care of a patient. Because someone other than a medical authority is often influencing these medical decisions, it is more important than ever that physicians, as members of the medical community, take on the aggressive role of patient advocate. To be an effective force in government, you must become an active force in politics.

Why a medical political action committee (PAC)?

There are many special interest groups in the political arena, all vying for attention. As each interest group speaks out on its own behalf, only a unified force made up of physicians and their spouses can best represent the interests of the medical community and, most importantly, those of our patients.

The Pennsylvania Medical Political Action Committee (PAMPAC) is part of a national system of medical PACs. Joining PAMPAC offers each individual a convenient, time-effective means to become involved in both state and federal legislative races, and allows each physician to speak with a powerful, amplified voice.

PAMPAC works on behalf of the *entire* medical profession, enabling physicians to speak with one voice and expand the influence of the medical community in the increasingly complex political world. When you join PAMPAC, you also become a member of the American Medical Political Action Committee (AMPAC). In this way you are also involved nationally with the selection of candidates friendly to medicine.

Direct financial support is one of the most visible tools PAMPAC uses to represent physician and patient issues in the political arena. The PAC offers direct support to candidates running for state or federal office. Direct financial contributions, while an essential part of political involvement, are only the beginning. Financial support of a candidate *in conjunction with your personal campaign participation* make for a potent political power.

Whom does PAMPAC support?

Our highest priority is to support friendly incumbents. We seek to find and support friendly candidates in open races where no incumbent is in office, and we offer help to friendly candidates challenging unfriendly incumbents.

Decisions covering PAMPAC support for a candidate are made by its Board of Directors, composed of one physician from each of the 13 State Society councilor districts, five at-large physician members, and three Alliance (formerly called the Auxiliary) members. PAMPAC members may participate in the contribution decision-making process by contacting a member of the PAMPAC board, listed in the Society's "Resource Guide."

What is the purpose of PAMPAC?

PAMPAC's purpose is three-fold:

- to assist physicians and others in organizing themselves for more effective political action and in carrying out their civic responsibilities;
- to promote and strive for the improvement of government by encouraging and stimulating physicians and others to take a more active and effective part in governmental affairs, and
- to encourage physicians and others to understand the nature and actions of their governments as to important political issues, and as to the records of office holders and candidates for election to office.

Dr. Gurman, an orthopedic surgeon from Altoona, is chairman of the Pennsylvania Medical Political Action Committee.

What does PAMPAC do?
The PAC's activities are varied, including identifying and contributing to friendly political candidates, as mentioned; sponsoring political education seminars; supporting State Society lobbying efforts; and working with the Alliance to identify and support individual political campaigns.

In addition to candidate support, our federal-level PAC, AMPAC, is extensively involved in data collection on voter demographics and opinions. Polls conducted for candidates include several questions on public health policy.

Why is PAMPAC essential to your practice?
Each and every member of the medical community benefits from PAMPAC's success. Decisions made within the political arena continue to have significant impact on the daily management of your practice. It is essential that you have an effective voice in influencing the outcome of those decisions. Today's health care environment may be in a state of flux, and the political environment might well be complex, but PAMPAC's goal remains constant: To advance the high standards and practices of the medical profession.

By law, all funds used for candidate support must come from personal contributions. Corporate checks may be used for educational activities only. Contributions to political action committees are not tax deductible.

Your PAMPAC contribution, membership, and subsequent participation in the political process are really an investment—in the medical profession, in your patients, and in the nation's health care system. *Your membership is critical. PAMPAC needs your support, and you need PAMPAC's active political involvement to protect your practice and patients.*

Positive Thinking in a (Too Often) Negative Environment

Leif C. Beck, LLB, CPBC

With the uncertainty surrounding the future of medicine, we might fear that no one will be drawn to the profession; yet, statistics show that medical school enrollments continue to rise. In this article, we look at the choices, constants, and bottom line of joining the profession.

There is no question that medicine is changing rapidly. Physicians range between nervous and paranoid about the changing times, especially as they compare the new picture to their "golden era" of practice in the 1970s and 1980s. The sense of negativism among doctors is both pervasive and unfortunate.

Indeed, private practice may never again be as personally and financially rewarding as it was in those years gone by. Too many physicians react to the change with great frustration, making certain statements a common litany. We hear almost daily, "Medicine just isn't fun any more," and "I can't wait to get out of practice," and "I hope my children don't become physicians."

Still the best choice

But wait! We have heard these same comments for upwards of 10 years. The doctors making them have, by and large, continued to practice successfully beyond their—and our—expectations. If finances are the measuring device, our preferred barometers of successful practitioners' incomes continued to rise even into 1993.[1] The widely predicted income decreases seem to remain tauntingly just ahead, but, for most doctors, not quite yet upon them.

In the meantime, thousands of newly trained physicians have continued to enter the profession. They knew it would not be like it was in the '70s and '80s, but they chose medicine anyway. Medical school applications remain startlingly high because medicine is still the best career choice for many bright, capable people.

Pessimistic doctors too easily overlook the issue of choice. Would they trade places with their lawyer friends, preferring a profession fraught with self-doubt and turnover far beyond what we see in medicine? Or, with architects who are struggling to hold and keep their jobs in a 10-year building bust? Or, with their executive friends, whose industries—from manufacturing through banking—lay off capable people in their rampant "downsizing?"

In the larger picture, perhaps physicians' grass is less green until they look more critically at the other side of the fence!

Zero base change

We see the negativism more as a product of radical change in the health care system than as an absolute indictment of medical practice. But change is part of life. Both for individuals and organizations, things keep evolving; patterns once comfortable shift with time whether we like it or not.

Industries periodically undergo basic change. Such "zero base change" is necessary for an industry to remain effective as all about it changes. No one doubts that health care is in a zero base change period, and this obviously affects physicians.

Change is rarely comfortable. Few successful people would voluntarily put at risk what they know, and benefit by, in exchange for what is unknown. It is easy to think negatively in that environment.

And yet, since change is both inevitable and beneficial, it behooves us all to deal with it. Successful people welcome and manage change effectively, and doctors are now presented with that very opportunity. In fact, at a recent health care conference, a renowned clinic leader identified "Seven Propositions for Success" by relating them to change.[2] Four of them particularly relate to this article's themes:

- Change is learning—loaded with uncertainty.
- Change is a journey—not a blueprint.
- Problems are our friends—welcome and work with them.
- Change is systemic—it goes to the core of what you do.

Mr. Beck is founder and chairman of The Health Care Group, a medical practice management consulting firm based in Plymouth Meeting, and founder and publisher of "the Physician's Advisory," a national monthly newsletter for physicians. He graduated from Duke University School of Law and is a former Wharton School of Business instructor.

"Art" or science?

Physicians object that the "old system" treated their patients best. On a one-to-one basis, that may be true. It overlooks, however, newer factors driving the reform movement. These factors are so powerful that they will not go away; we will have to adapt to them.

The most profound change is in the rapidly accelerating information flow. Medicine has been generations behind other disciplines in electronically developing and using data. Thus, physicians have been able to defend their patient care as part of the "art of doctoring," which was personally comfortable but technically uncertain. In this new era, computerized information systems may tell a physician that 99.4 percent of symptoms like his or her patient's indicated a certain condition, and that 81.2 percent of them had successful outcomes with a certain therapy. Though less "artful," such data will surely help physicians even more effectively treat their patients.

Computerized information technology also gives rise to sophisticated cost monitoring. The current annoyances of utilization review (both prospective and retrospective) are merely a phase as doctors and their physician-controlled networks move towards real synergy between their decisions, probable outcomes, and related costs. The way some large medical groups now study these relationships in setting treatment policies—like for angioplasties and PSA tests—shows that medical practice is constantly improving.

The old system allowed superb one-on-one care because someone else was paying for it. Since the mid-1980s, though, those "deep pockets"—primarily employers and government—have insisted on limiting their outlays. While their insistence fuels health system reform these days, it presents physicians with a whole new set of *opportunities* along with the burdens.

Several constants

With all this change, a natural part of life, there remain several constants. One is that the U.S. population continues to need physicians and their skills. The demand for diagnosis, treatment, cure, caregiving, and health maintenance will not go away, and it will always be physician-centered.

Doctors' business will thus not wither away, but will in fact grow. While physicians equate reform with lower reimbursement, incomes remain generally favorable, and new approaches, like capitation, offer new opportunities. No one, by the way, expects physicians to be less than among the highest of all occupations.

Another constant is that medical practice continues to be a unique way to combine technical challenge with service to others. While paying well, it provides personal activity deserving—and getting—respect which lawyers, bankers, and business people cannot even approach. With all the frustration of these changing times, the underlying reality of the physicians' role in society is the greatest positive of all.

The bottom line

Several years ago, a physician made this point clear in a guest article in *AMA News*. Richard E. Waltman, MD, said:

"Of course there are hassles, frustrations and problems. Every one of us has thought about quitting. But let's be honest: What could be more challenging, rewarding, and fun than practicing medicine? Drywall tapping? Arbitrage?"

"Even if things get worse, I am convinced that medicine will still be a most enjoyable vocation. The coming years will bring new difficulties, but also new challenges. Tell me how I can do a better job, face the future, deal with the problems, get more satisfaction. Don't suggest I give up."

"...For every four articles that tell me how badly I am doing, and how bad it will be, I want one that says how great it is to be a doctor. I also want at least one that reminds me to kiss my wife, hug my kids, smell some flowers, watch a hawk circle, and give thanks for all I have."[3]

And Pennsylvania's own famed former pediatric surgeon, C. Everett Koop, MD, summed it up so well in this very journal some eight years ago:

"I envy those starting a career in medicine. I regret some things that are going on—lack of good doctor-patient relationships, the preoccupation with money and power, the growth of regulation, and so on. But I also know that medicine still offers the individual one of the most satisfying ways to make a life that I have ever encountered."[4]

These are the real positives in an environment of exciting, though threatening, change.

"With all the frustration of these changing times, the underlying reality of the physicians' role in society is the greatest positive of all."

Notes and references

NEW CABG REPORTS INCLUDE PERCENTAGES AND ODDS

The Pennsylvania Health Care Cost Containment Council's (PHC4's) physician-specific coronary artery bypass graft (CABG) surgery reports arrive this month with a few additions to both the Consumer Report and the Technical Report sections.

The reports are primarily based on 1991 CABG surgery data, but surgeons and hospitals will also see their 1991 data matched against their previously published 1990 data in the Consumer Report. The comparative data will include the number of patients treated and statistical rating of patient mortalities for each surgeon and hospital.

Additions to the Technical Report include percentages of mortalities of CABG surgery patients at each hospital (actual, expected, and risk-adjusted) to make the report's mortality statistics more readily understandable. There will also be a comparative analysis of in-hospital mortality related to the use of vein grafts versus arterial grafts versus combined vein and arterial grafts by each surgeon, surgical practice group, and hospital.

Both the Consumer Report and the Technical Report will list patient risk factors affecting in-hospital mortality, but with different approaches for explaining their impact. Not surprisingly, PHC4's 1991 CABG surgery research results showed that the significant patient risk factors correlated with increased in-hospital mortality for CABG surgery patients are:

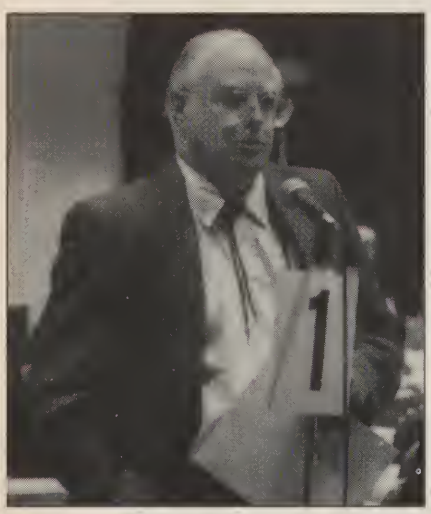
- increasing patient age,
- increasing severity of illness at admission,
- female gender,
- presence of cardiogenic shock,
- presence of congestive heart failure,
- presence of acute renal failure and/or renal dialysis dependency,
- presence of diabetes mellitus,
- history of recent acute myocardial infarction (less than eight weeks), and
- history of previous CABG surgery.

In the Technical Report, the average effect of each of the patient risk factors will be reported in the form of an odds ratio so that users of the data can better see how much, on average, each risk factor raises the odds of patient mortality when undergoing CABG surgery.

Aside from the above changes and additions, and inclusion of an explanation of how expected numbers of patient mortalities are determined, most of the reports' final format and text will closely resemble the 1991 data reports.

I suggest that each physician request a copy of the Consumer Report *and* Technical Report to get an idea of how and what they are about. There will be another physician-specific report in 1994, and it may well include you, depending on the medical diagnosis related groups (DRGs) selected as the subject of the report.

John A. Malcolm Jr., MD, Physician Representative, Pennsylvania Health Care Cost Containment Council



John A. Malcolm Jr., MD, physician representative to the Pennsylvania Health Care Cost Containment Council (PHC4), offered his expertise to the Society's House at its annual meeting last October.

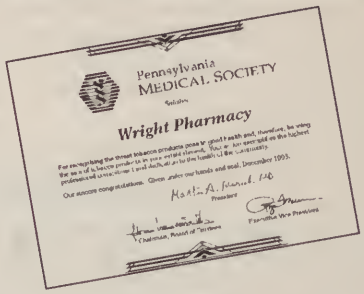
PHARMACIES RECOGNIZED FOR ANTI-TOBACCO EFFORTS



A recent statewide public opinion poll commissioned by the State Society revealed that nearly 60 percent of Pennsylvanians believe that those who smoke should pay more for their health insurance. The Society agrees.

The association has been involved in a number of public health projects to educate Pennsylvanians on the dangers of smoking and urge them to quit, including a program to recognize pharmacies which don't sell tobacco products.

In 1993, nearly 100 pharmacies throughout Pennsylvania were recognized, up from more than 60 pharmacies in 1992.

"It's hypocrisy," says Society President Martin A. Murcek, MD, a Greensburg allergist. "Pharmacies that sell tobacco products have shelves and shelves of products that, when used as intended, help people. Tobacco is the one product that, when used as intended, kills people...So, my hat's off to these pharmacies which have decided to sacrifice profits and do what is right."

Estimates are that smoking-related health costs are $22 billion per year. Lost wages and other expenses attributable to smoking add another $30 billion to the cost of smoking, putting the total estimated cost to the entire nation at $52 billion per year.

"It has been estimated that 80 percent of all patients we see in our offices are there because of 'self-inflicted' behaviors," Dr. Murcek says. "As a society we smoke too much even though we know the importance and value of being healthy. But many of us ignore what we know, and our health care expenditures reflect it."

For additional information about the Society's Tobacco-Free Pharmacies Program, call the Society's Department of Public Affairs at (800) 228-7823 or (717) 558-7750.

The P·I·E Mutual has now entered the state of Pennsylvania. And whenever we come into a state good sense comes along, nonsense exits. Stability returns to the medical liability insurance market. In eight states 15,000 of our member-insured doctors have been enjoying the new cost climate. Protected by one of the largest medical professional liability monoline insurance companies in America. And defended by a firm of medically savvy litigators who close over 75% of cases without payment. And, year in and out, win nearly 80% of cases that go to trial.
For information, call 1-800-228-2335.

Help for the Homeless: *One Town's Solution*

Gwendolyn L. Schultz

Family practitioner and certified addictionist William Santoro, MD, is medical director at both Albright College and the Reading Hospital Medical Center's Drug and Alcohol Detoxification Center. He also volunteers his time and medical services at the Reading Emergency Shelter, a homeless shelter in downtown Reading.

According to the Pennsylvania State Data Center, there are now 8,541 guests† in homeless shelters and 809 homeless persons on Pennsylvania's streets. Help for the Reading area's homeless began in 1984, when a small group of volunteers began roaming the basements of Berks County churches in search of shelter facilities to aid the homeless. After two years of shifting shelter locations, these volunteers established a public, non-profit organization, purchasing and renovating a downtown building on Second Street. The Reading Emergency Shelter opened its doors in the fall of 1987.

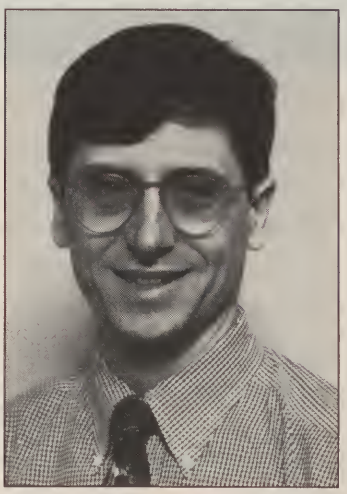
The homeless receive aid

Dr. William Santoro's first exposure to the homeless was in New York City. As he traveled the subways in the early mornings for his surgical rotation during medical school, homeless persons would often wish him well from their resting places in the corners of subway cars. After setting up his Reading practice in the early 1980s, he heard about the "migrating shelter" organized by volunteers and decided to volunteer what he thought would be most valuable—his time and skills. "Really," he says, "my time was more valuable than any money I could offer."

One evening he went to the area church which was serving as that week's shelter and asked the other volunteers if he could walk around and offer his services. He brought a stethoscope and blood pressure cuff to help those who needed medical attention. Another volunteer was also providing medical care, so the two decided to meet weekly and care for the homeless. As the needs grew, so did their efforts.

Medical services at the shelter

Dr. Santoro is now one of 10 physicians who volunteer time to administer basic medical care to the Reading shelter's guests every Wednesday evening on a rotation basis. Other physicians, including a pediatrician and an ophthalmologist, are "on call" to provide their services as needed. Dr. Santoro says, "It is nice to know that we have specialists available who will accept patients on referral in their offices with no charge to the patient. It is helpful because now we are not just an island in and of ourselves."



Dr. Santoro

A social worker is available daily at the shelter to set up medical appointments and complete a medical chart for patients. The worker records vital signs, history, and medications the patient is taking, and, if necessary, schedules a Wednesday evening appointment. Dr. Santoro has given the shelter permission to call him anytime in an emergency.

No controlled substances are permitted in the clinic, a policy which has been strongly publicized from the beginning to deter thieves from breaking into the shelter. But the lack of prescription medicine has not posed a problem for Dr. Santoro and the other physicians. Dr. Santoro says, "A lot of times I'll go to the cabinet and I'll say,

†*People who use the Reading shelter facilities are referred to as "guests."*

Ms. Schultz is assistant director of marketing and development for the Society's Educational and Scientific Trust.
This article is one in a series sponsored by the Trust's endeavor to address public health needs, Keystones of Public Health.

'Now, I know what I want, but what have we got?' So it's a little bit of the M.A.S.H.-type of syndrome: You work with what you have and make the best of it."

He hopes the shelter will expand one day to include mental health and gynecological exams.

Guests are everyday people

As Dr. Santoro speaks of the homeless, he stresses that they are no different from anyone else. He recalls that one evening he decided to snap a few pictures of the staff and guests for a slide presentation he was giving. He asked permission to photograph a person whom he thought was a shelter guest, but discovered that the person was a staff member. He also decided to include a picture of his own children with the shelter's young guests in the presentation. "You couldn't pick my kids out from any of the other kids. Not just because my kids are naturally a little scruffy, but because they are just kids. The guests look like the staff members, and the staff members look like guests. They [the guests] look like everyday people."

Goals and hopes

The Reading shelter's goal is to get homeless persons back on their feet and back into the system. "This is ground zero here. We gather the pieces so that they can move on and put them all together."

When asked why he is involved with the homeless, Dr. Santoro says, "It makes me feel good, and I enjoy it. It also gives me a better perspective of why I got into medicine—to help people. I'd like to see others donate their time, and if not their time, then donate money to help the efforts. I think we have an obligation to help those in our society. If you want to see something happen, do something in your community. You'd be surprised at the impact you can make just by calling and saying you can stop by with a stethoscope!" ⬡

"You'd be surprised at the impact you can make just by calling and saying you can stop by with a stethoscope!"

—Dr. Santoro

Additional Facts About the Reading Emergency Shelter:

- Bill Sunderland is the shelter's executive director. The staff also includes a business manager, a coordinator of social and rehabilitation services, two social workers, an operations manager, a secretary, and 15 shelter employees who work during the evening to morning hours.
- The shelter has a capacity to house 100 men, and 44 women and children.
- The shelter is open from 5:00 p.m. to 8:00 a.m. from April 1 to October 31. During the coldest months of the year, November through March, the shelter is open 24 hours a day.
- There is a 30-day overnight stay limit for the six-month period from April to October. From November to March, staying time is unlimited.
- All equipment—including the beds, furniture, and medical supplies—is either used or donated.
- The center is not officially affiliated with any organization. The funds to support the shelter come from grants and contributions from a variety of local businesses, churches, individuals, and service clubs.

Services of the Shelter:

The Reading Emergency Shelter has five general services:

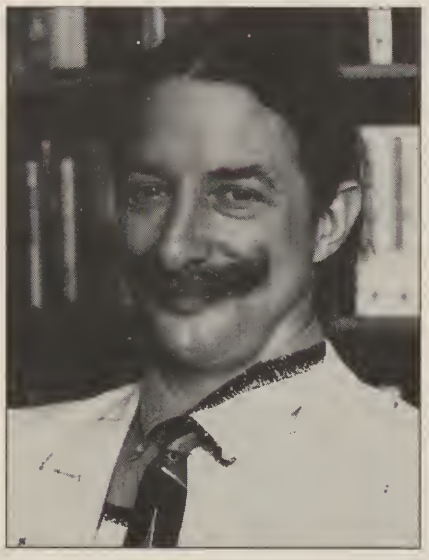
- *Emergency services for each guest*—Includes dinner and breakfast, a shower, laundry facilities, and a bed in a safe environment.
- *Medical services*—Basic medical assistance is provided with a limited supply of prescription medicine.
- *Social and rehabilitation services*—With the support of two full-time social workers, the shelter prepares the homeless guests for independent living.
- *Day programs*—During the coldest days of the year, November 1 to March 31, education services, recreation projects (arts and crafts, video games, etc.), and service programs are offered.
- *"Homeward Bound"*—Offered for guests who are ready for independent living. A sponsor supports the individual by providing the first month's rent on an apartment, furniture, bedding, and kitchen utensils. The individual must have secured employment before entering the program to ensure that he or she will be able to continue the rent payments after the sponsors' support ends.

A Pie in the Face of Greed

Fred D. Baldwin

Though every physician has his or her own way of treating patients, Hunter D. "Patch" Adams, MD, has an approach all his own: He uses clowning to break the barriers of practicing medicine. In a recent Central Pennsylvania appearance, Dr. Adams discussed his approach, as well as the importance of compassion in medicine.

You'd notice Hunter D. "Patch" Adams, MD, even if he weren't on a speaker's platform. He stands six feet, four inches tall, sports an upturned handlebar mustache, and ties his almost waist-length ponytail with rubber bands. A minute or so into his remarks, he takes off his jacket to give the audience a better look at his shirt and tie, a kaleidoscopic flash of Day-Glo colors. Then, after a few semi-solemn remarks about endorphins ("for the doctors who're getting CME credits for this"), he takes off his shoes and pants, revealing a pair of billowy pink bloomers.



Dr. "Patch" Adams

Warming to his work, Dr. Adams soon pops on a rubber nose and a hat topped with a rubber duck. He urges the doctors in his audience to try wearing their underwear *outside* their suits and to ponder the therapeutic merits of whoopee cushions. In the pauses between laughter, he talks about why he treats patients for free, about why he doesn't carry malpractice insurance, and, repeatedly, about the importance of compassion in medicine. "The true reward in medicine," he says, "isn't money or awards. It's the ecstasy of human intimacy we get with a patient."

Dr. Adams, who sees clowning as an integral part of his practice of medicine, spoke in Harrisburg in October on "Humor in Health Care." The audience was a group of 270 doctors and other guests attending the second annual dinner symposium honoring the memory of Frederick D. Curcio III, MD, sponsored by the Department of Obstetrics and Gynecology, Harrisburg Hospital.

"I have spent all my adult life misbehaving," Dr. Adams says, as he describes his evolution into what one publication has called the "Court Jester of Modern Medicine." He says his father died when he was 16, and a few years later, an uncle who had become a surrogate father committed suicide. After he himself had made a suicide attempt, he arranged for his own admission to a mental hospital. There he met patients far more lonely and depressed than he and "decided to spend the rest of my life as a joyful person."

After graduation from the Medical College of Virginia, Richmond, in 1971, he and a group of like-minded rebels against what he describes as "medicine as a business" founded a communal health care center in which medical doctors, nontraditional practitioners, and their families ("20 adults and two children") not only worked together under the same roof, but shared meals and shelter with patients. The center, ultimately christened the Gesundheit Institute, dispensed medical services free of charge, declined third-party payments, and carried no malpractice insurance. The staff survived by jobs and from donations, including gifts of food and services.

Despite a grueling schedule and almost total lack of privacy, no staff member left the center for nine years, says Dr. Adams. The group still enjoys remarkable stability and manages to avoid staff burnout. "Why is that?" Dr. Adams asks. "We are *fun* to play doctor with. We created the first silly hospital in history."

In a recent book, *Gesundheit!*, Dr. Adams writes that malpractice insurance is unnecessary when patients think of a

Mr. Baldwin is a freelance writer from Carlisle.

doctor as a specially trained but fallible friend who is doing his or her best to help. He also insists that both malpractice insurance and third-party payments create unnecessary distance between doctors and patients.

Asked about health system reform, Dr. Adams says that the reforms he has in mind are more fundamental than changes in delivery and payment systems. "The scariest thing about Clinton's package, if it passes, is that we'll say, 'Well, we've covered that problem. Now on to something else.' The health care delivery system is in shambles. There's not a happy hospital in this country. Medicine has the potential to bring a community together. People need to donate a significant amount of their free time to the community. It is an embarrassment to think the bottom line has anything to do with it. I want to be a pie in the face of greed."

"If the society were the patient and came to us, and we looked at the quality of life, the drug-use rate, the violence rate, and all those other rates, we'd say we've got an ICU case here. We are in a state of emergency, and the patient is the planet—our planet. We need a grassroots recreation of the human community, and humor is one of our tools."

In between comments like this, Dr. Adams puts a pair of jockey shorts on the head of a woman in the audience. He suggests to the doctors present that holidays would be a good time to experiment with wearing their own underwear on the outside as they make their hospital rounds or consult with patients. "You don't have to start with underwear," he tells a questioner. "If this seems too radical, on Arbor Day put a plant on your head."

Dr. Adams's audience stops laughing when he describes a Russian child with third-degree burns over 65 percent of his body, screaming with pain because his dressings had to be changed in a hospital that lacked anesthetics. Dr. Adams, embodied by his gentle but physically grotesque clown character, spent an hour-and-a-half at the child's side during the ordeal. Afterwards, the child whispered, "You're beautiful!" Dr. Adams says, "After I got on the bus, I broke down and sobbed for a very long time."

Such abrupt shifts between slapstick and seriousness seem natural, rather than jarring. In print and in person Dr. Adams comes across as a sophisticated man who understands perfectly well that not everyone shares his values, but who is convinced that to trade laughter for respectability is to strike a fool's bargain.

His own permanent clown *persona* is an innocent, or, as Dr. Adams puts it, "He's just too simple to understand, 'We don't do that.' " Dr. Adams settled into this character after a period of work with profoundly retarded adults and experiencing "their unconditional love." He has carried this second identity as a "holy fool" (a notion found in the classical Russian novels he admires) into hospitals and across national borders.

"I've gone up to Soviet policemen and taken off their helmets, put rubber noses on their faces, and then put their helmets back on. I've run that character for 10 or 12 hours at a stretch without getting out of it, and by the end of that time I don't want to."

To an objection that antics like his could cause patients to lose confidence in their doctors, Adams responds: "If you have compassion and sympathy, and your patients love you, you have no idea what you can get away with. I have gone to a dying patient's bedside dressed as an angel with a harp...and a sign saying 'Coming Attractions.' But I didn't do that as a stranger."

Dr. Adams, through lectures and sales of his book, raises money for a reincarnation of the Gesundheit Institute as a 40-bed free hospital in Pocahontas County, West Virginia, built around the message, "Good health is a laughing matter." It's clear that he believes that.

"Suppose," he says to his Pennsylvania audience, "you're being admitted to a hospital and have a choice between a 'Serious and Solemn Ward' and a 'Goofy Ward'...How many of you would choose the goofy one?" All around the room, hands go up.

"Higher!" Dr. Adams shouts. "Higher, so the administrators can see!" He shakes his head and says softly, almost as if to himself, "Almost everyone wants that, why don't they try it?"

Then, firmly: "I'm not really talking about rubber noses and big shoes, but a twinkle in the eye and a willingness to greet the world with a big hello. One of the most revolutionary acts you can commit in this society is to be publicly happy." ⬡

For additional information about Dr. Adams and his work, contact him at:

"I'm not really talking about rubber noses and big shoes, but a twinkle in the eye and a willingness to greet the world with a big hello. One of the most revolutionary acts you can commit in this society is to be publicly happy."

Medical Editor's Note: Hearty agreement with this—it's the secret of enjoying medical practice!

HCQII: Focused Review Enhances Analysis Efforts

Donald E. Harrop, MD

Because the Health Care Quality Improvement Initiative (HCQII) is so important to the new direction of the Keystone Peer Review Organization (KePRO), and because it represents such a departure from previous PRO activities, we will devote this page, over the next few months, to explaining some of HCQII's major components. This month we look at focused medical review.

As part of our new direction under the Fourth PRO Scope of Work, the Keystone Peer Review Organization (KePRO) has placed a new emphasis on data analysis and educational feedback to physicians and hospitals through its Health Care Quality Improvement Initiative (HCQII). One of the most important components of HCQII is focused medical review.

Focused medical review is completely different from what we called "intensified review" under previous PRO contracts. Focused medical reviews are used when there are medical conditions or procedures suspected of having variations in medical care delivery and/or outcomes. They may be used during the development of cooperative projects or as a part of pattern analysis, or they may be limited to the suspected variations in care, i.e., not requiring a "full menu" review such as necessity of admission, coverage, diagnosis related group (DRG) validation, etc.

Some HCQII cooperative projects are initiated based upon recommendations of the KePRO Steering Committee (formerly called the Master Committee) which provides advice to KePRO staff. A recommendation usually involves a particular medical condition or procedure that will improve medical care. A study group would then be formed comprised of professionals from throughout the state, KePRO staff, and three assistant clinical coordinators. Our assistant clinical coordinators are all academic physicians, each of whom holds a position as assistant professor at a university medical school in Pennsylvania.

KePRO staff may analyze Health Care Financing Administration (HCFA) analytic file data, KePRO claims data, and/or KePRO review data to investigate these particular issues. Claims data analysis may be enhanced by focusing medical reviews on those cases that appear to indicate use of a different process or result in outcomes unlike those of most other physicians and/or hospitals. This is not to say that different is necessarily bad. In fact, their process and outcomes may prove to be superior to those of most of the physicians and/or hospitals in the state. These are frequently referred to as "benchmark practices."

The next step is one of the more difficult jobs in the HCQII process—taking information learned from the study, communicating it to the provider community, and, of course, discussing it with those aberrant providers whose treatment process and outcomes are less than desirable, to help them better understand their practice and to work with them to provide more effective treatment.

Another important task is to get hospital medical staffs and administration to work together to solve any problems which may have been discovered from the study. This is done in a variety of ways, including onsite visits to hospitals by our principal clinical coordinator, assistant clinical coordinators, and/or KePRO staff; regional seminars; publications; and any other opportunity we may have to provide educational feedback to providers. Examples of publications that will be used are the "HCI Newsletter" and KePRO semi-annual reports. Both publications report on projects in progress and results of completed studies.

With less than a year of experience in HCQII activities, we are still in the learning process because the entire concept is relatively new. But that's part of what makes it so exciting, knowing the tremendous potential for improving health care delivery if we work hard and can get the cooperation of the medical community.

Dr. Harrop is president of the Keystone Peer Review Organization.

ou're on solid ground with the Dodson Plan.

More than 75 years ago, Bruce Dodson, Sr. pioneered the concept of the dividend plan for workers' compensation insurance. Dodson Group has been helping businesses like yours save on premium costs ever since.

The Dodson Plan gives you the opportunity to earn a dividend each year, depending on the claim experience of all insured members. We carefully select those who participate, creating the greatest potential for you to save.

Pennsylvania Medical Society endorsed the Dodson Plan in 1973. Since then, participating members have earned a total of **$2,309,240** in dividends. Share in the savings!

You're on solid ground with Dodson.

Our Area Of Expertise

Cancer crosses all cultures and all nationalities without exception. So it stands to reason that the treatment and eventual cure of a condition experienced worldwide would require talent and intellect from around the globe.

That's why the planners of The Arthur G. James Cancer Hospital and Research Institute, a National Cancer Institute designated Comprehensive Cancer Center, set out to staff this promising medical center with the top researchers in their field, wherever they might be found. Their search resulted in a respected team of renowned specialists from all around the world.

However, this search would never have been successful without a highly attractive institution. Designed to provide the optimum environment for the development and application of effective cancer treatments, The James houses remarkable research facilities within the same building as an equally excellent treatment center. Because the organization's

GENERATION OF HOPE

OVERS A LOT OF GROUND.

approach to research is so integrated, the lag time between laboratory breakthroughs and practical application is dramatically decreased. Collaboration between research teams and clinical specialists of the Comprehensive Cancer Center, which are composed of University graduate programs in chemistry, biological sciences, pharmacy and veterinary medicine, has enabled research efforts to advance efficiently while benefiting from the resources of one of the nation's leading University medical programs.

Beginning with the very first blueprints, The James was designed to provide researchers with the facilities, technology and opportunity to conduct their best work. Today, it is a reality that is dedicated to offering hope to the current generation of cancer patients as well as the promise of eradication to those in the future.

HCFA RELEASES 1994 MEDICARE CHANGES

The Health Care Financing Administration (HCFA) in late November 1993 released a fact sheet outlining changes in Medicare reimbursement for 1994.

As always, increases to the physician fee schedule reflect the OBRA '93 mandated reductions from the default update, which is based on inflation and performance under the Medicare Volume Performance Standard (MVPS). The following increases were released for 1994: 10 percent for surgical services, 7.9 percent for primary care services, and 5.3 percent for other non-surgical services. No inflation update has been made for ambulatory surgical centers.

Other changes include:

- reinstatement of separate payment for EKG interpretations;
- reduction of certain practice expense relative value units;
- repeal of new physician and practitioner payment reduction;
- a cap on payment for medically directed anesthesia services;
- expansion of the participating versus nonparticipating payment differential to drugs and to non-physicians;
- expansion of the limiting charge to drugs and to all services/supplies billed under the physician fee schedule regardless of the billing entity;
- new annual caps for physical and occupational therapy;
- reduction in payments for clinical laboratory services;
- fee schedule payment changes for durable medical equipment (DME), prosthetics and orthotics, and surgical dressings;
- new coverage for oral cancer drugs;
- coverage of "off-label" uses of anti-cancer drugs; and
- expansion of coverage of certified nurse midwife services.

Physicians who did not receive a copy of the fact sheet should contact their local Medicare carrier.

SOCIETY PURSUING STATEWIDE MEDICARE CHARGE CLASS

In October 1993, the Society's House of Delegates approved a resolution calling for the State Society to petition the Health Care Financing Administration (HCFA) for a single statewide charge class for determination of Medicare payments to physicians.

As a result, a petition requesting that Pennsylvania's current four localities be converted into a statewide locality is being prepared by the Society. The Society intends to file the petition by the end of January, a month prior to HCFA's deadline, to ensure ample time for consideration.

HCFA has stated that it will consider this type of request only if there is "overwhelming support" among the physicians in the state. The Office of Payment Policy (OPP), the unit within HCFA responsible for reviewing statewide locality petitions, has a number of requirements, including a list of the number of actively practicing physicians in the state by county and the number that are State Society members, and letters of support from the local societies which represent physicians who will experience a decrease in reimbursement under the proposed change. Optional letters of support are also accepted from specialty societies, medical schools, multi-specialty providers, legislators, and the Medicare carrier.

To date, only five states have been converted to a statewide locality—three (Minnesota, Oklahoma, and Nebraska) by legislative action, and two (Ohio and North Carolina) by regulatory action. HCFA has denied the petitions of Iowa, Oregon, Washington, and Wisconsin for lack of "overwhelming support," and in each case cited lack of support from physicians who would experience reimbursement decreases.

BILLING PACKAGE FREE TO MA PROVIDERS

EDS, the contractor for the Pennsylvania Medical Assistance (MA) program, has developed a new software package which it says will ease claims submissions for MA providers. Known as National Electronic Claims Submission (NECS), the package is free to MA providers.

Physicians with an IBM or compatible personal computer and a DOS operating system may use NECS to submit claims either by modem transmission (claims may be sent to EDS 24 hours a day, seven days a week) or mail-in diskette (data is submitted to the Department of Public Welfare for processing the same day it is received by the contractor).

Features of the package include:

- user-friendly data entry screens for all invoice types;
- help screens and tables that are interactive to improve ease and accuracy;
- provider, patient, diagnosis, and procedure code reference files which can be easily updated and allow physicians to "plug" data into the invoice fields;
- reporting for easy claim tracking and reconciliation;
- automatic backup for claim and reference files; and
- security features to provide protection of provider claim data.

EDS is also offering its Reformatter service to MA providers free of charge. The service allows physicians who use a computer system to track claims and who also submit hard copies of claims to send data to EDS for reformatting for electronic submission.

For further information, call EDS at (717) 975-6001.

Announcing something that should be close to every doctor's heart:

Crème de la Crème Vacations™ at fat-free prices.

As you can see from the listing below, the prices we charge for our European vacations are appealingly slim. But don't let that fool you.

The ingredients we include are very rich. (So rich, that other luxury tours using comparable ingredients sell for $1000 to $1700 more—per person!)

This information should do your heart good.

With so many people in Washington wanting to put a cap on what you earn, it gives you a chance to put a cap on what you spend—at least when it comes to your well-deserved vacation.

What you won't be putting a cap on is the superb quality of your vacation—even at these extraordinarily low prices.

For example, almost all the hotels you'll stay at in the major cities of Europe are beautifully-located, world-famous Deluxe hotels. Such as The Scribe, and The Prince de Galles in Paris. The Imperial in Vienna. The Europa and Regina in Venice. The Ambasciatori Palace in Rome. The Ritz in Lisbon. The Martinez in Cannes. The Miguel Angel in Madrid. The Ciragan Palace in Istanbul. The Hotel Normandy in Deauville, and many more.

But, although hotels are the most costly part of your vacation, they're still only a part. Which is why we give you a lot of other things that you'd otherwise find only on the most expensive vacations. Such as a big breakfast—buffet or American-style—every morning. And more than half your dinners—including dinners in major cities such as London, Paris, Rome, Athens, Istanbul, and Vienna. At dinner, too, we treat you the way our costlier competitors do: with table d'hôte menus that usually offer a choice between at least two entrees, and that always include dessert and coffee, at no extra charge.

For your convenience on touring days, we even include quite a few lunches on quite a few of our vacations.

We could go on and on. About the fact that, unlike other luxury tours, our vacations *include the cost of scheduled transatlantic flights*, and most of these flights are on the Crème de la Crème airline—AIR FRANCE. About all the sightseeing and entrance fees we include that many vacations sell as "options". About our thoughtful itineraries which always include stays of at least 3 nights in major cities and resorts, giving you more leisurely-paced vacations (not the constant packing and unpacking people experience on other luxury tours that take you by motorcoach from one 1-night or 2-night stand to another).

And our superb escorts, who tend to be more caring and attentive to the needs of our clients than those usually found on a lot of other tours.

These fine features certainly aren't lost on our customers (including those who are physicians). Year after year they keep coming back for more of our vacations.

Because whether we say it in French, or in English—or in Latin—they understand that we have the best vacations on the market.

At the best prices on the market.

These are our Crème de la Crème Vacations™ for 1994.

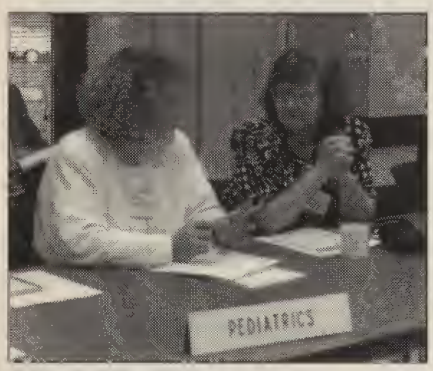
Specialty Task Force Aims at Partnership

As a result of a first-of-its-kind roundtable at Society headquarters in December, a task force with representatives from family practice, internal medicine, medical specialties, and surgical specialties is being formed to determine the best way to build effective partnerships between the State Society and specialty organizations on physician-initiated managed care strategies.

At the roundtable meeting, John Gannon, partner-in-charge of KPMG Peat Marwick's National Health Care Management Consulting Practice, presented a summary of findings from the study commissioned by the State Society to identify ways the Society can assist physicians as the influence of managed care increases in Pennsylvania. The more than 50 physicians and guests in attendance also participated in an open discussion session.

Participants generally agreed to support the development of a management services organization (MSO), and are creating the task force to report on how specialty societies and the Society could act as partners in the MSO. The task force will report to the Society steering committee, charged with the formation of a for-profit subsidiary.

Twenty-four specialties were represented at a rountable meeting on physician-initiated managed care strategies sponsored by the Society in December. Pictured are representatives of nuclear medicine, ophthalmology, orthopedic surgery, and otolaryngology.



Suzanne Yunghans (left), administrator of the Pennsylvania Chapter of the American Academy of Pediatrics, talks with Wilma Kellerman, MD (right), specialist in physical medicine and rehabilitation, during a gathering of specialty representatives at Society headquarters last month.

SOCIETY RELEASES 1993 PUBLIC HEALTH POLL

The Society's 1993 Public Opinion Poll, released at a news conference, focused on insurance and bioethics issues related to health system reform.

Society President Martin A. Murcek, MD, said the survey "explored tough questions at the heart of the health care debate that have not had the same scrutiny—questions that confront our basic beliefs on the importance of human life."

He emphasized that one of the Society's greatest concerns about some health system reform proposals is that they may limit the ability of people to choose their physicians and their coverage.

The poll showed that 72 percent of Pennsylvanians believe people should have the ability to choose from several basic benefits packages to meet their needs. And 86 percent said that people should be allowed to purchase supplemental insurance to cover medical services that might not be included in the basic benefit package offered under a particular reform plan.

Another Society concern is that reform may create more of a bureaucracy that takes away the ability of patients and their physicians to make the best medical decisions for the patients.

"There are a number of things wrong with our health care delivery system, but there are also those things that are right," Dr. Murcek said. "The doctor-patient relationship is one of the things that is the most right and one which reform shouldn't take away."

He noted that the survey showed that Pennsylvanians prefer a health delivery system focused on individual and personal relationships, as opposed to institutional decisions. He said it was most evident in the responses to questions where physicians would make decisions that limit care. For example, nearly two-thirds of Pennsylvanians still believe that a physician should be permitted to help end the life of a terminally ill patient.

"I think this points out the desire of people to make medical decisions in cooperation with their physician and not have those decisions dictated by a bureaucracy," Dr. Murcek said.

More extensive results of the survey were published in the December 1993 issue of PENNSYLVANIA MEDICINE, pages 38-39.

COUNTY NEWS

PHILADELPHIA COUNTY HONORS MEMBER PHYSICIANS

The Philadelphia County Medical Society (PCMS) on November 7, 1993, honored outstanding members of the Philadelphia medical community during its annual "black-tie-preferred" Awards Night, held this year at the Adam's Mark Hotel.

The highest honor of the evening, the Strittmatter Award, was presented to Edward S. Cooper, MD, for his commitment and outstanding contribution to Philadelphia medicine.

Dr. Cooper, a native of South Carolina, graduated first in his class from Meharry Medical College School of Medicine, Nashville, Tennessee. His Pennsylvania career began with an internship and residency at Philadelphia General Hospital.

He then served two years in the Air Force, but returned to the commonwealth as a National Heart Institute fellow in cardiology at Philadelphia General. After being certified in internal medicine, he remained as an attending physician at the hospital.

Throughout the years, Dr. Cooper also worked at Mercy-Douglas Hospital, and served as associate in and professor of medicine at the University of Pennsylvania School of Medicine. Since 1964 he has been an attending physician in medicine at the Hospital of the University of Pennsylvania. He has published more than 50 papers, many on hypertension and stroke, and served on the editorial boards of the *Journal of the National Medical Association* and *Stroke*. William Weiss, MD, a Philadelphia specialist in pulmonary diseases who has known Dr. Cooper since his internship, says Dr. Cooper is "an admirable physician and gentleman whose accomplishments merit [this] highest honor."

The Cristol Award for contributions to the county society's educational, scientific, and charitable goals was presented to Raymond Lodise, MD, a native of Philadelphia. Dr. Lodise specializes in internal medicine and cardiovascular diseases, and is active in the treatment of addictive diseases. He is an attending physician in the Department of Cardiology at Graduate Hospital, director of two treatment centers for addictive disease, and medical director of Continental Bank. Dr. Lodise has been an active, highly visible member of organized medicine since 1960.

Several other physicians and community members were also honored:

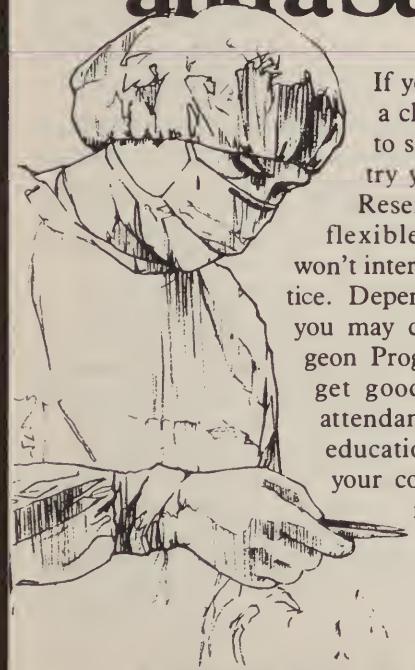
- Edward Gottheil, MD, professor of psychiatry and human behavior at Jefferson Medical College, received the C. Nelson Davis Award for excellence in research devoted to educating physicians regarding addictive disorders afflicting physicians.
- Charles R. Shuman, MD, emeritus professor of medicine, Temple University School of Medicine, received the Krasnoff Award for the Practitioner of the Year for dedication in the area of patient care and community service.
- Sara B. Kinsman, MD, Robert Wood Johnson Foundation scholar, University of Pennsylvania School of Medicine, and Michael P. Moulton, MD, senior resident in emergency medicine, Medical College Hospital, Main Clinical Campus, each received the Humaneness in Medicine Award for Resident Physicians for their skill in working with people and understanding human, as well as clinical, needs.
- The Breast Health Institute, a group whose major goal is fundraising to support worthy projects in all areas devoted to the eradication of breast cancer, received a Benjamin Rush Award for outstanding voluntary contributions to the health and welfare of the people of Philadelphia.
- Donna Howley, a Philadelphia City worker, also received a Benjamin Rush Award for work with and commitment to the city's child abuse services, including the Child Abuse Hotline.

YOUNG PHYSICIAN SECTION NEWS

NOMINATIONS SOUGHT FOR COMMUNITY SERVICE AWARD

The American Medical Association Young Physician Section (AMA-YPS) is accepting nominations for the its 1994 Community Service Award. The section represents physicians under age 40 who are no longer residents or fellows, or any age if within the first five years of professional practice. The annual awards program strives to recognize and encourage excellence in community service activities led by young physicians. →

An Officer and a Surgeon



If you're a surgeon looking for a change of pace and a chance to sharpen your surgical skills, try your hand in the Air Force Reserve. Serve part-time. Our flexible participation schedule won't interfere with your private practice. Depending on your experience, you may qualify for the Flight Surgeon Program. As an officer, you'll get good pay, benefits and paid attendance to continuing medical education (CME) activities. Serve your country. Serve yourself. For more information, call (609)667-4611 . Today's Air Force Reserve...it's a great way to serve.

610-678-9010 / Fax 678-5590

Community service activities implemented as a medical society project or by individual young physicians may be nominated. That would include, but not be limited to: medical/legal clinic for the homeless, a natural ambassador project, monthly health education cable TV show, pre-participation sports examinations for needy children, sample pharmaceuticals donated to clinics for the indigent, drug abuse prevention programs, volunteer activity at an AIDS clinic, involvement in medical missions to other countries, or flood/hurricane relief projects. The activity must have occurred during 1993 or 1994, or the individual must demonstrate a commitment to significant community service over a lifetime.

The AMA-YPS Governing Council will select award recipients based on:

- positive effect on a community or population;
- thoroughness of a program/project planning and implementation, and
- completeness/comprehensiveness of information submitted.

Depending on the number and quality of the submission, more than one award may be given.

Presentations will be made during the AMA-YPS Assembly on June 10-11, 1994, at the Chicago Hilton & Towers.

For additional information and official nomination forms, call the AMA Department of Young Physician Services at (800) AMA-3211. Entries must be postmarked by April 1, 1994.

NEW GRANT TO EXPAND CARE FOR UNDERSERVED

The Robert Wood Johnson Foundation (RWJF) is accepting applications for its new "Reach Out" program, which will provide up to $14 million in grants to organizations to develop and implement projects to expand the role of private physicians in caring for the medically underserved.

The program is open to organizations representing practicing private physicians, including local and state medical and specialty societies, large group practices, and hospital medical staffs that include office-based attending physicians. Applicants are encouraged to develop sustainable projects in line with community needs, resources, and local tradition. Target populations might include the uninsured, underinsured, or Medicaid enrollees, as well as special populations.

The program will consist of one-year developmental grants of up to $100,000 each to support projects in 40 to 50 communities. Grantees will then be eligible to receive three-year implementation grants that will average $200,000. While the funds may be used for a variety of support and start-up activities, they may not be used to pay physicians' fees.

For additional information and a grant application form, call H. Denman Scott, MD, MPH, at (215) 351-2740. Deadline for applications is March 14, 1994; recipients will be announced in August.

Thirty-two physicians and other health care workers attended "Tuberculosis: An Old Scourge Returns," a one-day conference held in November in Harrisburg. Addressed were the history, epidemiology, and pathophysiology of TB; current methods of screening and diagnosis; TB and HIV; and protection against TB transmission in the health care setting. Presenters represented the sponsoring organizations—the State Society, the American Lung Association of Pennsylvania, and the Pennsylvania Academy of Family Physicians—as well as the state Department of Health.

Clinical Scholars Program

RWJF is also accepting applications for the 1994 Clinical Scholars Program, "designed to allow young physicians committed to clinical medicine to acquire new skills and training in the non-biological sciences important to medical care systems."

The program offers two years of graduate-level study and research—as part of a university-based, post-residency training program—in priority areas designated by participating institutions. For instance, Johns Hopkins University School of Medicine, Baltimore, Maryland, offers training in organization and financing of health care, and evaluating health care practices and interventions.

For additional information about the Clinical Scholars Program, including a complete list of participating universities, priority areas, and eligibility requirements, call Sheila Libassi at (609) 243-5919. Deadline for applications is March 1, 1994.

PITT GIVEN GRANT TO OPEN REHAB RESEARCH CENTER

The University of Pittsburgh School of Health and Rehabilitation Sciences has received a five-year, $3.5 million grant to open a Rehabilitation Engineering Research Center on Technology to Improve Wheelchair Mobility at the University of Pittsburgh Applied Research Center, Harmarville. The grant was awarded by the National Institute on Disability and Rehabilitation Research of the U.S. Department of Education.

The new center will focus on three main areas of research: 1) improving the reliability and safety of manual and electric wheelchairs; 2) developing computer-assisted design and computer-assisted manufacturing technology for mobility devices, particularly for people with spinal cord injuries; and 3) developing national standards for wheelchair safety and transportation.

Staff at the research center are collaborating with staff at the Harmarville Rehabilitation Institute, Three Rivers Center for Independent Living, and the Rehabilitation Institute in Shadyside. They are also receiving input from a newly formed focus group of more than 30 people involved in mobility issues, to better understand how to improve mobility devices.

WE CAN'T DO IT ALONE

We invite all Pennsylvania physicians to join us in exploring the most urgent issue now facing our profession: the need to forge alliance with not only other health care professionals and organizations, but also with the community, business, and industry. This is the only way to assure not only the future of the practice of medicine as we know it, but also to assure your professional future.

Pennsylvania
MEDICAL SOCIETY
Caring physicians — working for you

1994 Spring Assembly

FORGING ALLIANCES ...
ASSURING YOUR FUTURE

April 19-20
Harrisburg Hilton and Towers

Please join us for this two-day, concentrated program offering:

- Keynote address by Richard F. Corlin, MD, president of the California Medical Society—a perspective from a leader not only in his state, but also in the national reform debate;
- Plenary sessions led by leaders in reform strategies predicting the shape of reform in the next months, years and decades;
- Nationally-known health care management experts advising physicians strategies for dealing with change and forming working groups within the new systems
- Workshops on the new information technologies, organizational options for medical staffs, financial planning for young physicians, contracting with managed care organizations, bioethics, effective contacts with legislators.

Mark your calendars now, and watch for details and registration information in your Society publications.

YOCON®
YOHIMBINE HCl

Description: Yohimbine is a 3a-15a-20B-17a-hydroxy Yohimbine-16a-carboxylic acid methyl ester. The alkaloid is found in Rubaceae and related trees. Also in Rauwolfia Serpentina (L) Benth. Yohimbine is an indolalkylamine alkaloid with chemical similarity to reserpine. It is a crystalline powder, odorless. Each compressed tablet contains (1/12 gr.) 5.4 mg of Yohimbine Hydrochloride.

Action: Yohimbine blocks presynaptic alpha-2 adrenergic receptors. Its action on peripheral blood vessels resembles that of reserpine, though it is weaker and of short duration. Yohimbine's peripheral autonomic nervous system effect is to increase parasympathetic (cholinergic) and decrease sympathetic (adrenergic) activity. It is to be noted that in male sexual performance, erection is linked to cholinergic activity and to alpha-2 adrenergic blockade which may theoretically result in increased penile inflow, decreased penile outflow or both.

Yohimbine exerts a stimulating action on the mood and may increase anxiety. Such actions have not been adequately studied or related to dosage although they appear to require high doses of the drug. Yohimbine has a mild anti-diuretic action, probably via stimulation of hypothalmic centers and release of posterior pituitary hormone.

Reportedly, Yohimbine exerts no significant influence on cardiac stimulation and other effects mediated by B-adrenergic receptors, its effect on blood pressure, if any, would be to lower it; however no adequate studies are at hand to quantitate this effect in terms of Yohimbine dosage.

Indications: Yocon® is indicated as a sympathicolytic and mydriatric. It may have activity as an aphrodisiac.

Contraindications: Renal diseases, and patient's sensitive to the drug. In view of the limited and inadequate information at hand, no precise tabulation can be offered of additional contraindications.

Warning: Generally, this drug is not proposed for use in females and certainly must not be used during pregnancy. Neither is this drug proposed for use in pediatric, geriatric or cardio-renal patients with gastric or duodenal ulcer history. Nor should it be used in conjunction with mood-modifying drugs such as antidepressants, or in psychiatric patients in general.

Adverse Reactions: Yohimbine readily penetrates the (CNS) and produces a complex pattern of responses in lower doses than required to produce peripheral a-adrenergic blockade. These include, anti-diuresis, a general picture of central excitation including elevation of blood pressure and heart rate, increased motor activity, irritability and tremor. Sweating, nausea and vomiting are common after parenteral administration of the drug.[1,2] Also dizziness, headache, skin flushing reported when used orally.[1,3]

Dosage and Administration: Experimental dosage reported in treatment of erectile impotence.[1,3,4] 1 tablet (5.4 mg) 3 times a day, to adult males taken orally. Occasional side effects reported with this dosage are nausea, dizziness or nervousness. In the event of side effects dosage to be reduced to ½ tablet 3 times a day, followed by gradual increases to 1 tablet 3 times a day. Reported therapy not more than 10 weeks.[3]

How Supplied: Oral tablets of Yocon® 1/12 gr. 5.4 mg in bottles of 100's NDC 53159-001-01 and 1000's NDC 53159-001-10.

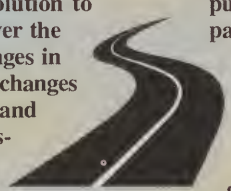
It's Time to Take Your Will In for a Checkup

You've taken care of everyone else. Now take care of yourself and your family. Make a resolution to pull out your will and review it. A lot has happened over the past twelve months including a few surprises - changes in family; changes in practice; changes in assets; and changes in health. Be sure your will reflects those changes and guarantees your family the future you desire. Estate taxes can be minimized, but you must act now. Appreciated assets need not be a capital gains target. If you anticipate gifts to medical charities in your will, you should also consider life-income instruments such as gift annuities and charitable remainder trusts.



To receive your free copy of **Is Your Will Obsolete?** simply clip this coupon and send it to Bob Lamb, Planned Giving Officer, The Educational & Scientific Trust, 777 East Park Drive, Harrisburg, PA 17105 or call 1-800-228-7823.

VISITING PROFESSORSHIP

Wednesday, February 2, 1994
8:30 - 12 Noon

"Cardiac Pearls for Office Practice"

with

PROCTOR W. HARVEY, M.D.
Professor of Medicine
Georgetown University School of Medicine
Washington, DC

LEONARD S. DREIFUS, M.D.
Professor of Medicine
Director, Division of Cardiovascular Diseases
Hahnemann University School of Medicine
Philadelphia, PA

•Grand Rounds and Clinical Case Presentations•

Each participant will use an electronic stethophone to complement the clinical case presentations and state-of-the-art lectures on cardiac auscultation.

This visiting professorship and workshop program is sponsored by a grant from the Edna G. Kynett Memorial Foundation specifically for the purpose of supporting Continuing Medical Education programs in cardiovascular disease targeted for *primary care physicians.* This support is gratefully acknowledged.

Seminar Director: Allan B. Schwartz, M.D., Professor and Vice Chair of Medicine, Director of Continuing Medical Education for the Department of Medicine.

Full Disclosure Statement: All faculty participating in continuing medical education programs sponsored by Hahnemann University are expected to disclose to the audience any real or apparent conflicts of interest related to the content of their presentations.

For information or registration: Call 215-762-8695.

Statement of Accreditation: Hahnemann University is accredited by the Accreditation Council for Continuing Medical Education (ACCME) to sponsor continuing medical education for physicians. Hahnemann University designates this continuing medical education activity as Category 1 of the Physician's Recognition Award of the American Medical Association. One credit hour may be claimed for each hour of participation by the individual physician for a total of 3.5 credits.

Location: Hahnemann University, Classroom C (Alumni Hall), 2nd Floor College Building, 15th Street between Race & Vine, Philadelphia, PA

Dealing with Pain-Related Disabilities: Non-Organic Components of Pain

David W. Florence, MD, MPA
Michael J. Asken, PhD

This article briefly introduces and reviews the "non-organic" components of pain-related disability situations, discusses the effect of the complexity of the problem on physician attitudes and behaviors, provides a description of the non-organic influences and their assessment, and makes suggestions for appropriate goals for intervening in pain-related disability conditions.

The impact of pain-related disability and work-related accidents for this county is staggering. Total costs of $47.1 billion from work-related accidents—with $8.1 billion in medical expenses, 60,000 permanent disabilities and 1.7 million temporary disabilities,[1] 1985 Social Security Insurance disability payments to 2.7 million disabled workers, and 1.2 million dependents at a cost of $1.5 billion per month—suggest the immensity of the problem.[2] However, work-related accidents and pain-related disability are not just a challenge for economic reasons or just for the industrial sector. They also pose a significant clinical challenge and *clinical quandary* for physicians and other health care providers who are asked to intervene in pain-related situations.

Much of the clinical complexity occurs because pain-related disability conditions are truly a biopsychosocial phenomenon. And while that term has recently been used optimistically to define a *comprehensive understanding of health and illness*, in the area of pain-related disability, it has often been seen as representing a clinical curse.

Florence has indicated that physicians are often confused by the relationship of psychological and physical components in pain-related disability, and has observed that, as a result, they may attempt to isolate themselves from the "non-organic" components of pain-related conditions and disability.[3] This stance is likely to become an increasingly untenable position, however, as physicians (especially primary care physicians) acting as gatekeepers to the health care system, will not be able to escape the subjective component in diagnosis, treatment, or determination of impairment and disability.

Basic considerations

As a result of the complexity of information resulting from various examinations of the biological, psychological, and social aspects of pain-related disability, many myths and misconceptions have evolved. Common myths include beliefs of increased depression in females compared to males with chronic pain,[4] ethnic differences in pain manifestations,[5] simplicity and consistency in cross-cultural responses to pain situations,[6] and intensifying hypochondriasis with advancing age.[7]

A second effect of the complexity and related myths is an impact on physician attitudes (predominately negative) toward such patients and conditions. Cunnien has commented on the resultant "plethora" of pejorative terms ranging from "compensation neurosis" to "green poultice syndrome."[8] Research by Barsky, et al. suggests that physicians' use of the term "hypochondriasis" is most closely related to their level of frustration with the patient.[9]

A further effect is that the foregoing may affect accurate perception and diagnosis. In fact, Hendler, et al. have recently reported that the overall rate of inaccurate or incomplete diagnosis in referred chronic pain patients involved in litigation may be as high as 66.7 percent[10] and that "psychogenic" diagnosis may often be present rather than a more appropriate organic diagnosis.[11]

Therefore, variability in information and attitudes are the backdrop against which "non-organic" components must be considered. Physicians, whether or not they feel sufficiently trained in this area, will be increasingly called upon to differ-

At Polyclinic Medical Center, Harrisburg, Dr. Florence is vice president of medical affairs, and Dr. Asken is a rehabilitation psychologist.

entiate or integrate physical and psychological components in pain-related disability situations.

Non-organic factors

Several potential non-organic factors may contribute to the total constellation of the pain-related disability mosaic. These factors—reactive responses, depression, conditioning effects, stress, personality effects, somatoform disorders, and environmental effects—should not be "isolated" from physical conditions. Instead, they should be understood and used as a therapeutic road map in fully understanding the patient, and not pointed to pejoratively or as an indication of invalid complaints. It is crucial to bear in mind Chapman's comments: "The era in which pain was regarded as x percent 'organic' and y percent 'functional' or 'psychological' (where x + y = 100) mercifully appears to be coming to an end."[12]

Reactive responses: Chronic pain from documented lesions can create a variety of reactions and emotional responses in the patient and family. Dworkin, et al. have observed that persistent pain translates into suffering and may be manifest in demoralization, affective disturbances, preoccupation with pain, limitations of personal, social, and work activities, frequent medication and health services use, and adoption of the sick role.[13]

Traumatic injuries may produce specific responses, ranging from fear of reinjury upon returning to work to post-traumatic symptoms, if not a true post-traumatic stress disorder.[14] The quality of the relationship between employer and employee may mitigate or fuel feelings of fear, blame, anger, or concern about retaliation for actions occurring by one party or another during the period of pain-related disability.

Depression: The relationship of pain and depression is clear, if complex. Persons with chronic pain-related conditions are depressed, depressed persons complain frequently of pain,[15] the number of pain sites is predictive of depression,[16,17] and depressed chronic pain patients have more negative thoughts than either non-depressed chronic pain patients or controls.[18] Also, depression may occur as a reactive response to pain-related disability, or it may proceed its onset and risk exacerbation.[19] In either instance, its assessment and treatment are essential, especially given that there is a small but meaningful relationship between depression and rehabilitation outcome.[20]

Conditioning effects: Behavioral psychologists have for some time reported the role of conditioning effects as factors in chronic pain and disability situations. Classical or Pavlovian conditioning has an influence through generalization of pain and distress to multiple situations, or through stimulus effects such as pill bottles on the nightstand.[21] Operant or Skinnerian conditioning can maintain pain behavior by environmental contingencies of sympathy/attention, relief from responsibility, or economic advantages. Such factors have been reported to affect activity levels, medication intake, and reports of pain.[22]

Cognitive behavior in the form of cognitive distortions and negative expectations are typically part of chronic conditions.[23] Such distortions have been associated with the degree of disability reported by chronic pain patients,[24] and reinterpreting negative conditions has yielded significant changes in improved ratings of quantity and intensity of pain.[25]

Stress: Though at times not a precise clinical or scientific term in its use, stress, in the form of anxiety or psychophysiologic responses, can result in musculoskeletal effects and discomforts as discussed by Florence.[26] The common perception of a cycle of pain and tension in chronic conditions[27] suggests the need for its interruption for effective intervention.[28] Biofeedback, muscle relaxation techniques, and other approaches provide a means to address such issues.

Personality effects: Interest in the role of personality characteristics in the area of chronic pain and disability has a long history. It is the authors' opinion that data from much of this work is varied, difficult to access and assess, and of more theoretical than clinical utility.

Some recent work in the area of coping types, such as the "hardy personality,"[29] may be helpful in understanding how persons deal with chronic pain, disability, and other major life stressors. The more traditional approach of trying to delineate certain personality types that are prone to develop certain types of illness has little empirical support; most related personality changes are now generally seen as the *result* of a chronic condition, rather than an etiologic factor in it.[30]

On the other hand, individuals with personality disorders do become injured, and their style can interact with their physical condition and other issues related to the chronic pain or disability situation. Therefore, familiarity with the American Psychiatric Association's "Di-→

"Much of the clinical complexity occurs because pain-related disability conditions are truly a biopsychosocial phenomenon."

agnostic and Statistical Manual, Third Edition Revised" (DSM-III-R), which provides descriptions and definitions of personality disorders, is important. The presence of an anti-social personality disorder, obsessive-compulsive personality disorder, or passive-aggressive personality disorder, to name just a few, can considerably complicate a pain-related disability situation and must be understood and addressed.

Somatoform disorders: The particular class of psychiatric diagnosis known as somatoform disorders is responsible for much of the confusion and frustration that often surround the chronic pain and disability experience. Somatoform disorders are defined by the presence of physical symptoms suggesting physical disorder for which there are no demonstrable organic findings or no known physiologic mechanisms. Additionally, there must be positive evidence that the symptoms are linked to psychological factors. Conversion disorder, hypochondriasis, and somatoform pain disorder represent this category and can also be found well-defined and described in the DSM-III-R.

While these disorders can be found in a population of disabled workers,[31] they must be used only where diagnostically accurate and not indiscriminately or by default. Somatization disorders can also present with co-morbid problems of depression and anxiety.[32]

Somatoform disorders must be differentiated from malingering or factitious disorders, where there is a conscious and deliberate intent to deceive for purposes of personal gain. While somatoform disorders create confusion for clinicians, it is malingering that fuels suspicion, anger, and negative attitudes that frequently exist toward these patients and situations. Rogers has provided indications of malingering and formalized them in *The Structured Interview of Reported Symptoms* in an effort to decrease subjective and variable approaches among clinicians toward this difficult problem.[33]

Several authors have raised cautions about the misuse of these diagnoses, one of which is differentiating malingering/somatoform disorders from defensiveness. Pain-related disability patients may have valid reasons for being guarded, doubtful, or even suspicious of evaluations and treatment motives. Also emphasized is that the use of such a diagnosis does not "dispose" of the case, but calls for further appropriate interventions.[34,35,36]

"Beale has emphatically argued that worker compensation laws influence the course of disease, access to care, diagnostic evaluation, treatment, response to treatment, and residual disability."

Environmental effects: The concept of environmental effects has also been used on pain and disability conditions in a broader, but related sense, to that of behavioral psychologists. Typical environments which influence "risk factors" for chronic dysfunction include family of origin, current family, the workplace, insurance and social welfare systems, and the health care system.[37,38]

For example, Gentry has noted the influence of family origin experiences as models for coping with pain and disability,[39] and Goodenow, et al. have reported the importance of social support as a major predictor of functioning in women with rheumatoid arthritis.[40]

Well-intentioned, but excessive or repetitive attention to complaints or the use of expensive diagnostics and workups by health care providers have been reported as factors in maintaining problematic conditions, as well,[41] and Florence has written that patients on multiple compensatory systems rarely respond to any type of treatment or rehabilitation, especially if compensation exceeds that obtained from working.[42] Beale has emphatically argued that worker compensation laws influence the course of disease, access to care, diagnostic evaluation, treatment, response to treatment, and residual disability.[43] To complicate matters once again, however, other work, such as that of Pelz and Merskey, failed to find significant differences in the behavioral patterns of compensation versus no compensation cases.[44]

Assessment of non-organic factors

The accurate assessment of non-organic factors in pain-related disability remains an urgent challenge to the field and a frustration for clinicians. While a description of all proffered approaches with their strengths and weaknesses is beyond the scope of this paper, some general guidelines can be offered.

Assessment of pain-related disability must begin with a comprehensive medical examination. Past diagnostics must be reviewed and utilized, but not repeated where unnecessary, nor should they be the basis for "snap decisions" about "career" disability patients.

Especially where there are inconsistencies between findings and function, but also in all pain-related disability situations, attention must be given to the potential contributions of non-organic factors. An interdisciplinary approach with emphasis on a comprehensive psy-

chological evaluation has been suggested as most effective.[45] A variety of psychological tests are available and can be used if carefully selected and used by professionals familiar with the idiosyncrasies of these tests in this type of specialized situation. Dworkin, et al. have suggested that more important than which test is used is how it is used. They especially support the need for repeated measures or observations,[46] in the same manner that no physician would rely on a single blood pressure reading to diagnose and treat hypertension.

Managing the disability

It is clear that pain-related disability has earned the appellation of the disease of the "Ds": dysfunction, disuse, dramatized complaints, depression and demoralization, disability, and drug misuse. Nonetheless, it remains an area in urgent need of continuing and rational attention.

There are certain conclusions that can be drawn from the current state of knowledge about pain-related disability that may be helpful in managing such difficult problems:

- Pain-related disability has a profound impact on the patient, family, and health care provider at many levels.
- Pain-related disability is truly a biopsychosocial phenomenon.
- Pain-related disability requires a comprehensive medical work-up, logically derived and not unnecessarily repetitive.
- Pain-related disability evaluations must be free of negative emotional responses which such conditions often elicit in health care providers.
- Pain-related disability additionally requires that evaluative judgments be based on empirically derived knowledge, not "hearsay" or emotionally driven and selective perceptions of clinical experience.
- Pain-related disability requires consideration of non-organic influences.
- Pain-related disability requires experienced use and valid applications of non-organic assessment measures.
- Pain-related disability may well require an interdisciplinary approach for adequate intervention.
- Pain-related disability requires that suspicion of malingering or factitious disorders be addressed and not simply identified or disdained.
- Pain-related disability requires setting reasonable goals.

In closing, a few observations about the nature of reasonable goals in pain-related disability situations seem essential.

There is a consensus that establishment of a pain-free state may not be achievable in many situations. Dworkin, et al. have suggested that the goal of effective treatment is to limit the dysfunctional impact of pain and change behavior without necessarily controlling pain per se,[47] and Florence has noted a critical goal is to reduce the perception of disability and describes returning to the work site or other appropriate function, with or without pain relief, as a desirable outcome.[48] Other reasonable goals are a reduction of the fear of injury, a reduction of the fear of pain, and a reduction of the fear of returning to work or function.[49]

There is strong agreement with the observation that the appropriate role for the physician is the search for social and psychological factors enhancing the patient's disability and, ultimately, guiding the patient in a recovery process, addressing both physical and psychological needs.[50]

You may also write to her at 100 North Academy Avenue, Danville, PA 17822-1350.

NEWSMAKERS

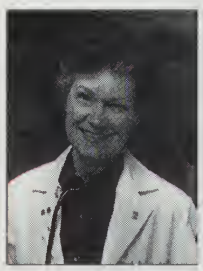
Paul J. Fink, MD, was appointed associate vice president, Albert Einstein Healthcare Network, Philadelphia.

D. Holmes Morton, MD, Strasburg, received the 1993 Albert Schweitzer Prize for Humanitarianism. Dr. Morton treats genetic diseases that cripple and kill children.

John C. Wallendjack, MD, Harrisburg, was named director of HealthAmerica of Central Pennsylvania, which has agreed to join with Berkshire Health Plan (BHP) to offer its health maintenance organization in the Reading/Berks County area.

Bartley P. Griffith, MD, chief of cardiothoracic surgery and professor of surgery, University of Pittsburgh Medical Center, was named to the Surgery, Anesthesiology, and Trauma Study Section, Division of Research Grants, National Institutes of Health.

Sarah S. Long, MD, professor of pediatrics and associate professor of microbiology and immunology, Temple University School of Medicine, Philadelphia, has received Temple's Great Teacher Award for 1993.



Dr. Long

F. William Sunderman, MD, PhD, director of the Institute for Clinical Science, Pennsylvania Hospital, Philadelphia, directed "Advances in the Laboratory Diagnosis of Cancer and Their Clinical Applications for the Association of Clinical Scientists," a four-day seminar held late last year at the Medical College of Ohio. He also spoke at the combined meetings of the XV International Congress of Clinical Chemistry, the 6th Asian-Pacific Regional Congress of Clinical Biochemistry, and the 31st Annual Conference of the Australian Association of Clinical Biochemists on "Evolvement of Clinical Chemistry in the United States."

Sarah Winkelmeyer Holt, DO, Lancaster, recently delivered a baby at Community Hospital of Lancaster—nothing unusual about that. She's delivered hundred of babies during her seven years in family practice; however, during this delivery, she was in the first stages of labor herself. About 27 hours later she had her own baby. The following morning, she was on rounds again, checking on her last patient.

Marluce Bibbo, MD, director of cytopathology, Thomas Jefferson University, Philadelphia, was named the first Warren R. Lang professor of pathology and cell biology at the university.

Dr. Bibbo

Richard Tipperman, MD, an ophthalmologist at Wills Eye Hospital, Philadelphia, was featured on "Tell It Like It Is," an hour-long call-in show on WJIC News Talk Radio, Philadelphia.

Joan Keit, MD, chief resident, Department of Radiation Oncology and Nuclear Medicine, Hahnemann University, Philadelphia, received the 1993 Distinguished Resident Award from the American Association for Women Radiologists.

Penn State's College of Medicine, Hershey, has named **John A. Waldhausen, MD,** as associate dean and director, University Physicians Center, and **James M. Herman, MD,** as assistant dean for primary care, Hershey Medical Center. Also at the college, **William S. Pierce, MD,** Evan Pugh Professor of Surgery, and chief, Division of Cardiothoracic Surgery, was elected to the Institute of Medicine of the National Academy of Sciences.

North Penn Hospital, Lansdale, has announced the following medical staff promotions: **Steven Sklar, DO,** chairman, Department of Family Practice; **Randy Grinspan, DO,** chairman, Department of Emergency Medicine; and **Felix Scherzinger, MD,** chairman, Department of Pediatrics.

Ronald B. Herberman, MD, director, Pittsburgh Cancer Institute, Pittsburgh, and professor of medicine and pathology, University of Pittsburgh School of Medicine, was named the first Hillman Professor of Oncology at the university.

Henry Rosenberg, MD, professor and chair, Department of Anesthesiology, and **John Shutack, MD,** associate professor of anesthesiology, Hahnemann University, Philadelphia, were honored for their work with the telephone hotline of the Malignant Hyperthermia Association of the United States.

Husband and wife **Harold Isard, MD,** and **Sonia Stupniker, MD,** Melrose Park, received the Physician Leadership Award from the Albert Einstein Society, Philadelphia, for their philanthropic service to the Albert Einstein Healthcare Network and their community.

Robert Fry, MD, has been appointed the first Gerald J. Marks professor of colorectal surgery at Jefferson Medical College and Thomas Jefferson University Hospital, Philadelphia.

Jonathan M. Raines, MD, attending psychiatrist at the Institute of Pennsylvania Hospital, Philadelphia, was elected secretary of the Philadelphia Psychiatric Society.

Arthur M. Gershkoff, MD, Philadelphia, was appointed clinical director of stroke rehabilitation at MossRehab Hospital, Philadelphia.

Richard A. Sullivan, MD, medical director, Chestnut Hill Rehabilitation Hospital, Wyndmoor, received the Pennsylvania Association of Rehabilitation Facilities' Distinguished Service Career Award. The award is given yearly to an individual retiring from a distinguished career in the field of medical rehabilitation.

Dr. Sullivan

St. Agnes Medical Center, Philadelphia, has named **Perry Weiner, DO**, as director of urology.

J. Thomas Danzi, MD, was named medical director and associate dean for clinical affairs, Hahnemann University, Philadelphia.

The New Tax Law: Here's What It Means for Your Practice

The Health Care Group

Last month in this column, we discussed how the new federal tax law—the 1993 Revenue Reconciliation Act—will impact individual physicians. Among the provisions discussed were: higher tax rates, limits on itemized deductions, personal exemptions, charitable contributions, estimated payment safe harbors, and others. This month we look at how the business provisions of the new law will impact physicians' practices.

Social Security taxes

In addition to increasing income taxes, the new federal tax law increases the amount of Social Security or self-employment taxes that physicians and other high income earners will pay. Beginning this month, the $135,000 cap on the hospital insurance portion of Social Security tax is repealed. Physicians will pay a combined 2.9 percent hospital insurance tax on every dollar of compensation.

Higher corporation income taxes

Retroactive to January 1, 1993, the flat tax rate on the net income of personal service corporations is increased from 34 percent to 35 percent. See the comparison of corporate and personal rates (next page) for an idea of what this means.

Business expenses of depreciable assets increased

The new law increases the maximum amount that can be expensed for equipment or other tangible asset purchases used in a trade or business under IRS Code Section 179 from $10,000 to $17,500, effective for all purchases on or after January 1, 1993. As a result, practices, whether incorporated or not, can now deduct up to $17,500 in a tax year for purchases of tangible personal (as opposed to real estate) property used more than 50 percent in the practice.

Intangible assets resembling goodwill deductible

Acquired goodwill and other intangible assets can be amortized (e.g., "written off" pro-rata) over 15 years; previously, amortization on these items was impermissible. This change is effective for property acquired after August 5, 1993. Taxpayers are given an option to use 15-year amortization for goodwill and intangibles acquired prior to August 15, 1993, but after July 25, 1991.

The following intangibles are eligible for this write-off: goodwill, going-concern value, workforce in place, information bases, know-how, customer-based intangibles, supplier-based intangibles, licenses, permits, and covenants not to compete.

Off-the-shelf computer software is not eligible for 15-year amortization; neither is other software unless acquired as part of business asset purchase. The exclusion of computer software is not necessarily bad since depreciable software is generally depreciable over three years under existing law. Software bought with computer hardware is generally depreciable along with the hardware.

This provision is intended to curb the games customarily played between parties to a business sale or other major purchase transaction. Buyers, under prior law, sometimes tried to negotiate purchase allocations toward deductible items as opposed to items which could not be written off at all (e.g., goodwill) or which could not be written off without the difficult task of proving that a definite useful life existed (e.g., patient charts and records).

Health insurance deduction for the self-employed

The new law restores, temporarily, the deductibility for 25 percent of the health insurance premiums paid by a partner or shareholder in an "S" corporation. The change is retroactive to July 1, 1992. However, the restoration of this deduction will again expire beginning with the 1994 tax year.

The temporary restoration creates a refund opportunity for physicians whose practices are partnerships or "S" corporations on their 1992 individual tax returns. By filing an amended return, a physician can deduct 25 percent of the insurance premiums actually paid from July 1, 1992, through December 31, 1992, for coverage for the physician, his or her spouse, and dependents.

The deduction will have the double effect of reducing adjusted gross income and increasing the allowable itemized deductions for taxpayers whose adjusted gross incomes are over $120,525 after the deduction (because the phase down of itemized deductions decreases correspondingly to the decrease in adjusted gross income). This should increase the refund.

Since the expiration occurs *after* 1993, the full 25 percent deduction is permissible on the 1993 return. Unfortunately, the retroactivity of the tax rate changes significantly reduces tax planning strategies. Nonetheless, the following planning techniques, some rather traditional, may effectively minimize the impact of the law.

Maximize 1993 compensation: Generally, it is best to defer income, whether short-term (such as until the following taxable year) or long-term (such as until retirement). However, since the $135,000 limit on the hospital insurance tax remains intact for 1993, a physician expecting to earn at least that much compensation in 1993 might consider accelerating 1994 compensation into 1993. Acceleration of $50,000, for example, would save $1,450 in hospital insurance tax.

For example, in 1993 a practice could borrow enough money from a bank to advance to its doctor three months' compensation. The practice would then repay the loan during the first three months of 1994 in lieu of

paying a salary to the doctor. In this event, however, the doctor must compare the savings of tax versus the cost of borrowing (i.e., interest).

Maximize current deductions: As always, current year deductions should be maximized to minimize current taxable income. Prepaying real estate taxes, mortgage payments, and estimated state income taxes in December rather than in the next year are the usual techniques.

Maximize retirement contributions: As a further means to reduce taxable income, maximize contributions to tax-deferred qualified retirement plans such as 401(k) plans, Keogh plans, IRAs, and profit-sharing and pension plans. Income derived from investment into these plans is not taxed until withdrawn. The investor is not generally required to take distributions from a qualified retirement plan until April 1 following the calendar year in which he or she reaches age 70½.

For hospital-employed physicians, non-qualified deferred compensation arrangements are available which may be used as a substitute for, or a supplement to, a qualified plan. Tax-deferred annuities are another option for long-term investment deferral. Non-qualified arrangements, however, are generally unsecured, meaning that any funding is usually subject to the hospital's general creditors.

Consider tax-exempt investments: Physicians should consider restructuring the fixed-income or bond portion of their investment portfolios to include some or more tax-exempt municipal bonds. As a result of the rise in tax rates, the effective (after-tax) rate of return of a taxable investment is likely to be lower than for tax-exempt investments. To reduce bond value volatility, avoid maturities of longer than three to seven years.

Further, consider increasing investment in growth stocks in lieu of income stocks (stocks that historically pay dividends) to maximize deferral and to take advantage of the capital gains/ordinary income tax rate differentials. Remember, the first priority in structuring a balanced investment portfolio is to meet personal overall financial needs and risk tolerance. Avoid making investment decisions solely for tax reasons.

Compare individual and corporate rates: Physicians in incorporated practices should compare the new corporate tax rate (35 percent) to the marginal individual tax rates on private income before making a larger non-deductible purchase for the practice. In recent years, owners of professional "C" corporations were sometimes advised to finance practice purchases with borrowed funds rather than using corporate income for this purpose—hence, paying taxes at lower individual rates than higher corporate rates.

However, under the law the two new marginal rates on individual income (36 percent and 39.6 percent) are higher than the tax rate on professional corporation income. In addition, the increased expensing deduction for certain capital purchases may make it more attractive to purchase with corporate funds. Therefore, physicians may need to reconsider practice purchase philosophies. When comparing rates, however, remember to factor in the state rates.

The contributing author, Mark A. Abruzzo, JD, is an attorney with The Health Care Group, a medical practice management consulting firm based in Plymouth Meeting.

"Ron's Rule—I give myself one week to meet new people and start having fun on a locum tenens assignment. It hasn't failed me yet."

Ron Richmond, MD, joined the CompHealth locum tenens medical staff when he completed his residency. He wanted to travel. He loves to meet people. A little time off sounded really good. And he thinks being exposed to different types of medical practice will serve him well when he returns to his hometown to establish a community health center.

A singer. A board-certified family practitioner. A soft-spoken New Yorker. Ron Richmond knows...

It's a great way to practice medicine

Politics: A Game Doctors Won't Play

Andre C. Blanzaco, MD

Excerpted with permission from *Philadelphia Medicine*, Volume 88, Number 7, July 1992.

Lawyers, when they start into private practice or join an established law firm, are well aware that changes in laws or governmental regulations will have a strong impact on their salaries. They keep abreast of impending legislation, make certain that their position is well lobbied to the legislators, and, importantly, donate generously to their political action committee (PAC) to keep in touch with key legislators. This is a way of life for members of the bar, especially the plaintiff bar. It ensures them of being at the "grassroots" of law-making, where it makes the most impact on their wallets.

In the past few years, events have started to make an impression on the purse-strings of physicians: malpractice laws, the escalating prices attached to insurance premiums and/or CAT fund assessments, auto insurance reform, the Medicare Fee Control Act, office laboratory regulation, Title X "Gag Rule" legislation, workers' compensation reform, RBRVS, etc., etc. Then along comes health system reform. Physicians cannot help but be confused and overwhelmed by this barrage of laws and regulations. We have never been so besieged, let alone in such a short framework of time.

Add to this the general apathy of physicians when it comes to things alien to their own practice of medicine; add the fact that only 47 percent of physicians belong to organized medicine through their county and state societies, and the AMA; that only 17 to 20 percent of physicians contribute to medicine's PAC; and that only 40 percent of physicians are registered to vote, let alone appear at the voting booth on primary and regular election days.

Most physicians do not know the name of their senators, congressmen, state representatives, local commissioners, school board members, and judges. Physicians, in general, have a very difficult time regulating things in their own practice, their hospitals, their own medical societies, and in their own specialties. Regulation and discipline are left to "the other guys."

Well, doctors, it is now time to wake up and get involved. Legislators, and some of our physician leaders, have been telling us, "Make your own rules and regulations, and police them diligently, or someone else will do it for you."

What can you do as a physician, right now, to reverse the roles that we have gotten ourselves into, so that we can finally deal from a position of strength?

First, those of us who are members of organized medicine should make every effort to convince the non-member physicians on our hospitals staffs to join through our county societies.

Second, we members should become involved in some facet of Society affairs. Just paying the dues and saying one is a member is not enough. If every member would give five minutes of his or her time, every month, to some aspect of organized medicine, what an organization we would have!

Third, know your Hospital Medical Staff Section representative—better yet, become a member of HMSS—and participate in their excellent programs.

Fourth, contact the State Society if you have any personal or "grassroots" contact with local legislators. Our Legislative Action Teams (LATs), on both state and federal levels, maintain close personal contact with legislators in order to have easy access to their ear when a particular legislative item is important to the Society. There is great need for physicians to serve on their local LATs.

Legislators are often not in tune with medical information. It is the job of the physicians—working with the State Society's governmental and regulatory staffs—to see that they are provided correct information.

Finally, you need to become involved in our PAC. Unfortunately, less than 20 percent of the membership contribute to this cause. A category with the annual dues billing requests contributions, which must be sent by separate check. The usual contribution is $100, and a Keystone Club contribution is $250.

It is up to us to want to learn the game, master the rules, and turn that knowledge into brilliant strategy to come out a winner, almost every time. It's up to you to do something about it.

Dr. Blanzaco, an obstetrician/gynecologist in Philadelphia, is past chairman of the Society's Council on Governmental Relations and an at-large-member of the Pennsylvania Medical Political Action Committee board.

Go electronic.

You'll never look back.

Turn claims into cash, fast. 7 days instead of 14, for the average claim.

Prepare claims more than twice as fast, and file them without cost over our toll-free lines. Eliminate postage and related expenses.

Get immediate confirmation of claims received.

Get information on claims status, so you can accurately project your cash flow, streamline your collections and avoid filing unnecessary duplicates.

Access necessary patient information directly, including group number, coverage, eligible dependents, benefits explanations — and more.

Access reports to simplify and speed reconciling accounts and posting to accounts receivable.

But the best news is that the cost of getting started is low* for providers without computer automation — *no* cost to providers with a compatible computer system.

Find out how easy it is to go electronic.

For more information and expert advice, call Kathy Smith: ***1.800.992.0246***. She's got great news to share with you and your office manager.

Go electronic. There has never been a better time. There have never been better reasons.

**If you don't already have a computer, you need an IBM/compatible, DOS 3.3 or greater, MNP protocol modem and a printer. Estimated cost: $1,566. Software and technical support is FREE from Pennsylvania Blue Shield Electronic Services.*

DON'T LET REFORM FOWL UP MEDICAL CARE.

Flocks of non-physician practitioner groups are using the call for health care reform as a decoy to lower licensing requirements and broaden their scopes of practice.

This past Spring our patients were not migrating to Canada to receive medical care. Why not? Because the quality of U.S. medical care is the best in the world.

However, it seems that non-physician health care providers are flocking to Harrisburg and Washington for qualification — by legislation rather than education – to hang a shingle and practice medicine.

Though everyone, including the Pennsylvania Medical Society, strongly supports responsible reforms to improve access and lower costs in our current health care delivery system, lowering licensing standards and broadening the scopes of practice for health care providers who did not attend medical school is not the answer.

From the right to prescribe medicine to the right to perform surgery, the requirements needed to graduate from medical school and become a licensed physician are often taken for granted in the fundamental relationship between physicians and their patients.

Skyrocketing malpractice liability insurance costs, which the Clinton Administration's reform proposal has ignored, will soar even higher if the standards for practicing medicine are lowered.

It's ultimately the responsibility of Pennsylvania physicians to protect their patients from those who are seeking to use the reform movement as a decoy to lower medical licensing standards in an effort to practice medicine without attending medical school and a medical residency.

Please don't duck your responsibility to protect the high standards of medical care in Pennsylvania and across America. Join and/or upgrade your membership in PAMPAC today.

Pennsylvania Medical Political Action Committee
PAMPAC

Hey Pennsylvania Physicians! Don't Duck The Bill. Join Or Upgrade In PAMPAC Today.

This advertisement is intended for Pennsylvania Medical Society physician and alliance members. PAMPAC is a separate segregated fund established by the Pennsylvania Medical Society. Voluntary political contributions by individuals to PAMPAC should be written on personal checks; corporate contributions can be used only for administrative purposes. Contributions are not limited to the suggested amount. Neither PAMPAC nor its AMA affiliate, AMPAC, will favor or disadvantage anyone based upon the amounts of, or the failure to make, PAC contributions. Voluntary political contributions are subject to the limitations of FEC Regulations, Section 110.1, 110.2 and 110.5 (Federal regulations require this notice). A portion of your contribution will be forwarded to AMPAC to support candidates in Federal elections. Contributions to PAMPAC and AMPAC are not deductible as charitable contributions for Federal Income tax purposes.

SOMETIMES THE BEST DEAL IS THE ONE YOU HAVEN'T HEARD ABOUT.

Maybe you haven't heard about the Medical Inter-Insurance Exchange (MIIX). After all, we're a relatively new player in Pennsylvania's medical professional liability insurance marketplace.

But ask your counterparts in New Jersey, and you'll find we've been getting rave reviews since we wrote our first policy there in 1977. We're proud that 98 percent of our 9,000 insured physicians renew their policies each and every year. With such an outstanding track record, we must be doing something right.

Perhaps it's our **innovative products**, such as our new **$500,000** HIV benefit that provides income protection — at no additional charge — for physicians who become HIV positive. We were the first professional liability insurer in the state of Pennsylvania to offer this coverage.

Or maybe it's our **commitment to service**, which includes 24-hour customer assistance and a claims staff that's the best in the industry. Our insureds know that MIIX makes sense financially, too, considering our outstanding discounts for new and part-time practitioners. We also offer flexible premium payment plans that help you manage your money.

Because MIIX is a **physician-owned company**, you can be assured that everything we do is designed with your best interests in mind. Call us today so you can join your peers who are already benefiting from the MIIX difference.

14 How to Select the Right Practice Management System

With the future of medicine and health care "reforms" looming, physicians who plan to automate their practices—or upgrade an existing system—will want to start now. This article offers a series of questions to help physicians define their needs and develop an accurate blueprint of their plans.

18 The Concept of Futility

As technology has expanded our ability to prolong physical existence, the futility of continuing medical treatment in certain cases has come under increasing debate. Medical ethicists present both sides of the argument:

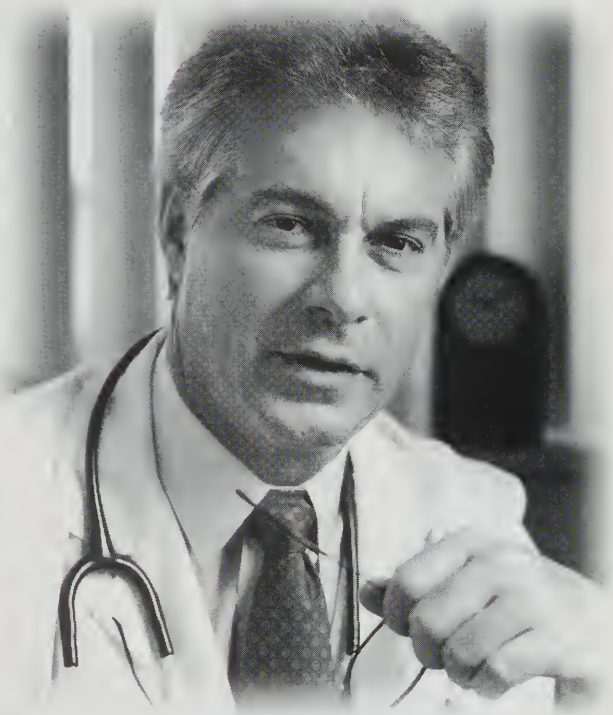
"Unfortunately,

he was already sitting in my examining room. This guy was a walking liability suit looking for a victim. He was angry, non-compliant. It was one of those rare, no-win cases and, well, I guess my number was up.



Then I remembered PMSLIC. So I stepped into the next room and gave them a call. They put me in touch with a member of their Risk Management team, who advised me of the relevant legal issues and the implications of each of my alternatives. Right on the spot. As a result, I was able to make the best medical recommendation with the peace of mind that comes from knowing my legal interests were also protected. I guess that's what it's all about. Peace of mind. The kind you only get from people who really take the time to help. That's excellent service. I'll never change carriers."

MEDIGRAM

AMA LAUNCHES ANTITRUST CAMPAIGN: The AMA launched a massive grassroots campaign in late January to enact the Health Care Antitrust Improvements Act of 1993 as part of any health system reform legislation passed this year. The act was introduced as S. 1658 and H.R. 3486.

Stating that enhanced physician involvement in the changing medical delivery system is vitally important, the AMA said: 1) any reform package adopted this year must mandate a broad physician role in all health plans and in federal health care policy; 2) current legal impediments to physicians acting together to influence health care delivery must be removed for the benefit of all patients; and 3) while these bills would represent a major first step toward achieving significant antitrust relief, they should be viewed as "placeholder" legislation for organized medicine, and more is needed in antitrust relief and other physician involvement matters.

The AMA believes antitrust reform must give physicians the right to: negotiate with insurance and hospital plans about the terms of the plan; organize physician-controlled networks without fear of antitrust violation; participate in a negotiated rulemaking process with federal and state governments regarding any new rule or regulation involving medical practice prior to its implementation to eliminate government over-regulation and the hassle factor; form committees with health care plans with legal rights to influence medical and other plan policies; and be involved in establishing standards of quality, treatment, competence, and data collections regarding physicians and health care delivery systems.

THE STATE SOCIETY, IN COOPERATION WITH THE AMA, IS ENCOURAGING PHYSICIANS TO CONTACT THEIR U.S. SENATORS AND REPRESENTATIVES TO URGE THEIR COSPONSORSHIP OF H.R. 3486 AND S. 1658. By securing cosponsors of these bills, the AMA believes medicine will be in a stronger position to begin to advocate broader relief as Congress addresses reform in its committees. Copies of communications should be sent to the Society's Division of Governmental Affairs.

NEWEST CABG REPORTS RELEASED THIS MONTH: The Pennsylvania Health Care Cost Containment Council (PHC4) on February 3 released its newest Consumer and Technical reports on physician-specific coronary artery bypass graft (CABG) surgery. The Society still has some concerns about the reports, which are based on 1991 data, but says they are an improvement over reports published in 1992. Added to the reports this year are 1990/91 data comparisons, clearer explanations of mortality statistics, and technical improvements. For free copies of the reports, write to PHC4, Suite 400, 225 Market Street, Harrisburg, PA 17101.

IMMUNIZATION ADMINISTRATION FEE BILLABLE TO BLUE SHIELD: Physicians are reminded that Pennsylvania Blue Shield will reimburse for an administration fee in addition to the immunizing agent when providing an immunization service. Procedure code W0353, (Intramuscular or subcutaneous injection of immunization agent) should be billed in addition to the drug code on a separate claim line. If you have not billed for the administration code, retroactive reimbursement is available up to one year from the date the service was rendered. Direct any questions regarding how to bill for this service to the Society's Department of Medical Economics at (800) 228-7823 or (717) 558-7750.

ALLIANCE DONATES $1,000 TO AID EARTHQUAKE VICTIMS: The Pennsylvania Medical Society Alliance has donated $1,000 to aid victims of January's Los Angeles earthquake. The money was distributed in consultation with the California Medical Association Alliance. To make a donation, send a check payable to: The Educational and Scientific Trust, Pennsylvania Medical Society, Alliance Emergency Assistance Fund.

IMGs INVITED TO MARCH FORUM: Representatives of the Society's Advisory Committee on International Medical Graduates (IMGs) are invited to attend the AMA's Fifth Annual IMG Forum, to be held March 16-18 in Washington, DC. The forum will include congressional visits and feature a special training session on speaking techniques. For more information, call the AMA IMG Services Unit at (312) 464-5624.

SOUND PROTECTION

Choosing a professional liability insurer is a major decision–too important to play by ear.

Princeton Insurance Company's high-quality investment portfolio and our conservative approach to loss reserving have made us the choice of 22,000 in the medical and health care community.

We're not just blowing our own horn. Standard & Poor's has awarded us a claims-paying ability rating of "A."

That's sound protection through financial strength and stability.

Princeton. It's worth it!

New Spring Assembly Welcomes All Members

John W. Mills, MD
Medical Editor

Coming in April is the Pennsylvania Medical Society's "Spring Assembly," which you have known as Leadership Conference for a number of years. Our theme this year is "Forging Alliances...Assuring Your Future." It will run from noon on April 19, 1994, through noon, April 20, at the Harrisburg Hilton and Towers.

The name change was prompted by the impression among some groups within the Society that the conference was "only for leaders" or those who aspired to be leaders. Nothing could be further from the truth.

Years ago, this meeting originated as the officers' and trustees' conference, which did signify a strong leadership attendance. When the name was broadened to "Leadership Conference," and top-notch plenary speakers and useful workshops were added, attendance swelled. However, this year's committee felt that many members were still intimidated by the name, especially younger members and minorities—thus the name change.

Your committee has worked diligently each year to better the conference over the previous one. In general, I think we've been successful. Recently, we instituted an annual brain-storming session of the committee, within a couple of months post conference, in which we analyze attendance and comments in an effort to become visionary in our projections and planning. This has proved to be very helpful and rewarding.

The committee is appointed by the Society's board each year following the conference. Members may serve five years, and this year we are particularly fortunate to have a female, non-board member on our committee.

At our brain-storming session in July last year, we really pulled out all the stops and considered a myriad of changes. One was the name—we hope you approve, but more importantly, we hope you come.

Another change will take place in 1996. We have scheduled a weekend Spring Assembly to allow more families to attend, and have reserved the newly refurbished Lancaster Host for the meeting.

We are trying to appeal to more members on a broader scale and hope the weekend format will be inviting. I must say that mentioning child care and spousal activities, etc., raised some eyebrows, but we think it will be a "GO" Spring Assembly in '96, and add a new dimension and new look to a supposedly "male-dominated" meeting. Gentlemen (generic), we need to be aware of the "glass ceiling" and help to eliminate it in the Pennsylvania Medical Society—this can only increase our stature.

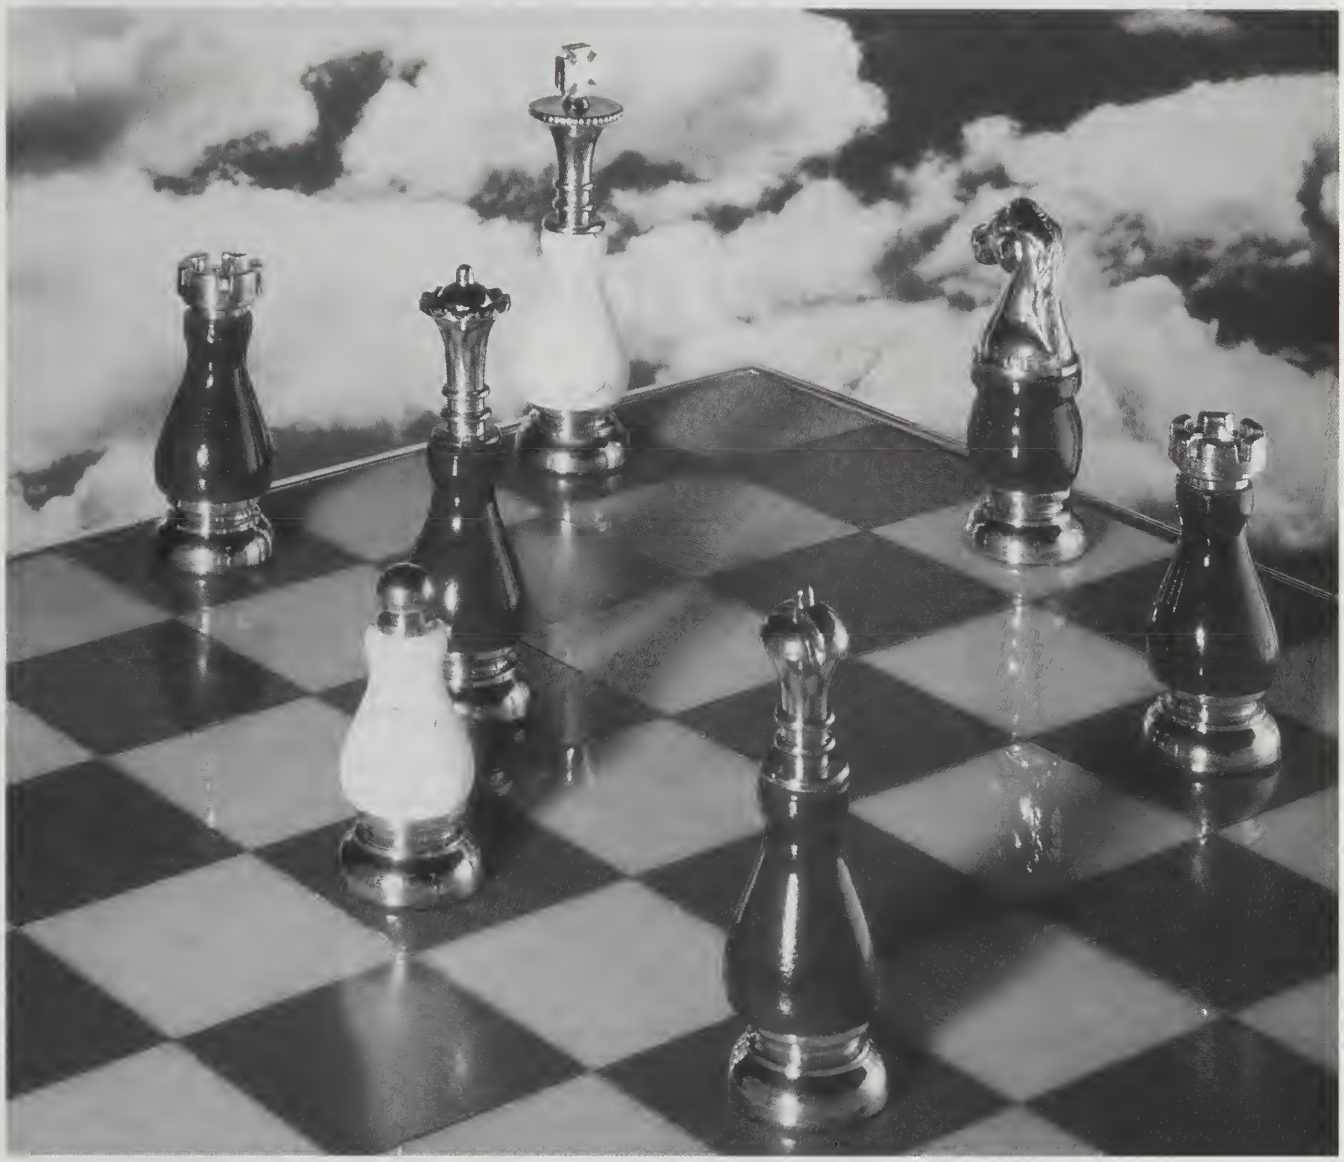
To get back to this year's Spring Assembly, details are outlined on pages 42 and 45 of this issue, but let me emphasize that it includes four super plenary speakers, and break sessions with each, so you can question them on a one-to-one basis and gain valuable information for your strategy in dealing with health system reform. On Wednesday morning, we will offer practical, practice-enhancing workshops.

Another innovation added in 1993 was the promotion of on-site vendors. This was done for two reasons: 1) to help defray expenses (they keep going up like everything else—especially speaker fees); and 2) to expose you to new products of all types—medical, business adjuncts, etc. Despite some negative comments over the vendors, the committee felt that we needed to move forward in this potential area of revenue.

Last month, I was very critical of the AMA's Physician Forum, "Agenda for Action," held in November in Philadelphia. (You should have seen my original manuscript!) It was felt that by being negative about the AMA meeting, I would scare members away from our Spring Assembly. No way. Our members have supported the Leadership Conference (old name), and they know they'll get their money's worth with practical information they can use. There can be no comparison between the AMA's Philadelphia meeting and our Spring Assembly.

The stakes are huge in the health system reform debate. I encourage you to attend the Spring Assembly to get practical advice and knowledge about how to deal with the changing times in our profession. We promise a fast-moving meeting, short on rhetoric and long on help.

Dr. Mills is chairman of the Society's Spring Assembly Committee.



In claims, it's the endgame that counts

A malpractice claim brought against a physician brings to mind two things: reputation and money. We consider a third: the bond of care and trust between physician and patient.

Successful endgame results resolve all three. To do that, you need a consistent, winning strategy. Strategy that considers the merits of the claim, the complex court system and the National Practitioner Data Bank. Knowing when **and how** to fight is crucial.

In little more than a decade, we've achieved checkmate in over 95% of the cases taken to court. A vigorous defense, a successful conclusion for our policyholders. And always, your participation in every decision. When we need to settle a claim, settlements are fair to both parties.

We're here to serve physicians, patients and the healthcare field. How is this done? With financial stability, competitive premiums, integrity, and the right team members.

Physicians Insurance Company is dedicated to making all these elements work together. That's why we get to endgame with confidence. That's why we'll continue to be here for our policyholders.

What Not to Hope For: Practicing Under Government Rule

Martin A. Murcek, MD

I had the pleasure recently of speaking with Dr. Miroslav Zeleznik, who came to the United States 23 years ago from Bratislava, Czechoslovakia, where he had practiced medicine under the communist regime since 1958. I thought Dr. Zeleznik could provide me with some insight on the realities of a government-run health system from the physician's perspective. His observations follow.

Becoming a doctor under the socialist regime meant meeting certain requirements, in addition to the academic ones you would expect. If you didn't come from a "good proletarian background," you didn't go to medical school.

Once graduated, Dr. Zeleznik became what we call a family practitioner associated with a hospital. The other major areas of practice were "industrial medicine" and "adolescent medicine." Doctors were either associated with a hospital, or less frequently, worked out of a state-provided office.

Where you practiced was decided by the state. "If they liked you," Dr. Zeleznik said, you could get a desirable assignment. "If you had a good friend, you can get to heaven, too," he also observed.

The organizational structure within the hospital was straightforward: Physicians worked in teams, under the direction of a chief physician. This "floor director" had absolute say on discharge of patients and also monitored each doctor's continuing education efforts. Being "on call" meant being where the authorities told you to be.

Hospitals closer to major cities and key industrial sites had the best resources. Dr. Zeleznik pointed out that the "medical director" of a given hospital had personnel authority, but all money decisions were in the hands of a non-physician political administrator.

When Dr. Zeleznik began practicing in 1958, the facilities were lavish. "They had the best of everything," he noted. But as the socialist economic system wound down, shortages began to occur. Inadequate supplies of some pharmaceuticals led to the institution of a sort of copayment system to discourage demand.

"Time and resources were always short," Dr. Zeleznik said. It wasn't uncommon for people to use "connections" to get into the best facilities. Often, knowing what the patient needed was secondary to the reality that "you could only do so much." If superiors could be convinced that a CT scan was in order for a patient, there was still a 100-mile trip to the facility.

While all these things don't seem too out of line with stories many of us have heard before about Iron Curtain medicine, Dr. Zeleznik did relate one observation that seemed truly shocking to me. On a return visit to his homeland since the fall of communism, *almost everything in the hospitals was unchanged from 30 years ago!* Shortage of resources, indeed.

And, he said, resources are *still* scarce and continue to be allocated inequitably. The best-equipped hospitals remain closer to the cities, where the politicians and their families reside.

Some of the aspects of state-run medicine, while incompatible with American sensibilities, do have their attractions. Preventive medicine was literally enforced by law. If you missed a required appointment or failed to bring in a child for immunization, the police brought you in—to the doctor, that is.

There was no malpractice liability in the sense that we know it, but, Dr. Zeleznik noted, "If a mistake was made," the offending physician could be "sent someplace unpleasant" to continue his practice.

Finally, Dr. Zeleznik gave me an account of an incident which may epitomize the chaos in this former system: "Sometimes, when I had to go out with the ambulance, I would drive, while the ambulance driver lay in back. You see, he was drunk, and I didn't trust him to drive. I did this because he had a family to provide for, and if I reported him, he would lose his job!"

One credit hour may be claimed for each hour of participation by the individual physician.

LETTERS TO THE EDITOR

EMPOWERING AMERICA: IMPLICATIONS OF CLINTON'S HEALTH SYSTEM REFORM PLAN

Editor's note: The author originally offered these thoughts at the December 14, 1993, Empower America health system reform meeting in Washington, DC.

We have referred to the economic and functional aspects of the Clinton health program—the disaster it represents. Today I'd like to emphasize the philosophical and psychological implications of this program.

I want to refer specifically to the massive effect upon the American people that enactment of such a program would have. It would change a free people into a dependent people—people who would be wards of the government, people who would lose their right to make the most sacred decisions [and] the right to make decisions about their mental health and physical health. It would diminish their innovativeness, and it would impoverish them financially, all of which would predispose them to have reduced resistance to further attacks on their freedom and their right of decision making.

Having medical care controlled by the federal government has a profound psychological impact. I studied this in England. It diminishes the sense of self-reliance. In essence, what this attack is going to do is diminish the human base for entrepreneurial activity. It will remove people from a free life capable of making innovative decisions to a people who become wards of the government, and, as such, will be less equipped to serve as a human resource for entrepreneurial activity.

I should like to conclude by referring to the bad effects this will have on the medical profession. Innovation will disappear, spiritual impoverishment will exist due to government regulations, and a different type—an unsatisfactory type—of physician will emerge. The profession that produced Benjamin Rush and other leaders will be no more.

Thank you for this opportunity to reflect with you and share some thoughts with you. I think we should look at this thrust as a means of using health care as a tool to undermine the free structure of our society. We are going to the ramparts to protect our patients and our beloved profession from being humbled.

Join with us to help protect the entrepreneurial system.

Paul S. Friedman, MD
Philadelphia

HEADACHE
IN THE DECADE OF THE BRAIN

SATURDAY, APRIL 9, 1994, 8:15 A.M. TO 3:15 P.M.

The Ninth Headache Symposium presented by the Comprehensive Headache Center at The Germantown Hospital and Medical Center

The 1990's are "The Decade of the Brain." Join a panel of international experts who will explore topics that will shape the decade.

The presentations include:

- *Diagnosing Migraine in General and Hospital Practice*
  Joseph N. Blau, M.D.
  National Hospital for Neurology
  London, England
- *Migraine: Epidemiology and Societal Impact*
  Richard Lipton, M.D.
  Montefiore Medical Center
- *Cluster Headache and Its Variants - An Update*
  Ninan Mathew, M.D.
  Houston Headache Center
- *Sex Hormones and Headache*
  Stephen D. Silberstein, M.D.
  Comprehensive Headache Center at
  The Germantown Hospital and Medical Center

A $25 registration fee is required made payable to The Germantown Hospital and Medical Center. Lunch, handout materials and free parking are included. Register by March 15, 1994 by calling **(215) 951-8926.**

The American Association for the Study of Headache is accredited by the Accreditation Council for Continuing Medical Education to sponsor continuing medical education for physicians.

The American Association for the Study of Headache designates this continuing medical education activity for 5 credit hours in Category 1 of the Physician's Recognition Award of the American Medical Association.

No personal financial relationships which, in the context of the subject of each speakers invited presentation, is perceived as a real or apparent conflict of interest.

Symposium funding provided by Glaxo, Inc., Sandoz Pharmaceuticals, Abbott Laboratories and Carnrick Laboratories, Inc.

How to Select the Right Practice Management System

Kenneth Podd

With health care "reforms" looming, physicians who plan to automate their practices—or upgrade an existing system—will want to start now. Otherwise, physicians who wait until the dust settles may find themselves facing two major projects: government mandated changes and computerization.

If you have delayed entering the computer age, don't despair. As many as 80 percent of all Pennsylvania practices are not yet taking advantage of the speed and efficiency that this technology offers physicians.

Getting the right computer hardware and software up and running in a physician's practice can be compared to the process of building a house. Before you can break ground, you must first define your needs and develop an accurate blueprint of your plans.

The key is to approach the process from a business perspective. You must operate your practice efficiently and at a profit...or you won't be in business long. Whether you are already automated or not, you will want to ask yourself several questions:

What are my requirements?

The more effort you put into defining your needs and expectations, the more cost effective the outcome will be. For example, if cash flow and reimbursement turnaround is a concern, you need to find the root cause and speed up the process. Since you can only control the systems within your own four walls, you will want to look into automating any manual procedures.

If you already have a computer, you may want to upgrade it to add speed and new features, such as electronic claims submission. What you don't want to do is perpetuate a bad system, be it manual or automated.

If you have a one- or two-person practice, you may be operating the system yourself. If there are 20 doctors in your firm, you may need a designated systems operator.

Stop to visualize how the system will fit into your organization and who will be responsible for it. What special features do you want? What is your volume of work?

Keep in mind that selecting the right software is the most important aspect of your purchase and should come before buying hardware. If you buy the computer first, it could limit your range of software choices later.

How do I determine what I need?

A good way to map out your objectives is to sit down over a weekend with pen and paper and give your expectations some thought. What do you want the system to do for you? How about billing, claims processing, scheduling, and patient records? Other functions may include streamlining administrative tasks such as compiling accounts receivable analyses, processing payroll, and generating form letters and mailing labels.

Next, determine what the system would be worth to you. For instance, would automating reduce the number of file clerks you need from five to three? Or, will it save you from having to hire additional staff? How much would that mean to you?

Will the system keep pace with your growing practice? For example, if you have a multiple-doctor practice near an expanding medical center, you may want to anticipate your future volume. Other growth factors include adding physicians and staff or opening another office.

What are the best resources for information?

The Pennsylvania Medical Society's *Practice Management Software Comparison* is a comprehensive resource which is updated annually. This 62-page guide contains an evaluation of several top software products and vendors, a glossary of computer terms, and extensive checklists to prompt you during the planning stage (see excerpt, page 14).

The guide also breaks hardware pricing into three options: a basic, low-end system; a mid-range system that will allow for →

THE MEDICAL MANAGER

Choosing a software package to entrust with the management of your practice is serious business. After all, your practice is your livelihood.

When you choose The Medical Manager, you are choosing the undisputed leader in practice management software. More than 80,000 physicians in over 75 different specialties manage the business end of medicine with the Medical Manager. From solo practitioners to large specialty groups and clinics, more physicians use The Medical Manager than any other practice management system.

The Medical Manager utilizes the latest in cutting edge innovations and technology to provide your practice with capabilities above and beyond basic practice management. First introduced in 1982, it is a mature product, free of the problems often found in younger systems. The Medical Manager's stature as the market leader is so strong that many community colleges and vocational schools use the system in their medical office management classes.

Standard Features

- Accounts Receivable
- Insurance Billing
- Practice Management
- Appointments and Recalls
- Patient Eligibility and Plan Information
- Practice and Physician Analysis
- Clinical History
- Procedure, Diagnosis and Financial Histories
- Hospital Rounds
- Over 150 Standard Reports
- Handles from 1 to 999 Physicians

Optional Features

- Automated Collections
- Managed Care Options
- Electronic Data Interchange (EDI) Interface
- Electronic Laboratory-Physician Link
- Electronic Hospital-Physician Link
- Electronic Claims Submission
- Electronic Remittance Advice
- Automated (UB) Billing
- Custom Report Writer
- Data Merge/System Customization

Specialized Computer Systems, Inc. has been providing practice management software solutions to medical offices throughout Pennsylvania since 1983. The Company is the oldest authorized reseller of The Medical Manager in Pennsylvania. Our fully trained staff assures you of quality service and support from demonstration to implementation and beyond.

Specialized Computer Systems, Inc. · P.O. Box 1044 · DuBois, PA 15801-1044 · 814-375-0700

Physician Checklist

This checklist, excerpted from the Society's of *Practice Management Software Comparison*, poses questions for physicians to consider when evaluating software and hardware to automate their practices.

Software Considerations

Vendor Qualifications

- ☐ Where is the vendor located? Where are their regional offices?
- ☐ How long has the vendor been in the business of providing services for practice management software? Ask the vendor to provide an annual report or a financial statement.
- ☐ Is the vendor involved in any other services that would distract them from providing service to the physicians' offices?
- ☐ How does the vendor provider support and training? What is the cost for these services?
- ☐ Does the vendor assist you to convert files to the practice management system? What is the cost? How long will it take to convert the files?
- ☐ Does the vendor conduct user group meetings to discuss issues? How often?

Ease of Use

- ☐ Is the software modular? Can you purchase additional software components as your practice grows? Can the software be customized for your practice?
- ☐ Is the software menu-driven? Does it use windows, and how does the vendor define windows?
- ☐ Does the software have a help bar on the screens to assist you with commands?
- ☐ Does the software allow you to use short cuts to speed up data entry? Are function keys preprogrammed?

Processing

- ☐ What standard data files must be created, such as doctor, patient, and insurance carrier files, and procedure and diagnostic codes?
- ☐ Can changes be made to the data files from individual patient screens? Are those changes made automatically in all other areas that data is located?
- ☐ How do you search for patient information?
- ☐ Does the software have a suspend feature?
- ☐ Is word processing available through a direct link or through another interface?

Security

- ☐ Does the user have the ability to assign account numbers and define their own account classifications?
- ☐ Does the software have multiple levels of security?

Reports

- ☐ Does the software have standard reports available on the system? What are the reports? How often are the reports available?
- ☐ How easy or difficult are the reports run? Is the software unavailable to use for other purposes while the reports are running?
- ☐ Can reports be customized? Can the practice customize or create new reports, or does the vendor have to provide that service?
- ☐ If reports must be customized by the vendor, how long does that take and how long is the delay? How much does it cost?
- ☐ If the reports can be used by other practices, does the vendor share the cost among the practices they serve?

Hardware Considerations

Application

- ☐ When selecting your hardware, do you have a wide variety of manufacturers and name brands from which to choose or is your selection limited?
- ☐ Can the equipment selected be integrated to meet your needs?
- ☐ Is the hardware produced by one of the top 10 manufacturers in the country?
- ☐ Does the vendor have a legal, contractual agreement with the manufacturer? If not, how is the hardware acquired?
- ☐ How easily and quickly will the practice be functional on the new system?
- ☐ How available is the vendor during this transition to the new system? Will you be charged extra for this service?
- ☐ What is the charge for installation and/or cabling?
- ☐ Is there an additional charge to configure the system if the hardware was purchased through a separate hardware vendor?

Storage and Memory

- ☐ What is the storage capacity of the current system (in megabytes)? Can the memory be expanded?
- ☐ What happens if this proves inadequate? What are the procedures if this limit is reached and additional storage capacity is required?
- ☐ How is business resumption handled in the case of a disaster? Off-site backups?
- ☐ What type of disk drives does the system possess?
- ☐ Does the vendor guarantee the recommended memory requirements? Does the vendor calculate the future expansion of the practice when recommending hardware?
- ☐ Does the vendor provide any projections for the size and capacity of the hardware needed?

Speed

- ☐ What is the processing speed of the system?
- ☐ How efficiently does it handle using the peripheral devices (printers, disk drives, monitors, etc.)? Is the access time for these devices substantial? Will the peripherals slow down the processing speed?
- ☐ Does the vendor provide any recommended limit to the amount of data on the system before the speed is impacted?

Maintenance

- ☐ Does the vendor have a legal, contractual service agreement with the manufacturer? If not, how is hardware servicing handled? Do they do it themselves? Do they recommend a third-party maintenance company?
- ☐ Where are the service representatives located? Is there a local service center close by?
- ☐ What is the vendor's policy on repairs and replacement?
- ☐ What are the vendor's guarantees for down time? How quickly will they restore the system?
- ☐ What are the vendor's requirements for back ups? Are there any guarantees?
- ☐ What is the response time to your site after the service call is placed? Is this response time guaranteed?
- ☐ What repairs are included under the service contract? Is preventative maintenance included or must this be purchased separately? Are software and/or system enhancements included?
- ☐ Are there any additional fees required for certain maintenance operations?
- ☐ Are there any warranties on the equipment?

Future

- ☐ What kind of long-range growth plan do they offer?
- ☐ Are there expansion capabilities with the current system?
- ☐ Do they have a documented list of their most recent system enhancements and their projections for future enhancements available for your review?
- ☐ What is required to upgrade the system? New hardware? New software?
- ☐ What is the proposed cost, if any, for upgrading the system?

a limited amount of expansion; and a top-of-the-line system that can be more extensively expanded. In the 1994 *Practice Management Software Comparison*, hardware pricing ranges from $1,300 to $2,200.

The guide's selection on software vendor comparison includes an analysis of practice management/electronic claims submission vendors offering quality products and services, and who passed the evaluation criteria, including reference checks. For ordering information, see page 17.

Your initial research may also include reading professional journals, researching directories in your local library, and talking to vendors and retailers. Another good source of information will be your peers. Find out what they have done and how much it cost; ask them what is good or bad about the system they chose. Pennsylvania Blue Shield-Electronic Services also provides limited information on software vendors (800-992-0246).

How do I get my plan off the ground?

Start by defining your acquisition plan, accessing the skills you need to implement the plan, and scaling your efforts appropriately. Consider hiring a consultant for the skills you may not have, such as setting up local area networks.

List the activities you want the system to perform and define your staff members' responsibilities. Determine your approximate start-up, installation, and supply costs, and budget for recurring expenses. Don't forget to factor in data entry time or →

You Deserve the Best.

Before purchasing computer software for your practice, make sure your vendor can offer the following:

- ✔ *Automated Posting of Medicare, Blue Shield, Prudential and other carriers.*
- ✔ *No testing for Medicare Electronic Claim Submission.*
- ✔ *Proof the system can reduce Accounts Receivable by 40-60%, even when replacing existing systems.*
- ✔ *Assurance your office can be "on-line" in only 8 hours of on-site training.*
- ✔ *Medicare/PA Blue Shield Preferred VIP recognition.*
- ✔ *Excellent support and update service, including a 24-hour Bulletin Board Service.*
- ✔ *Affordability.*

data conversion costs if you already store information on a computer.

What factors should I consider when establishing a budget for computerization?
It's not necessary to spend $10,000 for a consultant if you are just purchasing your first personal computer (PC). Then again, even the smallest practice will need to spend $5,000 to $10,000 for a basic system. Software prices can literally range from $99 to $1 million.

As you aim for the best quality for the best price, the size, speed, and number of components you need will all affect your costs. Once you have established your price range, however, you can narrow your choices.

What other expenses can I expect?
Understand that there is much more to automating than simply buying the hardware and software. You need to consider maintenance, upgrades, support staff, insurance, backups, off-site storage, and consumable supplies such as paper, ribbons or toner, tapes, or diskettes.

What aspects should I keep in mind in addition to price?
Don't forget to consider the layout and traffic pattern of your office. Think about where the system will be used and whether printer noise will be a problem.

Your storage and memory needs will affect the cost, installation, and speed of operation. Don't forget to determine the processes and costs involved in expanding the capabilities of your system in the future.

Prepare your staff for automation: Talk about what the system can do to help in the office. Address staff concerns and natural anxieties associated with using a new system. Find out how much training and support prospective vendors offer—depending on your staff, you may need additional training or very little.

How can I avoid "getting burned?"
For your own protection, you will want to issue a request for proposal (RFP) that describes your needs, defines your requirements, and provides for selection criteria. This is as simple as drafting a letter or a list of questions that every vendor must answer uniformly.

An RFP is important because it defines your expectations and becomes a legal document you can enforce if you are not satisfied. There have been some real horror stories of people buying expensive systems that do not do what the customers wanted. If you have nothing in writing, you have no recourse.

What should my RFP include?
Start with an introduction and a statement of the problem you want solved. List your requirements in the areas of business function, technical, economic, and vendor performance. Include your selection criteria and mandatory needs, and don't forget to state your financial and reference requirements.

How do I evaluate the vendor proposals?
Standardization is the key. You want to be able to compare "apples to apples" to the best degree possible.

Ask for a full set of costs and a detailed background on each firm. Request references and be sure to check them. Ideally, try to verify their performance with someone other than those listed, even though this is hard to do.

Your goal is to identify a firm that is well-established, adequately staffed, and available for future support. Begin by asking vendors to provide you with the name of a practice that is using the software you are interested in, visiting the practice while the equipment is in use, and speaking with the physicians and office manager about their system's performance.

Keep in mind what you want and how much you are willing to spend; then, select three finalists and ask for demonstrations.

What can I expect from a demonstration?
Have each of the three contenders come in one at a time and set up their systems. In the ideal world you would use each system for a few months in your own environment and evaluate them. (Yes, this will take time.)

At the minimum, you need to be able to determine if the system meets all of the functional aspects of what you want it to do. You have to ask yourself if this is a good technology or company to invest in, and weigh whether it is leading edge or likely to become obsolete. Each will have its own set of advantages and disadvantages.

You should set the agenda and control the sales demonstrations. Look at what you want instead of allowing the salespeople to present what they want to show you. Then, rank the vendors, and start negotiating.

How much leeway do I have during negotiations?
Everything is negotiable: price, training, installation, maintenance fees, extended

warranties, data conversion, and installation.

What else do I need to think about?
Prepare your implementation procedures based on your earlier plan. This will include site preparation, personnel assignments, training, acceptance testing, and integration planning. This may involve multiple vendors, so be sure to test all aspects of the system.

How can I protect my interests at this point?
It is important to have written agreements concerning the hardware purchase and maintenance, and the software licensing or purchase and maintenance. Incorporate all sales literature and correspondence into your agreement. Since this purchase represents substantial investment, it's best to hire a lawyer for this process. Remember, the sales representative will be telling you how smoothly things will go. However, things almost never go the way everyone wants them to go.

Don't forget to keep a written record of your expectations and all vendor promises, including a comprehensive definition of vendor service and support. Test for response time (volume), functionality (does it do everything you want it to do?), reliability, and disaster recovery.

It is common practice to withhold 10 percent to 15 percent of the purchase price until you are fully satisfied with the setup.

What is the most important step I should take right now?
Make sure you set a deadline for implementing your plan or—rest assured—it will never get done.

How to order the software comparison

The Pennsylvania Medical Society's *Practice Management Software Comparison* is a 62-page guide which is updated annually and contains an evaluation of several top software products and vendors, a glossary of computer terms, and extensive checklists to prompt you during the planning stage.

The guide is free to State Society members, and available for $35 to nonmember physicians and $50 to others. To order the most current edition, call the Society's Department of Physician Services at (800) 228-7823 or (717) 558-7750.

Windows of Opportunity

TriMed is the only nationally marketed practice management software written for Windows that provides a full-featured practice management system that includes patient billing, insurance claim generation, electronic claims submission, graphical appointment scheduling and practice report analysis. There are no hidden fees or additional modules to purchase. All of the above features are included in the program. A simple click of the mouse button allows you to transfer from a patient profile to an insurance profile, or from a patient treatment to the appointment scheduler.

BENEFITS

1. Easy to Use 2. Easy access and transfer
3. Unlimited reporting 4. Saves processing time
5. Electronic Claims 6. Accurate tracking of accounts receivables

The Concept of Futility

As technology has expanded our ability to prolong physical existence, the futility of continuing medical treatment in certain cases has come under increasing debate. The articles that follow present two sides of the argument: one maintaining that the decision about futility should remain with physicians, the other urging that physicians offer care in certain circumstances no matter what their personal views. These point-counterpoint articles (see pages 20 and 26) stimulate further discussion and thought on futility—a concept that has become increasingly important as the health care system assesses its use of medical resources.

Futile Care: Physicians Should Not Be Allowed to Refuse to Treat

Robert M. Veatch, PhD, and Carol Mason Spicer

Eighteen years after the era of Karen Ann Quinlan, the debate over futile care has shifted. Now some patients are asking for treatment that caregivers believe to be useless. In virtually all cases of so-called futile care, the real disagreement is not over whether a treatment will produce an effect; it is over whether some agreed-on potential effect is of any value.

An obvious reason to resist providing care believed to be futile is that it appears to consume scarce resources and therefore burden others. However, for care that affects the dying trajectory but appears to most of us to offer no benefit, the proper course is for society—not clinicians—to cut patients off.

Under certain circumstances patients should have the right to receive life-prolonging care from their clinicians, provided it is equitably funded, even if the clinicians believe the care is futile and even if it violates their consciences to provide it. Society is not in a position to override a competent patient who prefers to live even if life prolongation is burdensome. For incompetent patients, if a clinician believes a treatment is actually hurting a patient significantly, he or she may appeal to a court to have it stopped.

A society that forces people to die against their will produces more offense than one that forces health care providers to provide services that violate their consciences. And medical professionals have a social contract with society to control the use of medical, life-prolonging technologies. Thus clinicians should be obliged to render the desired care if at least the following conditions exist: an ongoing patient-physician relationship, no colleague capable and willing to take the case, a clinician competent to provide the desired service, equitable funding, and the care is predictably life-prolonging. (*See article, page 20.*)

Patients Do Not Have a Right to Demand Medically Useless Treatment

James F. Drane, PhD, and John L. Coulehan, MD

Traditionally, applying the principle that physicians do not provide treatments when the interventions at their disposal do not produce medical benefits has been relatively straightforward. However, with the growing importance of patient autonomy and informed consent in treatment decisions, ethicists must now balance this principle with the principle of patient self-determination.

A patient's right to choose or refuse treatment is limited by the physician's right (and duty) to practice medicine responsibly. Bizarre or destructive choices made by a patient are not sacrosanct simply because the patient made them. In some cases, physicians may choose not to act on patient decisions that appear to be unreasonably destructive.

Physicians also have a right to refuse to provide futile treatments (i.e., interventions that might be physiologically effective in some sense but cannot benefit a patient). Patients themselves have a right to provide input into what would constitute a "benefit" for them, but physicians should be able to decide when a particular treatment is futile based on their knowledge of the treatment's effects and its likely impact on a patient's quality of life.

Ethical rules covering futility can be developed based on socially sanctioned standards of rationality and traditional physician-based values. Clarifying the concept of futility and establishing defensible ethical policies covering futility are important steps toward eliminating unhelpful, medically inappropriate practices. (*See article, page 26.*)

Futile Care: Physicians Should Not Be Allowed to Refuse to Treat

Robert M. Veatch, PhD
Carol Mason Spicer

In the first article of this point-counterpoint series addressing the futility of care, the authors urge physicians to offer care in certain circumstances no matter what their personal views.

Americans are in the midst of a great reversal in medical ethics. We have come a long way from the era of Karen Ann Quinlan, when patients and their families were desperately trying to get treatment stopped. At that time clinicians believed they had a moral duty to treat to the last gasp. The outcome of that debate was a patients' rights movement, which gave patients the right to refuse medical treatment, even if refusal would lead to death. It also gave families the right and the responsibility to function as surrogates for patients, trying to do what patients would have wanted, when patients' wishes are known, and trying to determine patients' best interests in cases where they are not.

Now, 18 years later, the debate has shifted. Some patients are asking for treatment that some caregivers believe to be useless. Some patients insist on receiving what physicians believe to be "futile care," others are arguing that physicians should have the right to refuse to provide care they deem futile.[1]

Reprinted with permission from *Health Progress*, December 1993. Copyright: Catholic Health Association of the United States.

Dr. Veatch is director and professor of ethics, and Ms. Spicer is editor,* Kennedy Institute of Ethics Journal, *Kennedy Institute of Ethics, Georgetown University, Washington, DC.

Medically inappropriate: a misnomer

On December 14, 1989, 86-year-old Helga Wanglie slipped on a rug and broke her hip.[2] She was treated at Hennepin County Medical Center in Minneapolis. She developed a series of respiratory tract infections and was placed on a respirator from which physicians were unable to wean her. She was transferred to a nursing home, where she suffered cardiac arrest and was left in a persistent vegetative state (PVS), on a ventilator and nasogastric tube. The health care team's unanimous conclusion was that the treatment was futile and "medically inappropriate."

But what can medically inappropriate mean here? It is morally reasonable to support the withdrawal of ventilators or even feeding tubes in such cases. But calling the inappropriateness "medical" tells us absolutely nothing and, in fact, perpetuates a serious philosophical mistake that has horrendous implications.

If continuing treatment is inappropriate, it is inappropriate religiously, philosophically, or morally, but medically the treatment has a definite effect. It clearly prolongs her life and is therefore efficacious.

Two basic distinctions

To understand the debate over futile care, two basic distinctions must be made:

- a critical distinction between physiologically futile care and "normatively futile care"; and
- a distinction between denying so-called futile care on the basis of allocating scarce resources and denying it on the grounds that it violates caregivers' integrity.

Physiological Versus Normative Futility: Some interventions labeled futile are really without physical effect. This is what Stuart J. Youngner has called "physiologically futile treatment."[3] Such treatment will not produce the effect sought by the one insisting on it. This must be distinguished from care that has the anticipated effect but is believed by someone to be of no net benefit. We will call this second kind of futility "normative futility" because it involves a value judgment that the effect is of no benefit.

Physiological futility is more or less a question of medical science. We say "more or less" because every scientific question involves some value judgments (e.g., a choice of p values and a choice of the concepts used to describe the effects). In rare instances, clinicians will disagree over the facts because of these hidden value disputes. Lay persons may also disagree with clinicians over such matters. To the extent that they do, it is not irrational for society to require care that

physicians have deemed physiologically futile. That occurs only in unusual circumstances, however. In virtually all cases of so-called futile care, the real disagreement is not over whether a treatment will produce an effect; it is over whether some agreed-on potential effect is of any value.

To distinguish physiological from normative futility, ask the question: Is the disagreement over the science (the judgment about what the effect will be) or over the value of the agreed-on outcome? We can presume that clinicians are correct on the science, but also that they have no special claim to expertise on the value of the outcomes.

Rationing Versus Integrity: A second distinction is also important. There are two separate reasons to be concerned about patient demands for care deemed futile: issues of rationing and of caregivers' integrity.

First, an obvious reason to resist providing care believed to be futile (in either sense) is that it appears to consume scarce resources and therefore burden others. Our communal resources are inevitably scarce. Surely, if a treatment's benefits are so debatable that most of us consider them to be nonexistent, that is an obvious place to cut. But that does not mean it is a clinician's role to do the cutting.

We have acknowledged the legitimacy and necessity of rationing health care,[4] provided it is done equitably and with full public participation in decisions. But historically the clinician's job has been to help patients, not to act as society's cost-containment agent. This gatekeeping role must be someone else's task. Just like a defense attorney's role in the legal system is to advocate for a client—even an unworthy client—a clinician's job in the medical system is to advocate for his or her patient.

We agree that care without effect should not be funded on scientific grounds. A clinician should not be permitted to authorize treatments that he or she is convinced will not produce the effect a patient or surrogate seeks. In fact, insurers who receive requests for reimbursement for such care ought not to pay for it. However, for care that affects the dying trajectory but seems to most of us to offer no benefit, the proper course is for society—not clinicians—to cut patients off. Subscribers to insurance should have a strong interest in limiting care that offers little or no benefit and should agree to exclude such coverage from their plans.

For example, most Americans apparently believe that providing continued, long-term life support serves no purpose for a patient who is in a PVS. Insurers or health maintenance organizations (HMOs) should ask whether subscribers want to include long-term support for PVS patients in their coverage. Insurers should be able to explain what premiums would be if coverage for PVS treatment is and is not included. Insurers should not care whether subscribers vote PVS treatment in or out as long as they set an appropriately larger premium if such treatment is included.

We believe that most subscribers would vote PVS treatment out. The minority of subscribers who have an interest in such care can decide to buy supplemental insurance (a PVS rider) or to pay for the care out of pocket. If the insured group votes to include the coverage, or if individuals self-fund or buy supplemental coverage, then there is no unfairness to society as a whole. We can call this "equitable funding."

Helga Wanglie was an HMO member. HMO administrators should have asked her and her fellow subscribers whether they wanted to fund care for PVS patients. However, the HMO was explicit in its willingness to provide the funding for the care. There was thus no economic reason why the hospital or the individual physicians responsible for Helga Wanglie's care should have felt compelled to resist on grounds of allocation or resources. Also, at the time there were no noneconomic demands—a scarcity of time or of beds—that would force a rationing decision. Had there been such scarcities, the institution would have had a moral obligation to make allocational choices.

Concern about a scarcity of resources, however, is increasingly not the reason physicians want to limit care they deem futile. More commonly physicians want to protect the "integrity" of the physician who feels that it violates professional norms to deliver care that will do no good. We argue that under certain circumstances patients should have a right to receive life-prolonging care from their clinicians, provided it is equitably funded, even if the clinicians believe the care is futile and even if it violates their consciences to provide it.

This is a serious conflict, and we do not endorse such a position lightly. But clearly in some cases a physician must be obliged to violate his or her conscience. Consider, for example, someone raised as a racist who sincerely believes that it is wrong to provide medical treatment for racial minorities. The mere fact that the prejudiced belief is held sincerely surely would not permit the physician to refuse to treat all members of minority groups.

→

"We argue that under certain circumstances patients should have a right to receive life-prolonging care from their clinicians, provided it is equitably funded, even if the clinicians believe the care is futile and even if it violates their consciences to provide it."

It is similarly clear that patients cannot be allowed to receive any medical treatment that they happen to crave. Certain conditions will have to be met before the duty to provide care deemed futile will prevail. We will detail these conditions later in this article, but first we will explain the moral reasons why some patients may have a legitimate claim to care that physicians believe will do no good.

Moral complexities surrounding a duty to treat

Let us return to the case of Helga Wanglie. She and her husband were members of the right-to-life movement. Previously she had told family members that she would never want anything done to shorten her life. Her husband is quoted as saying, "I'm a pro-lifer; I take the position that human life is sacred."[5] He said that his wife of 53 years felt the same way. Their daughter agreed.

"A patient must be conscious to be burdened in any real sense. It is difficult to understand how Helga Wanglie or Karen Quinlan can be burdened by continued life support."

There was no dispute about the medical facts. The physicians and the Wanglie family agreed that she was permanently unconscious, that providing a ventilator and nasogastric tube would prolong her life, albeit in a vegetative state. The only question was the value of vegetative life.

A Comparison with Quinlan: Compare this "futile care" case with the classic treatment refusal case of Karen Ann Quinlan, the young woman who in 1975 suffered a respiratory arrest that left her in a PVS.[6] Her physician, Robert Morse, was absolutely convinced that a ventilator believed necessary to preserve her life was providing benefit. He considered it "medically appropriate," claiming, probably incorrectly, that letting a permanently vegetative patient die violated the professional standard of the time.

The most critical issue in the court battle was whether a clinician's judgment about benefit for a patient could take precedence over a patient's or surrogate's assessment of benefit. Karen Quinlan's family and lawyer successfully argued that a professional consensus about whether an effective treatment was beneficial was irrelevant. Her father was, in effect, given the power to decide whether his daughter would consider this treatment beneficial.

The Quinlan and Wanglie cases, despite the seemingly opposite values of the decision makers, are similar in that both involved an assessment of the value of vegetative life. This assessment is fundamentally not a technical medical matter. Different people with different beliefs and values can come to different conclusions about whether ventilating a permanently vegetative patient is a benefit. When a patient is competent, he or she has the right to decide. When the patient is not competent, then the designated surrogate has the responsibility to try to determine what is best.

The two types of cases differ, however, in that the moral issue confronting physicians in futile care cases is whether patients or surrogates who make the decision that such care serves a worthwhile purpose have a right to insist that it be provided and, if so, on what basis.

Autonomy Problem: Some defenders of the right to access make the mistake of claiming that the moral principle of autonomy confers that right. Autonomy gives a patient a right to refuse treatment. By extension, it even gives family members a limited right to decline treatment on a patient's behalf. But that does not imply that autonomy can give the patient a right of access. There is a lack of symmetry. Autonomy is a liberty right. A patient has a right to cancel the patient-physician relationship and, at least metaphorically, walk away. But in so far as autonomy is relevant, it also should give a provider the right to sever the relationship. Autonomy cannot be the basis of the claim to a right to access.

Burden of Futile Care: A second complexity in the argument concerns the possibility that acting on the demand for care deemed futile might impose excessive burdens on a patient. Clinicians evaluate some care not only as providing no benefit, but as actually harming a patient. But if harm refers to pain and suffering, a patient must at least be conscious for harm to occur. It is difficult to understand how Helga Wanglie or Karen Quinlan can be burdened by continued life support. There may well be moral offense if, for example, the life support is administered against a patient's wishes, but a patient must be conscious to be burdened in any real sense.

If a patient is mentally alert, he or she could perceive burden, but if the patient is mentally competent, it is the patient's judgment of burdens and benefits that must prevail. The patient is the one who will suffer the burden and die if treatment is forgone. Surely, society is not in a position to override a competent patient who prefers to live even if life prolongation is burdensome. Only a monstrous society would permit a physician to impose death on a patient who wants to live because the physician believes the patient would be better off dead.

**Presbyterian Medical Center designates this continued medical education activity for 2 credit hours in Category 1 of the Physicians' Recognition Award of the American Medical Association and the Pennsylvania Medical Society Membership requirement. Nine sessions, 18 credits.*

The same rationale applies to persons who are mentally incompetent and who have expressed their wishes while competent, but what about those who have never expressed their wishes while competent? If a clinician believes treatment is actually hurting a patient significantly, he or she may appeal to a court to have it stopped.

Courts routinely override parents and guardians who refuse treatment when the refusal seems to harm a patient (e.g., Jehovah's Witness parents who refuse lifesaving blood for their children).[7] No court has yet ruled that parents or guardians can be guilty of abuse by insisting on futile care for a ward who is made to suffer by continuing treatment that is not only futile, but, on balance, gravely burdensome. Someday soon one may. But a judge, not a clinician, should determine the care to be unacceptable. Even if a clinician believes there is a burden on an incompetent patient, he or she should continue treatment until authorized to stop.[8]

"Effective, nonburdensome, life-prolonging care is always morally required if a patient or surrogate desires it."

Consider the case of Baby L.[9] She had fetal hydronephrosis and oligohydramnios, leaving her blind, deaf, and quadriplegic, with a gastrostomy and recurrent pneumonia. At two years of age she had the mental status of a three-month-old and had had four cardiac arrests. But she was conscious and could feel pain. Her mother insisted on life support, but the medical staff opposed mechanical ventilation and cardiovascular support, which they thought was "futile" and "inhumane."

The treatment was clearly preserving Baby L's life. She had lived for more than two years. The real issue was whether it was normatively futile.

There are good reasons why this treatment should be considered disproportionally burdensome. Nevertheless, a clinician has no *medical* basis for deciding that the effective treatment does more harm than good. Only a public agency with due process has that authority. If a clinician believes that an incompetent patient is being harmed by futile care demanded by a surrogate, the clinician's duty is to try to get the surrogate overridden.

John J. Paris and colleagues treat the Baby L case as a paradigm futile-care case. However, this is a special case. The patient has never been competent to evaluate the burdens, and the burdens could well exceed the benefits. But even in these circumstances the clinicians cannot withdraw the life support on their own. It is appropriate and reasonable to try to get a court order to stop, but this is different from simply deciding to overrule the mother's judgment about the burdens and benefits of the life support.

Futile care for patients who are not being harmed

Cases involving burden to incompetent patients are really not the essence of the futile care debate, however. The real issue is futile care for patients who are not being harmed. This is true futile care (i.e., care that produces neither benefits nor burdens for a patient). For the moment let us simplify the analysis by limiting the discussion to interventions that will predictably prolong life.

Clinicians always have the right to withdraw from a case, just as a competent patient might, provided someone else is willing to take the case. It is in neither a patient's nor a physician's interest to insist that the original physician continue. But if no colleague is willing to step forward, the treatment is life prolonging, and the treatment will not be burdensome, then a licensed professional responsible for and capable of providing the care has a duty to provide it even if he or she is morally opposed. Otherwise that clinician would have to argue that the patient is better off dead even though the patient is not being injured and even though the patient or surrogate disagrees. Effective, nonburdensome, life-prolonging care is always morally required if a patient or surrogate desires it.

But why should physician autonomy be violated in this one case when generally patient autonomy should not be violated? Two arguments can be offered: the argument from offense and the argument from contract.

Argument from Offense: If a patient or surrogate is demanding life-prolonging care that his or her clinician believes is futile and a violation of his or her integrity to provide, we have a head-on clash between a patient's or surrogate's choice for life and the provider's autonomy. A society that forces people to die against their will produces more offense than one that forces health care providers to provide services that violate their consciences. If society must offend, the lesser offense is preferred.

Argument from Contract: The second argument rests on the notion of the social contract or covenant between medical professionals and society. Licensed pro-

fessionals are the only members of society licensed to control the use of medical, life-prolonging technologies. When they accept licensure, they accept a public trust to use their monopoly on medical knowledge to preserve lives when the appropriate decision makers want them preserved.

Imagine that society is contemplating creating monopoly control over certain life-prolonging technologies. Further, imagine that there will be cases in which a minority desperately wants these technologies used while a majority does not see any value in their use. Finally, imagine that we cannot know whether we will be in the majority or the minority. We believe a rational society will extract, as a condition of licensure, a promise that the clinician will use these technologies for people who want them.

Of course, some conditions would be attached to such a promise. These might include:

1. An ongoing patient-physician relationship.
2. No colleague capable and willing to take the case.
3. A clinician competent to provide the desired service.
4. Equitable funding.
5. The care being predictably life prolonging.

At least if all these conditions were met, we believe clinicians would be obliged to render the desired care. All these conditions were met in the Wanglie case. Once the court determined that Helga Wanglie's husband was the proper surrogate, physicians wisely acknowledged their duty to provide the care they believed was futile even though it violated their sense of professional integrity. Once one realizes that the decision to forgo effective, life-prolonging care is a moral choice rather than a technical one, it seems hard to deny the right of the minority to access. If we have created a monopoly in the use of that technology, we would be wise to insist that minority interests be protected by ensuring that holders of minority views can have their lives prolonged. The alternative is to permit physicians to decide that a patient would be better off dead even though the patient is not being burdened and even though the patient or surrogate believes the life should be preserved.

Non-life-prolonging fundamental care

What we have said thus far is limited to care that can be expected to prolong life effectively, at least for a length of time that a patient or surrogate considers worthwhile. The argument for the duty to provide care deemed futile clearly does not extend to all non-life-prolonging treatments that may be of interest to the patient. Some patients' demands are too offensive or too trivial to make them part of the contract between professionals and society. For example, a patient's demand that a surgeon amputate a healthy limb would not have to be honored.

On the other hand, some care that does not prolong life may still be considered so fundamental that physicians would have a duty to provide it. Consider, for example, medication to relieve severe chronic pain. Some physicians may sincerely believe that providing such medication is wrong, for instance, because it may shorten a patient's life. A physician may consider the use of such risky medication immoral, even though Catholic moral theology and much secular thought acknowledges the legitimacy of risking the indirect side effects in such cases. Even if a physician is sincerely opposed, however, he or she may well be expected by society to administer the pain relief, provided no other physician will take the case.

The key is that some interests of patients and surrogates may be recognized as fundamental. Even if a majority would not consider the treatment worth pursuing, that majority might recognize the importance of the minority's claim. Life-prolonging care is fundamental in this way; certain non-life-prolonging care may be as well. If the care is perceived as fundamental, then it should be part of the social covenant between society and the profession. In such cases, as in ones involving life-prolonging treatment, if 1) there is an ongoing patient-physician relationship, 2) no other physician will take the case, 3) the clinician is competent to provide the care, and 4) the funding is equitable, the licensed professional who is given a monopoly over the control of life should be expected to promise to use that technology when patients or surrogates ask for it. ⬡

The Concept of Futility: Patients Do Not Have a Right to Demand Medically Useless Treatment

James F. Drane, PhD
John L. Coulehan, MD

In the second article of this point-counterpoint series addressing the futility of care, the authors maintain that the decision about futility should remain with physicians.

"I will use the dieta [treatment] to help the sick according to my ability and judgement, but never with a view to injury and wrongdoing."

—From the Hippocratic Oath

The norm of beneficence, which directs physicians to apply their insights and techniques for patients' good, has been a basic principle of medical ethics for 2,500 years. Under this principle, physicians do not provide treatments when the interventions at their disposal do not produce medical benefits.

Traditionally, when medical treatment was provided in a paternalistic style (i.e., when physicians made treatment choices without asking their patients' permission), the application of the norm of beneficence was relatively straightforward. Today, however, an ethic of patient autonomy and informed consent has replaced the traditional paternalistic approach that gave maximum authority (as well as responsibility) to the physician. Thus the principle of beneficence must now be balanced with the principle of patient self-determination.

The question we address here is whether the patient self-determination requirement can compel physicians to make futile interventions—treatments they know provide no benefits and therefore violate the beneficence principle. The futility issue can be a key ethical consideration in cases in which the principles of physician beneficence and patient autonomy appear to conflict.

Physician beneficence and patient autonomy

Patient autonomy, or self-determination, is first a right to refuse treatment and then a right to choose from among medically justifiable options. It is not a right to demand treatment. Put differently, a patient's right to choose or refuse treatment is limited by the physician's right (and duty) to practice medicine responsibly. The belief that medical professionals ought to respect the informed choices of patients or their surrogates arises, first, out of respect for autonomy. But it is also a consequence of the realization that beneficence is ordinarily best served when patients can judge for themselves the impact of various treatment options on their life plans and personal goals.

Although patients ordinarily choose a course of action they judge to be in their best interests, sometimes they make bizarre and destructive choices. Such irrational choices are not sacrosanct simply because the patient made them. Commitment to beneficence demands at least that physicians try to understand patients' intent and motivation and to influence them to make a rational decision. In some cases, physicians may choose not to act on patient decisions that appear to be unreasonably destructive.[1]

Professional discretion and judgment are always part of the clinical decision-making process. Physicians should communicate with patients throughout the treatment process and must monitor patient participation in medical decision making. Physicians, in effect, make judgments about the nature and relevance of patient values, in addition to making value judgments about medical issues. They evaluate patient competency based on patients' responses to medical interventions, their thoughts about their medical situations, and their reasons for deciding one way or the other.

To suggest that doctors abandon all such judgments and then ignore the personal harm resulting from a risky or useless intervention "because the patient asked for it" is to subvert the core of medical professionalism.[2] Medical judgments

are never value free. However, physicians should be aware of the value components of their decisions and be able to justify them.[3]

Value commitments (e.g., relieve suffering, do not assist in suicide, do not harm patients, do not cause suffering without proportionate benefit) inform most physician decisions. These professional standards reflect medical values and guide judgments about the appropriateness of a medical intervention for a particular patient. Among these standards should be the following: Do not offer futile treatments as medical options.[4]

The concept of futility

The concept of futility has had historic importance in medicine. For Hippocratic physicians, attempting a futile treatment was a display of ignorance.[5] Contemporary ethical standards published by the Council on Ethical and Judicial Affairs of the American Medical Association (AMA) show continuity with this tradition: "Physicians should not provide or seek compensation for services that are known to be unnecessary or worthless."[6]

Because the concept of futility has been consistently confused with other concepts and categories, some distinctions are in order. A futile intervention is different from one that is *harmful* (e.g., poison), *ineffective* (like cough drops for a lymphoma), or *impossible* (like a self-administered coronary bypass). Nor is a futile intervention the same as a treatment whose goal is to achieve uncommon or unusual outcomes, like the long-term survival of a patient with metastatic pancreatic cancer. The issue of whether a situation is deemed hopeless is also irrelevant to the issue of futility, since hope is a subjective disposition that can be maintained even in the face of impossible situations. Finally, while certain treatments in certain situations are simply too expensive for a family or a society, it does not help to refer to these as economically futile.[7] Much of the confusion about futility arises when authors claim to be talking about this concept but are actually addressing very different issues.

Some clarity can be achieved by distinguishing futility from ineffectiveness. In contemporary medicine, ineffectiveness is determined statistically on the basis of accepted scientific standards. A 0 percent success rate in 1,000 trials, for example, would constitute an ineffective treatment. Categorizing a treatment as ineffective, however, does not imply 100 percent certainty about its outcome, because the next trial might reveal an effect not evident in the previous 1,000. Another closely related category is *highly improbable*. In this case, a given treatment may have been successful on a few occasions, but its success can neither be scientifically explained nor reliably predicted.

A futile treatment differs from an ineffective or highly improbable treatment in that it is always somewhat effective (e.g., a temperature is lowered or raised, lung function is sustained). However, futile treatments are fruitless because they do not achieve "worth" in the sense of meeting a patient's medical goal or providing a true personal benefit.[8] Doctor-patient communication is sometimes required to know that personal patient benefit cannot be attained, but at other times it is obvious (with the permanently unconscious or dying).

In light of the above distinctions, a medically futile treatment can be more accurately defined as an action, intervention, or procedure that might be physiologically effective in a given case, but cannot benefit the patient, no matter how often it is repeated. A futile treatment is not ineffective, but it is worthless, either because the medical action itself is futile (no matter what the patient's condition) or the condition of the patient makes it futile.[9]

Futility and patient consent

Attempts to determine personal patient benefit or acceptable quality of life ordinarily depend on patient input. Should all futility questions then be left up to patients or surrogates? Do futility decisions fall outside physician discretion?

Some medical ethicists think so.[10] We take the opposite position. Determining futility entails evaluations of a medical intervention and a patient's medical status that only a physician can make. Physicians know, for example, that cardiopulmonary resuscitation (CPR) can do no good for terminal patients whose cardiac arrest relates to the natural progression of their disease.[11] Even if the patient is incompetent and no family is available to provide input about his or her preferences, physicians in consultation with other team members can decide that a particular treatment cannot achieve medical goals, values, or objectives.

The discussion of futile treatments with patients and family is altogether appropriate,[12] except when such a discussion would cause added and unbearable burden to an already difficult situation. The objective of such discussions is to help patients and families understand the clinical situation and why a particular interven-

→

"For Hippocratic physicians, attempting a futile treatment was a display of ignorance."

tion is not an option. The physician should be as responsive as possible to the patient's physical, emotional, and spiritual needs, but neither consent nor refusal should be requested.

The AMA's Council on Ethical and Judicial Affairs upheld this view in deciding that physicians need not seek consent for a do-not-resuscitate order when CPR is deemed futile.[13] Informed consent is a process by which competent patients make judgments about real options and, as such, supposes socially sanctioned standards of rationality. Although some individuals may operate outside these rational limits (e.g., by demanding what is useless or futile), they cannot insist that professional standards and public policies support their preferences.

"The current situation, in which patients or their surrogates are commonly (but falsely) led to believe that futile treatments are medically acceptable, actually does violence to the principle of autonomy, as well as to beneficence."

Beneficence requires that doctors do only what is medically helpful. Individual autonomy cannot be so inflated in importance as to destroy the principle of beneficence. The key to the futility debate is identifying what constitutes legitimate medical help. Like most contemporary medical ethics problems, determining futility requires balancing the values and goals of medicine with the goals and values of patients, taking into consideration the uncertainty inherent in making predictive medical judgments.[14] Inevitably there will be some differences among physicians in judging uncertainty and the helpfulness of specific treatments.[15]

Ethical rules, rationality, and beneficence

Ethical rules covering futility can be developed based on socially sanctioned standards of rationality and on traditional physician-based values. Several such rules are suggested at the end of this article.

Some ethicists argue that allowing physicians to not offer futile treatment to patients would constitute an unacceptable return to paternalistic medical practice. They hold, in effect, that physician assessments of benefit are always suspect, and that benefit is so inherently subjective that even the most idiosyncratic patient or surrogate choices must be honored.

Obviously, a physician's decision will reflect his or her values. A professional physician's value judgment, however, will be neither random nor individualistic. If doubt is raised about an instance of physician decision making, the decision can be reviewed by an ethics committee to make sure that beneficence and not some selfish value is operating.

An extreme autonomy position ignores the fact that a well-established "best interest" standard assumes both a connectedness of the patient to family and physician and a communication process that allows surrogates to decide based on objective, community-based best interest standards.[16] The existence of such standards and their relevance to medical decision making can be seen from the fact that five state courts recently permitted foregoing life supports for incompetent patients who had never expressed a previous preference.[17] Without available subjective preference, the decisions were made on physicians' and families' objective evaluations of a patient's best interest.

The current situation, in which patients or their surrogates are commonly (but falsely) led to believe that futile treatments are medically acceptable, actually does violence to the principle of autonomy, as well as to beneficence. It creates a sphere of decision making where (rationally) none exists and, thus, seems intrinsically deceptive.

Frequently, physicians believe they have done their duty when they allow patients or families to make difficult treatment decisions, even when they have not explained sufficiently the medical and human consequences of the options. In such cases the focus on patient choice diminishes the physician's commitment to professional duty and patient well-being. Thus we believe that respect for autonomy and beneficence is impaired by allowing patients to choose futile treatments or by claiming that the concept of futility is so inherently subjective that it is useless.

Weakening futility as a workable category has other ill effects. Aggressive treatments that override considerations of futility are frequently justified by standards requiring absolute certainty and by fear of malpractice. Clarifying the concept of futility and establishing defensible ethical policies covering futility are important steps toward eliminating unhelpful, medically inappropriate practices. Even the famous Baby Doe regulations of the Reagan administration, which advocated aggressive medical interventions for infants in almost all situations, recognized an exception for futility and virtual futility, when medical goals could not be achieved and quality of life had slipped below what is considered acceptably human.[18]

The Helga Wanglie case

The Helga Wanglie case did for the futility issue what the Nancy Cruzan case did for the question of medical alimentation.[19] Wanglie, an 85-year-old nursing home resident, was transferred to a hospital after suffering a heart attack. She had been re-

suscitated but remained unconscious and on a respirator. Physicians at that hospital considered continued technological life-sustaining support to be futile and wanted to withdraw it. Wanglie's husband refused and had her transferred to another medical center, where she was diagnosed as being in a persistent vegetative state. Again doctors recommended withdrawal of the ventilator because no medical goals for the patient could be realized.

The family thought the suggestion of withdrawal of life-sustaining technologies reflected moral decay in our culture and hoped instead for a miracle. Ultimately, the hospital went to court to ask whether medical professionals were obliged to provide what they considered to be unbeneficial and inappropriate treatment. The husband (a lawyer) then crossfiled, asking that he be appointed conservator. The court decided in favor of the husband's petition. More than a year after the initial hospitalization, and three days after the court decision in favor of Mr. Wanglie, Helga Wanglie died of multisystem organ failure and septicemia.

Once the Helga Wanglie case was taken to court, we could have expected that the values of the courts would inform its judgment. The judge did not address the issue of medical values or physician discretion in medical practice. Rather, he ruled that the husband was the proper surrogate and that the surrogate's claims about the patient wishes were reliable. In a culture ruled by individual rights and a purely subjective view of autonomy, the surrogate's freedom to decide about treatment held priority over physician or professional judgment about the treatment's futility.

If Helga Wanglie had actually wanted her treatment, it could be argued that she was getting some "benefit" from continuing it in the face of futility. (There is good reason to believe she did not want it.) But this kind of "benefit" is not what is meant by benefit in the history of medical ethics. Personal medical benefit consists of such advantages as restoration of health, cure, pain relief, comfort, alleviation of suffering, and improved well-being or quality of life. The principle of beneficence calls on physicians to help patients achieve those particular goals, not just any goals or any interests.

For traditional standards

Futility and physician discretion arguments will increasingly be crowded out by another influence on physician discretion—cost. The need to control medical costs will require that strict statistical measures of effectiveness be used to limit the options physicians can offer.

But independent of limitations on treatment options that might be imposed by considerations of justice and public policy, we have shown that an analysis based on beneficence allows physicians to refuse to offer—in fact, makes it their duty not to offer—futile or ineffective treatments. Futile and ineffective treatments are not acceptable or advisable even if they can be afforded.

The idea that a right exists to futile treatments is absurd, especially when there is not enough money for basic care for millions. Physicians and health care institutions need to make a stand for traditional medical rights and professional standards. ⬡

"Patient autonomy, or self-determination, is first a right to refuse treatment and then a right to choose from among medically justifiable options. It is not a right to demand treatment."

Ethical Guidelines for Determining Futility

- A treatment is futile and the physician should not present it to a patient or surrogate as an option when, for example, the treatment:
  1. Does not alter a person's persistent vegetative state.
  2. Does not alter diseases or defects that make a baby's survival beyond infancy impossible.
  3. Leaves permanently unrestored a patient's neurocardiorespiratory capacity, capacity for relationship, or moral agency.
  4. Will not help free a patient from permanent dependency on total intensive care support.
- Because they require assessment of medical interventions and their relation to medical goals, decisions about futility are made by physicians, even though they involve considerations of patient benefit or patient quality of life. Some quality-of-life judgments are linked with traditional medical goals and values and assume public standards of rationality.
- Because medicine is directed to patient benefit, not everything a doctor can do falls within the ethical goals of medicine.
- Futility always involves a failure to achieve a medical goal or a personal good. If patients do not benefit in a medical sense, even temporarily effective treatments are futile and physicians have a right (indeed a duty) based on the principles of beneficence and nonmaleficence not to offer them.

Medicine Should Reorder Its Priorities

David S. Masland, MD

Although many entities contribute to the escalating cost of health care, the author of this opinion article believes physicians have two significant alternatives when it comes to health care costs: They can continue to be a major part of the problem, or they can take the lead in rolling back the cost of medical care.

The recently published book, *Bankruptcy—1995*, predicts that the United States will be broke by 1995 unless spending in all areas is brought under control now. While the author may be in error on the year, his thesis is brilliantly defended. The national debt is rapidly approaching the point at which interest on the debt will lead to irreversible bankruptcy no matter what steps are taken.

The cost of medical care to the government is one of the major factors in this equation. Of the roughly $800 billion a year spent on medical care in the U.S., 43 percent, or roughly $350 billion, is spent directly by the government. The total amount spent on medical care is close to 12 percent of the gross domestic product. It is a figure that must be reduced if the nation is to remain solvent.

The crisis in medical care costs looms even larger because medical inflation has risen every year in recent history by double digits—even as inflation in all other areas has been at the lowest levels.

What fuels the fires of inflation under the medical care cauldron? A host of factors play a part:

- an insurance system that serves as a buffer so that patients don't know the cost of services;
- an aging population;
- an ever-increasing demand for services from a public with unrealistic expectations;
- a proliferation of high-tech, high-cost tests and procedures;
- socioeconomic factors such as poverty, illiteracy, drug and alcohol abuse, and substandard housing, to name a few; and
- a rate of increase in the cost of medications, medical supplies, and medical services far beyond the rate of increase in the overall cost of living.

Other factors include:

- the high cost of medical education;
- a proliferation of administrative activities and paperwork (some experts attribute 25 to 30 percent of medical costs to this);
- increases in premiums for malpractice insurance;
- the practice of defensive medicine; and
- the shortage of primary care physicians, especially in rural areas and inner cities.

Are physicians victims of these circumstances or perpetrators in the escalation of the cost of medical care in the U.S.? From the earliest history of medicine, physicians have acted in the best interests of their patients, self-imposing a strict code of ethics dating back to ancient Greece and expressed succinctly in the dictum, "Primum non nocere" (First of all, do no harm). As a result, most people have believed that doctors know what is best and have accepted their advice almost without question in making treatment decisions.

Traditionally in this country, community groups, working together, supplied medical care to those unable to pay for it. Physicians willingly gave their time, hospitals supplied the place, and voluntary organizations played an important role. The care provided was superb, not merely equaling but perhaps surpassing the care given to private patients. This tradition continued through the Great Depression of the 1930s. Thus, physicians experienced the sheer joy of caring for patients who would not otherwise receive medical services.

The hospital industry, the medical profession, government, and other interested organizations sought ways to assure medical and hospital care at low cost to those in society who could not afford it. Thus, nonprofit health insurance companies, Blue Cross and Blue Shield, came into ex- →

presents

"COMMON G. I. PROBLEMS EMPHASIZING MANAGEMENT"

MARCH 19, 1994

ADAM'S MARK HOTEL

City Line Ave. and Monument Rd., Philadelphia, PA

8:00-9:00	**REGISTRATION AND COFFEE**
9:00-10:30	**NUTRITION—MODERATOR: GARY M. LEVINE, MD** Constip., diet & Drug Mgmt.—F. Goldstein Diet in Ca.—J. Katz Nutri. Magmt. of IBD—G. Lichtenstein Hyper. Al.—S. Peikin
10:30-10:45	**COFFEE**
10:45-12:15	**INFLAMMATORY BOWEL DISEASE AND COLON—Moderator: PHILIP BRALOW, MD** Newer RX—H. Clearfield Divert. Disease—J. Deren Inher. of Ca & Polyps—P. G. Traber Prev. & Rx of Steroid Osteo.—N. Kelepouris
12:15-1:15	**LUNCH**
1:15-2:45	**PEPTIC ULCER DISEASE—MODERATOR: WALTER RUBIN, MD** Long Term Rx of GERD.—D. A. Katzka Non Ulcer Dyspepsia—R.S. Fisher Hypersecretory States—W. Lipshutz Newer Rx's—A.J. DiMarino
2:45-3:00	**COFFEE and COKE**
3:00-4:30	**LIVER—MODERATOR: C.A. BRASS, MD** Rx of Ascites—G.B. Benson Alpha Interferon—M. Black Auto-immune Hepatitis—C. O'Brien When to refer pt. for transplant—M. Zern

Instructional Objectives:

A) To enable the practicing physicians to recognize which patients to evaluate for transplantation and Interferon therapy.

B) To understand the problems of the recalcitrant ulcer and its management.

C) To recognize those patients who are in need of surveillance for colon ca.

Jeanes Hospital is accredited by the Pennsylvania Medical Society to sponsor continuing medical education for physicians. Jeanes Hospital designates these continuing medical education activities for six (6) credit hours in Category 1 of the Physician's Recognition Award of the American Medical Association and the Pennsylvania Medical Society Membership. **6 hours**

American Osteopathic Association Category 2-A **6 hours**

All Faculty participating in Continuing Medical Education programs sponsored by Jeanes Hospital are expected to disclose to the program audience any real or apparent conflict(s) of interest related to the content of their presentations(s).

Registration: $80.00
(with CME Credits)

Retired Physicians and Physicians in Training $25.00
G.I. Assistants $25.00

Luncheon & Syllabus Included

MAKE CHECK PAYABLE TO: "PHILADELPHIA G.I. GROUP" and mail to:

Norman N. Cohen, MD. Program Chairman
Mercy Catholic Medical Center
Fitzgerald Mercy Division
Lansdowne Avenue & Baily Road
Darby, PA 19023

istence with special enabling legislation in the various states. History shows that company-paid health insurance became a goal of organized labor, and the concept quickly spread throughout the nation's basic industries, both organized and unorganized.

Wanting a piece of the action, private insurance companies entered the competition for the premium dollar. With the advent of Medicare and Medicaid in the mid-1960s, nearly all groups in society had some form of medical care coverage.

Physicians have always earned a decent living from their work and are entitled to do so. But they differ from other purveyors of goods and services—physicians publicly promise to do that which is good for their patients. Yet, market solutions to the cost crisis in providing medical care have forced physicians to become economists.

"It is time for organized medicine...to move to cut physicians' fees for tests and procedures, and to discourage the use of unnecessary tests and procedures..."

Only a few physicians today are involved in giving care to those in need. And physician satisfaction from the practice of medicine has decreased almost in direct proportion to the onset of the application of economic standards as a measure of success. There is less joy in the physician's vocation now that success is measured in dollars.

So we have come full circle. Fees have reached an inappropriately significant level in the field of medical care. The very nature of the payment system of Blue Cross and Blue Shield led to ever-escalating costs. As premiums skyrocketed, individuals and small businesses opted out of health insurance programs. As hospital costs and physicians' fees increased, so did the cost to government as well as to individual citizens. Millions of Americans went without health insurance, and new problems developed for government programs already straining to meet the burgeoning costs.

American medical care is the best in the world—for those who have access to it. But in our heterogeneous society, and given the current crisis in insurance coverage, the outcome figures are skewed because large groups of Americans do not use the care available, and far too many do not have adequate coverage. The socioeconomic factors referred to earlier have an impact. There are serious access problems for the large pockets of black and Hispanic people living in the inner cities and for millions of other Americans without adequate coverage.

For physicians, there are two significant alternatives. On one hand, they can continue to be a major part of the problem of escalating costs—thereby contributing to a national debt that could very well lead to national ruin. On the other hand, physicians can take the lead—and it won't be easy—to roll back the cost of medical care, thereby taking one small step to secure the nation's economic health in the future.

It is time for organized medicine—physicians acting through their professional associations—to move to cut physicians' fees for tests and procedures, and to discourage the use of unnecessary tests and procedures—in short, to cut costs, because the reality is that medicine has been priced out of the marketplace for millions of people and for the government itself.

If doctors had to face patients directly with charges of thousands of dollars for procedures that take less than an hour of work, the charges would be lowered immediately. But with insurance companies acting as a buffer, charges continue to escalate.

Physicians' fees account, at most, for 20 percent of the cost of medical care. If that $160 billion each year could be cut by 10 percent, it would have a positive impact. Far greater, however, would be the moral impact when a group of respected professionals assume responsibility and take the lead in tackling this huge problem head-on. Hospitals, insurance companies, patients, the government itself, all could be expected to follow suit.

Physicians have it within their power to cut the cost of medical care by two percent. That is significant in itself, but even more significant is that the difference between survival and ruin for the nation could result when one group in society willingly bites the bullet to save the nation.

Fighting the Access to Care Crisis

Maureen Hoepfer

Robert Doe, MD, an emergency physician at Lancaster General Hospital, has been a driving force behind an innovative coordinated care program for Medical Assistance (MA) patients that will soon be implemented in Lancaster County. The program, which was developed by a community task force comprised of physicians, hospitals, business, labor, and the insurance industry, seeks to improve access to care for MA recipients by providing them with a "medical home" and improving the coordination of their care. The Lancaster City and County Medical Society and Dr. Doe, who served as its president in 1992, played vital roles in initiating this countywide effort.

Robert Doe, MD, believes there is an access to care problem in Pennsylvania. "Our access problems have to do with inappropriate access as much as access overall. People today access care in places other than where the most logical source would be. They are going to the emergency department when they should be seeing a family physician. In my opinion, the access issue really revolves around having a medical home for each patient," he explains.

Dr. Doe contends the access to care issue is closely tied to another major problem facing the state's health care delivery system—the lack of continuity of care, especially in the Medical Assistance (MA) and uninsured patient populations. He says these patients often do not have a family physician and many times seek treatment for non-emergency conditions in hospital emergency departments at a greater cost. Also, these patients may see several different providers which may lead to a duplication of services, another costly problem for our health care system.

"Often, these patients haven't learned how, or haven't had the opportunity, to access the system in a more efficient way because they don't have a medical home," Dr. Doe explains. "As an emergency physician, I see it as the coordination problem as much as anything. How do I treat the really sick and injured when I also have to take care of a large volume of primary care cases?"

Creating a medical home

The Lancaster project began approximately two-and-a-half years ago when the Lancaster City and County Medical Society began discussing health system reform. "Figuring that health care reform was coming, it seemed logical to us to find other interest groups that shared our philosophy on the issue, align ourselves to them, and then move forward in developing our own health care reform plan," Dr. Doe says. "Initially, we formed a work group that included the business community and physicians; but we soon realized that we would have to be a lot more inclusive if we were really going to address this issue in a comprehensive manner. So we added representatives from labor, hospitals, and community agencies, as well as consumers and legislators. It eventually became a broad-based community task force."

After six months of work, the Lancaster County Task Force on Health Care, which Dr. Doe chaired, produced a document on national health system reform. According to Dr. Doe, the document contained several basic concepts:

- The medical home and primary care are important elements in improving coordination of care and access to care: Every patient needs to have a medical home.
- Administrative streamlines need to be created in whatever new system is adopted.
- The reform process should attempt to fix what is broken and not completely reject what is already working.

"At the end of this process, the task force concluded that we could help fix the health care system if we tackled something that was really broken," Dr. Doe explains. "We figured that the part of Pennsylvania's health care system that was the most broken and in the most

Ms. Hoepfer is a marketing specialist for the Society's Educational and Scientific Trust. This article is one in a series, begun in January 1993 and ongoing through 1994, sponsored by the Trust's endeavor to address public health needs, Keystones of Public Health.

need of repair was the Medical Assistance program."

Medical Assistance reform

From this realization, the task force appointed the Subgroup on Medical Assistance Reform, also with Dr. Doe as chairman. After reviewing the MA program, the subgroup determined that the system was broken for two reasons: 1) patients were accessing care in inappropriate and uncoordinated ways because they did not have a medical home to guide them in finding needed health care; and 2) the administrative side of the system was so burdensome that providers often refused to participate.

"We found a lot of physicians who actually treated Medical Assistance patients without charging them, as if they were uninsured," Dr. Doe says. "So we felt if we could make the system less administratively burdensome and expand it from the current eligibility levels to an eligibility level along the lines of 200 percent of the poverty level, then we could, first, create a more user friendly system which would encourage provider participation, and, second, solve the uninsured crisis."

From the beginning, the subgroup's goals were to realign the MA program into a coordinated health care system using the medical home as a focus of the care, to improve reimbursement for the physicians who provided the medical home, and to eliminate some of the burdensome paperwork involved. The subgroup developed a basic plan, and Dr. Doe brought it before the Pennsylvania Medical Society's Committee on Long Range Assessment in the spring of 1992. Later that year, the Society agreed to officially support the pilot project and arranged a meeting with representatives of the Pennsylvania Department of Public Welfare (DPW).

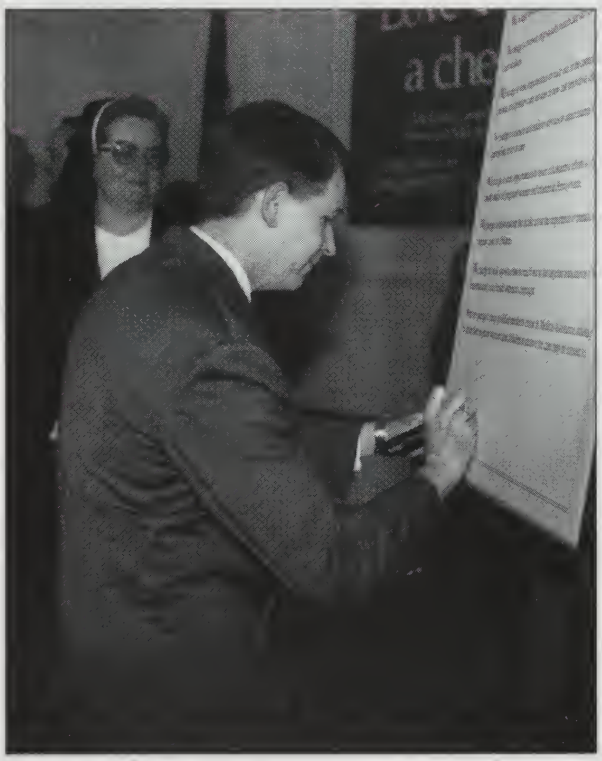
At that meeting, the Lancaster group learned there were only two avenues open for coordinated health care systems to service MA recipients through existing federal regulations—a primary care case management approach and an HMO contracting approach. "Given that we were not trying to become an insurance company, we elected to use the primary care case management approach, and through DPW applied for a waiver to the Health Care Financing Administration," he explains.

The Lancaster Task Force on Health Care is expecting approval from HCFA to move ahead with its plans by the end of this month. While waiting for the approval, Dr. Doe and the task force created two separate corporations to administer the "Lancaster Plan" and raised the appropriate start-up funds by soliciting contributions from local hospitals, physicians, insurance companies, and legislators. DPW also appropriated money through a legislative seed grant.

According to Dr. Doe, everything is in place and the two corporations—the Lancaster Community Health Plan and the Community Patient Information Network—will hopefully be in operation by late spring.

"The unique thing about this plan which comes to light as we're reaching our final goal is that we've managed to get four highly competitive hospitals and some very competitive groups of physicians to actually sit down and work together on a community project," Dr. Doe explains. "If nothing else ever comes of this project, I think the cooperation we've been able to achieve has been quite a substantial accomplishment. And, the physicians were the ones who drove it. This was a project that originally started with the county medical society, and they were able to build it into a broad-based, community partnership." ⬡

See next page for more details about the Lancaster Plan. →



Though Robert Doe, MD, is kept busy as a driving force behind the innovative Lancaster Plan, he still finds time to participate in other community projects. Above, Dr. Doe "signs on" in support of the governor's maternal and child health program.

SERVING PENNSYLVANIA'S MA POPULATION: HOW IT WORKS IN LANCASTER

The Lancaster Plan—one of three efforts in Pennsylvania to better serve the needs of Medical Assistance (MA) patients by improving access and controlling costs—is comprised of two separate corporations: the Lancaster Community Health Plan and the Community Patient Information Network. Together these corporations are expected to permit cost containment comparisons between fee-for-service coordinated care models and HMOs, and to generate health care data that will be important to the State Society and the government.

Lancaster Community Health Plan

The Lancaster Community Health Plan (LCHP) was incorporated as a nonprofit corporation in September 1993. Its function is to create a primary care case management system, which will link all participating MA recipients in the county to a primary care source of their choice.

The corporation is headed by a community-based, all-volunteer board comprised of providers, consumers, community agencies, legislators, insurers, the county assistance office, and an attorney. The board will be assisted by a salaried professional staff consisting of a chief administrator, a marketing representative, and a nurse.

Primary care providers who participate in LCHP are responsible for directing the total care of the MA patients to whom they are assigned. This includes making all non-emergency referrals to the hospitals or medical specialists when necessary, and providing access to care for their patients on a 24-hour-a-day basis. The providers will be reimbursed for services by the Pennsylvania Department of Public Welfare (DPW) at current MA rates, but will receive an additional monthly case management fee for each MA patient.

LCHP, however, offers unique features not found in other primary care case management systems. For example, the 24-hour coverage component will be supplemented by a cooperative effort between LCHP participating primary care providers (PCPs) and local emergency departments. The participating hospital emergency departments have agreed to perform a triage/gatekeeping role for interested PCPs for a fixed contractual rate. This cross-coverage system is designed to assist solo, small-group, and clinic providers in satisfying the requirement for 24-hour coverage.

Under the agreement, a registered nurse in the emergency department using a standardized software program will screen calls for PCPs that have been signed out to the emergency departments. If the patient needs to be seen by a physician, but it is not a true emergency, an emergency physician will see the patient and charge a fee equivalent to an office visit. For patients arriving in the emergency departments, similar triage advice will be given, and the patient will be offered an appointment with their PCP in lieu of an emergency visit if appropriate.

LCHP will recruit physicians and other health professionals to join the provider network, and will maintain PCP assignment files, perform quality assurance and utilization review on network providers beyond the scope of current DPW programs, respond to patient and provider complaints, and market the program to MA recipients.

Community Patient Information Network

The other unique part of the Lancaster Plan is the Community Patient Information Network (CPIN). This corporation owned by physicians, hospitals, and insurance companies in Lancaster County will create a computerized patient information network linking PCP physicians with county hospitals, medical specialists, and emergency departments.

Initially, the CPIN database will collect and maintain basic information on LCHP patients which should help reduce duplication of services, coordinate care, and allow tracking of individuals in need of care. The system will interface with DPW through the mainframe system or one of its satellite centers to receive daily updates on MA-eligible recipients in Lancaster County. In turn, DPW will be able to review PCP assignments. The CPIN system will eventually evolve to include electronic billing, a problem list for each patient, report writing for utilization profiling of providers, and the tracking of immunizations and well-child visits for individual patients.

Managed competition model

After creating the primary case management system for MA recipients, LCHP will begin negotiations with private insurance agencies to establish a private insurance option for MA recipients. Eventually, the plans will also be available to the uninsured, the underinsured, and small-group health insurance purchasers in Lancaster County.

LCHP will encourage multiple private insurers to create provider networks and offer these networks to LCHP participants. These insurers would then negotiate with DPW to receive a designated fee for each MA recipient enrolling in their insurance program. LCHP hopes to have at least three private insurers contract with DPW to ensure choice for the MA patient and competition among plans.

Once these networks are established, LCHP plans to offer its selection of the private insurance networks to others not on MA, which could include MA recipients who lose their eligibility, and other groups of uninsured and low-income workers. The insurance could be offered on a sliding scale if government funding was made available. Eventually, small employers and individual purchasers of insurance could elect to participate in the program.

Under the Lancaster Plan, LCHP will continue to exist even if 100 percent of its clients eventually select the private insurance option. LCHP's role would evolve to include:

- offering the cross coverage and CPIN network to private insurers;
- monitoring community standards by which the insurance networks could be judged;
- monitoring patient and provider complaints about the insurance networks;
- offering auxiliary services to the insurers; and
- monitoring quality assurance, utilization review, and community health data generated by CPIN.

In the end, LCHP could serve as a community watch dog monitoring the various insurance plans offered. It could assist in educating consumers in Lancaster County by comparing the insurance plans by price, provider participation, and quality outcomes.

YOCON®
YOHIMBINE HCl

Description: Yohimbine is a 3a-15a-20B-17a-hydroxy Yohimbine-16a-carboxylic acid methyl ester. The alkaloid is found in Rubaceae and related trees. Also in Rauwolfia Serpentina (L) Benth. Yohimbine is an indolalkylamine alkaloid with chemical similarity to reserpine. It is a crystalline powder, odorless. Each compressed tablet contains (1/12 gr.) 5.4 mg of Yohimbine Hydrochloride.

Action: Yohimbine blocks presynaptic alpha-2 adrenergic receptors. Its action on peripheral blood vessels resembles that of reserpine, though it is weaker and of short duration. Yohimbine's peripheral autonomic nervous system effect is to increase parasympathetic (cholinergic) and decrease sympathetic (adrenergic) activity. It is to be noted that in male sexual performance, erection is linked to cholinergic activity and to alpha-2 adrenergic blockade which may theoretically result in increased penile inflow, decreased penile outflow or both.

Yohimbine exerts a stimulating action on the mood and may increase anxiety. Such actions have not been adequately studied or related to dosage although they appear to require high doses of the drug. Yohimbine has a mild anti-diuretic action, probably via stimulation of hypothalmic centers and release of posterior pituitary hormone.

Reportedly, Yohimbine exerts no significant influence on cardiac stimulation and other effects mediated by B-adrenergic receptors, its effect on blood pressure, if any, would be to lower it; however no adequate studies are at hand to quantitate this effect in terms of Yohimbine dosage.

Indications: Yocon® is indicated as a sympathicolytic and mydriatric. It may have activity as an aphrodisiac.

Contraindications: Renal diseases, and patient's sensitive to the drug. In view of the limited and inadequate information at hand, no precise tabulation can be offered of additional contraindications.

Warning: Generally, this drug is not proposed for use in females and certainly must not be used during pregnancy. Neither is this drug proposed for use in pediatric, geriatric or cardio-renal patients with gastric or duodenal ulcer history. Nor should it be used in conjunction with mood-modifying drugs such as antidepressants, or in psychiatric patients in general.

Adverse Reactions: Yohimbine readily penetrates the (CNS) and produces a complex pattern of responses in lower doses than required to produce peripheral a-adrenergic blockade. These include, anti-diuresis, a general picture of central excitation including elevation of blood pressure and heart rate, increased motor activity, irritability and tremor. Sweating, nausea and vomiting are common after parenteral administration of the drug.[1,2] Also dizziness, headache, skin flushing reported when used orally.[1,3]

Dosage and Administration: Experimental dosage reported in treatment of erectile impotence.[1,3,4] 1 tablet (5.4 mg) 3 times a day, to adult males taken orally. Occasional side effects reported with this dosage are nausea, dizziness or nervousness. In the event of side effects dosage to be reduced to ½ tablet 3 times a day, followed by gradual increases to 1 tablet 3 times a day. Reported therapy not more than 10 weeks.[3]

How Supplied: Oral tablets of Yocon® 1/12 gr. 5.4 mg in bottles of 100's NDC 53159-001-01 and 1000's NDC 53159-001-10.

RECOGNIZING HANTAVIRUS PULMONARY SYNDROME

Your patient reports fever, myalgia, and variable respiratory symptoms, including cough and headache; influenza and other respiratory illness spring to mind in your differential diagnosis. However, a new entity has now been identified which must join the list: hantavirus pulmonary syndrome (HPS). If your patient then develops the abrupt onset of acute respiratory distress and no other pathogen is likely, HPS should be considered.

First recognized in the southwestern U.S. in May 1993, HPS has been confirmed in 42 persons reported to the Centers for Disease Control and Prevention (CDC) from 12 states as of October 21, 1993. As of yet, no cases have been identified east of the Mississippi. Ages have ranged from 12 to 69 years; 22 were male, and overall, 26 have died. Bilateral pulmonary infiltrates developed within two days of hospitalization, and the hospital course was characterized by fever, hypoxia, and hypotension.

Recovery in survivors has been without sequelae. Pathologically, the hallmark of the disease is the capillary-leak syndrome, with flooding of the alveoli by plasma. Hantavirus antigens can be detected by immunohistochemistry in formalin-fixed tissues and have been detected primarily in the endothelial cells in most organs, with marked accumulations in the lungs. Serology and polymerase chain reaction testing are also used for serum and tissue specimens, respectively.

Unlike previous hantavirus infections in other countries, which have been characterized by hemorrhagic features and renal involvement, hantavirus infection in the U.S. is characterized more typically by respiratory symptoms and only limited renal involvement. However, as of this writing, no defined set of symptoms and signs reliably distinguishes HPS at the time of presentation from other forms of noncardiogenic pulmonary edema or adult respiratory distress syndrome. The prognosis is poorest in patients with shock, and supportive measures are the basis for therapy. Testing for alternative diagnoses should be done.

To standardize the investigation of persons with possible HPS, the CDC and the Council of State and Territorial Epidemiologists (CSTE) have published clinical screening criteria to detect persons with an illness similar to those with confirmed hantavirus infection (see box, below). A packet containing the following is available:

- a copy of the October 29, 1993, *MMWR* article, "Update: Hantavirus Pulmonary Syndrome—United States, 1993";
- screening criteria;
- case report form, and
- laboratory specimen form.

To receive this packet or more information, contact your local state health center; your county/municipal health department; or the Division of Communicable Disease Epidemiology, Pennsylvania Department of Health, P.O. Box 90, Room 1014, Harrisburg, PA 17108, (717) 787-3350.

Maria Moll, MD
Pennsylvania Department of Health

Screening Criteria for HPS in Persons with Unexplained Respiratory Illness

Potential case-patients must have one of the following:

- a febrile illness (temperature ≥101°F [≥38.3°c]) occurring in a previously healthy person, characterized by unexplained adult respiratory distress syndrome, or bilateral interstitial pulmonary infiltrates developing within one week of hospitalization with respiratory compromise requiring supplemental oxygen; or
- an unexplained respiratory illness resulting in death, in conjunction with an autopsy examination demonstrating noncardiogenic pulmonary edema without an identifiable specific cause of death.

Potential case-patients are to be excluded if they have any of the following:

- a predisposing underlying medical condition (e.g., severe underlying pulmonary disease; solid tumors or hematologic malignancies; congenital or acquired immunodeficiency disorders; or medical conditions such as rheumatoid arthritis or organ transplant recipients, requiring immunosuppressive drug therapy such as steroids or cytotoxic chemotherapy); or
- an acute illness that provides a likely explanation for the respiratory illness (e.g., recent major trauma, burn, or surgery; recent seizures or history of aspiration; bacterial sepsis; or another respiratory disorder such as respiratory syncytial virus in young children, influenza, or legionella pneumonia).

Confirmed case-patients must have the following:

- at least one specimen (serum and/or tissue) available for laboratory testing for evidence of hantavirus infection, and
- in a patient with compatible clinical illness, either serology (presence of hantavirus-specific immunoglobulin M or rising titers of immunoglobulin G), polymerase chain reaction for hantavirus RNA, or immunohistochemistry for hantavirus antigen is positive.

STATEMENT ISSUED ON SCREENINGS FOR ASYMPTOMATIC PATIENTS

The Society's Commission on Licensure and Practice of the Health Care Professions has issued the following statement for Pennsylvania physicians:

According to information received from Berks County by the Society's Commission on Licensure and Practice of the Health Care Professions, a Florida-based company called Ultra-Life has been conducting carotid ultrasound and echocardiography scans on presumably asymptomatic members of local realty associations. The company's flyer claims that heart attacks and strokes can be prevented by its Test 1—Carotid Ultrasound Scan and Carotid Doppler Blood Flow Analysis, and Test 2—Heart Echocardiography and Heart M-Mode, at a total cost of $150. The flyer also claims the series would cost between $800-1,200 if done in a hospital. Test results are reportedly prepared by a "board certified (MD) specialist."

The commission believes that such routine testing does not represent acceptable medical practice and is a waste of scarce health care resources. However, after extensive investigation of the issue, it determined that an attempt at action against the

company would be futile. Nonetheless, the commission believes the medical profession should be aware of these activities.

Direct any questions to the Society's Department of Educational and Scientific Affairs at (800) 228-7823 or (717) 558-7750.

Robert J. Lilley, the Society's assistant director of educational and scientific affairs, contributed to the above article.

NICOTINE DEPENDENCY TEST OFFERED FOR SMOKERS

Physicians at the University of Pittsburgh Medical Center's (UPMC's) Comprehensive Lung Center have a simple written nicotine dependency test for smokers who have been thinking about quitting.

Heavy smokers often begin to experience physical withdrawal symptoms within two hours of giving up cigarettes. Symptoms may include restlessness, irritability, and frustration. "Nicotine replacement is aimed at minimizing these symptoms," according to Gregory Owens, MD. "This must be combined with stress reduction, behavioral modification, physical monitoring, and most importantly, follow-up, if a smoker is to successfully quit." He adds, "Smoking cessation must be geared toward treating the whole person, not just the smoking habit."

Scores of seven or more on the nicotine dependency test (at right) indicate that a smoker is highly dependent on nicotine and may need nicotine replacement to stop smoking. Scores of six or less indicate that a smoker has a low to moderate nicotine dependency and may not need nicotine replacement to quit smoking.

For more information, call UPMC's Comprehensive Lung Center at (412) 648-6161.

Nicotine Dependency Test*

This test measures physical nicotine dependence.
After answering all the questions, total your score, and refer to the article (at left).

Points	0	1	2	Score
1. How soon after you wake up do you smoke your first cigarette?	After 30 min.	Within 30 min.		
2. Do you find it difficult to refrain from smoking in places where it is forbidden, such as a library, theater, or doctor's office?	No	Yes		
3. Of all the cigarettes you smoke in a day, which is the most satisfying?	Any other than the first one in the morning	The first one in the morning		
4. How many cigarettes a day do you smoke?	1 to 15	16 to 25	26 or more	
5. Do you smoke more during the morning than during the rest of the day?	No	Yes		
6. Do you smoke even when you are so ill that you are in bed most of the day?	No	Yes		
7. Does the brand you smoke have a low, medium, or high nicotine content?	Low 0.4 mg or less	Medium 0.5 to 0.9 mg	High 1.0 mg or more	
8. How often do you inhale the smoke from your cigarette?	Never	Sometimes	Always	
How motivated are you?				
1. When you make up your mind to do something, do you follow through on it?	Most of the time	Some of the time	Usually not	
2. Do you find that getting help from family, friends, or professionals has helped you achieve desired goals?	Yes	No

AMA House Meeting Draws National Media Attention

The AMA House of Delegates Interim Meeting, held December 5-8, 1993, in New Orleans, received extensive media coverage nationwide when delegates voted to soften their support for an employer mandate as part of U.S. health system reform.

One newspaper reported that the AMA "dropped its support for the employer-mandate proposal," and another said the organization "move[d] against the employer mandate." But that wasn't the case, according to Delegation Chair Howard A. Richter, MD.

"The AMA House didn't eliminate the possibility of an employer mandate," Dr. Richter says. "All it did was make sure our options remain pluralistic...The whole point of reform is to assure universal coverage, [and] *if* there is an alternative to an employer mandate, we'd like it to be considered."

AMA Board Chair Lonnie R. Bristow, MD, further explained that the House action was "aimed at expanding the range of options for achieving universal coverage," and included "both employer and employee funding options."

The House action directs the AMA to "oppose any proposed legislation mandating that employers be totally responsible for employees' insurance premium costs." Dr. Richter says the media reports were a result of "misinterpretation" of the action.

Three state resolutions adopted

Amidst all the media attention, the AMA House considered a number of other resolutions, including 10 from the Pennsylvania Delegation. Of those, three resolves were adopted, directing the AMA to:

- ask the Health Care Financing Administration (HCFA) to require Medicare carriers to be responsible for repayment of any overpayments where physicians could not have been reasonably aware of an error;
- develop policies to recognize internists, pediatricians, family practitioners, and obstetricians/gynecologists as capable of providing both primary and consultative care; and
- adopt the policy that medical staff bylaws not allow proxy voting prior to a medical staff meeting.

Dr. Richter reports that several Pennsylvania resolutions were not adopted because they were not popular. Among those were three asking the AMA to: restudy dread disease insurance as part of health system reform; establish a committee on alternative health methods to gather, interpret, and disseminate accurate information on alternative medicine; and encourage *JAMA* to publish data from a Pennsylvania physician survey of cult activity, or conduct its own survey of AMA members.

About the outcomes of the unpopular resolutions, Dr. Richter says, "That happens. We shouldn't

Delegation Election Results

The Pennsylvania Delegation to the AMA conducted its biennial elections for the contested positions in the delegation during the interim meeting of the AMA House of Delegates in New Orleans in December. **Howard A. Richter, MD,** Delaware County, was re-elected chair; **Donald C. Brown, MD,** Westmoreland County, was newly elected vice chair; **Michael J. Prendergast, MD,** York County, was re-elected secretary; **Victor F. Greco, MD,** Luzerne County, was re-elected delegate-at-large; and **Richard T. Bell, MD,** Berks County, was newly elected delegate-at-large.

SPRING ASSEMBLY TO FOCUS SHARPLY ON HEALTH REFORM

Determining a focus for the Society's annual spring educational gathering came quickly to the committee, according to Chair John W. Mills, MD. He says it was clear, even early last year when the committee first began discussions, that joining specialists, other health practitioners, and all the various providers together to preserve essential aspects of medicine would be vital in 1994.

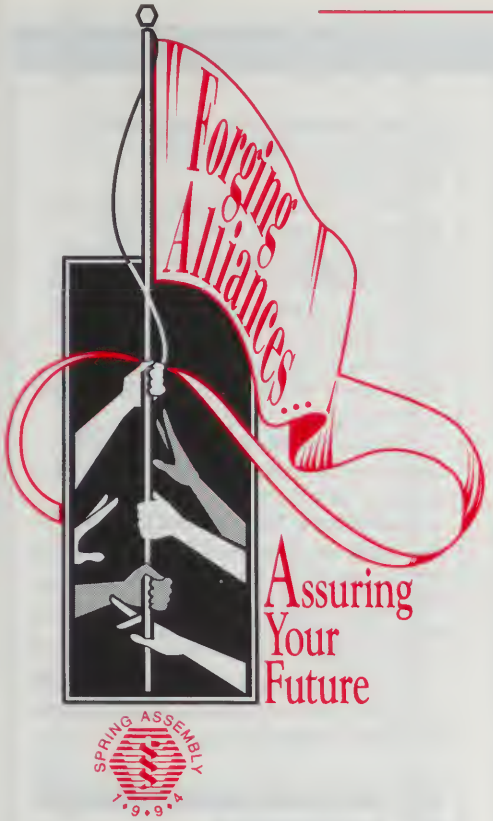
This year's theme, "Forging Alliances...Assuring Your Future," is the natural outgrowth of this realization. The committee hopes to convey the enormous potential for alliances among medicine's factions, and has designed a program to help build members' political and negotiating skills. The Spring Assembly (formerly Leadership Conference) will be held noon to noon, April 19-20, 1994, at the Harrisburg Hilton and Towers.

Richard F. Corlin, MD, a California physician and member of the AMA Board of Trustees, will open the first day of the meeting with a keynote address on the future of medicine. Other nationally known speakers—including a high-ranking Clinton administration official—will discuss such pertinent issues as the future of health system reform and how to deal with it, and alliances with other health care professionals.

Day two will begin with the President's Address by State Society President Martin A. Murcek, MD, followed by presentation of the Society's first-ever Physician Volunteer Award. The award is the result of a 1991 House action directing the Society "to honor on a yearly basis an outstanding Society member distinguished for volunteer community service." PENNSYLVANIA MEDICINE will profile this year's recipient in conjunction with follow-up coverage of Spring Assembly.

Also on day two, six workshops will be offered on topics including: personal computers, organizational options for medical staff in the changing health care environment, personal financial planning for physicians, managed care contracts, effective approaches to legislators and the public, and bioethics.

Registration forms for the assembly were published in this month's *Executive Report.* For additional information, see opposite page. Also, final details about Spring Assembly will be featured in the *Newsfronts* section of PENNSYLVANIA MEDICINE next month.



Pennsylvania Medical Society

Spring Assembly April 19-20, 1994

Harrisburg Hilton and Towers

Keynote Address:

"What is the Future?"—Richard F. Corlin, MD, immediate past president of the California Medical Association and member of the AMA Board of Trustees. Dr. Corlin was a featured speaker at the Forum on Health System Reform that opened the 1992 annual meeting of the Society's House of Delegates in Philadelphia.

Plenary Speakers:

"What is the Future of Health System Reform?"—A high-ranking Clinton Administration official —promised by the Democratic National Committee— will address the future as seen by the White House.

"Dealing with the Future."—Jennifer James, PhD, cultural anthropologist, lecturer, and columnist for *The Seattle Times,* will discuss the ways in which we confront and respond to change.

"Alliances with Health Care Professionals"—Thomas M. Reardon, Esq., of Mintz, Levin in Boston, returns after scoring one of the most popular presentations of last year's conference. He will bring to the assembly his extensive experience in forming physician groups.

Six Workshops—Tools for Building Alliances:

"Computers Made Easy"—A discussion of the basics of personal computers and the growing role PCs are playing in the health care system, presented by Edward H. Dench Jr., MD, member of the Society's Board of Trustees, and Dr. Dench the Society's representative on the state's HealthNet Task Force to develop a pilot telemedicine program for Pennsylvania.

"PHO . . . Friend or Foe?"—Developed in cooperation with the Hospital Medical Staff Section Governing Council and presented by Jill Willen of KPMG Peat Marwick, this workshop will explore the benefits of developing physician alliances in the turbulent times of system reform.

"Financial Planning in the Changing Environment"—Presented by AMA Investment Advisors, Inc., and developed with the Young Physician Section Governing Council,. this workshop will include repayment of educational debts, buying a house, buying insurance, establishing an investment plan, and saving for retirement.

"Contracting with Managed Care Organizations"—Presented by popular past speaker, Alice G. Gosfield, Esq., a health care law specialist from Philadelphia, this presentation is a must for physicians confronted with tough choices in the business side of medicine.

"Difficult Decisions for Patients and Families"—A discussion of the ethical considerations presented by health system reform, led by Stuart Youngner, MD, associate professor of medicine, Department of Psychiatry and Biomedical Ethics, Case Western Reserve University School of Medicine, Cleveland, Ohio.

"Winning Approaches to Your Legislator and the Public"—Presented by Robert Lamb of The Educational and Scientific Trust and Amy Dugan, media relations director for the Society. Be effective in your contacts with local governmental officials and the public on issues important to your practice.

worry." He adds, "The delegation performed admirably in all of its deliberations, and we are functioning extremely well at this time."

TWO SEMINARS SCHEDULED PRIOR TO SPRING ASSEMBLY

Among several events scheduled in conjunction with the Society's 1994 Spring Assembly are two semiars addressing political and Hospital Medical Staff Section (HMSS) issues.

Practicing politics

At "Practicing Politics," a full-day seminar scheduled April 18 at the Harrisburg Hilton, nationally recognized speaker Michael Dunn will present "political skills you need to have an impact on the 1994 election."

Sponsored by the American Medical Political Action Committee (AMPAC) and the Pennsylvania Medical Political Action Committee (PAMPAC), the seminar will include a legislative issues briefing and personal visits with state legislators at the Capitol.

The seminar is open to all State Society and Alliance members. A small fee is being charged to cover the cost of lunch. For more information or to register, call the PAMPAC office at (717) 558-7822 or the State Society at (800) 228-7823.

Improving clinical decision making

How do physicians and hospital medical staffs remain competitive in an era of downsizing, managed care, and prospective reimbursement? How can they demonstrate quality results and still keep their practices and hospital lean, yet retain the rewards of improved efficiency? Those are the questions the new, half-day seminar, "Improving Cost-Effective Clinical Decision Making," will answer the evening before the Society's Spring Assembly.

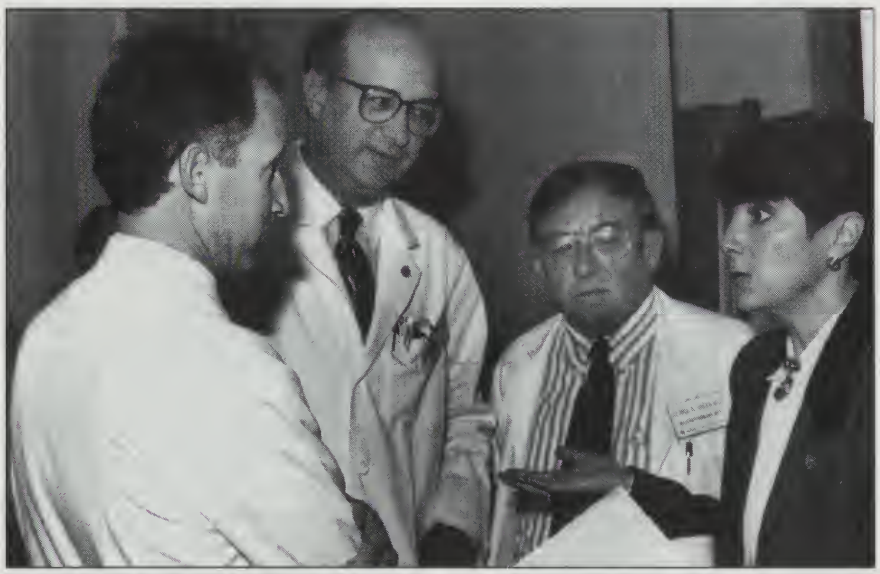
Hospital medical staff leaders—including physicians directing quality assurance, utilization review, risk management, and cost containment—are invited to attend this train-the-trainer experience in which participants will receive materials and skills to help them train their own medical staffs in the most efficient use of hospital resources. Speakers will include:

- Toni M. Casale, DO, director of outcomes and assessment, Philadelphia College of Osteopathic Medicine, Philadelphia;
- Lee H. McCormick, MD, chairman, of the AMA-HMSS;
- David B. Nash, MD, MBA, director of health policy and clinical outcomes, Jefferson Medical College, Philadelphia; and
- David J. Shulkin, MD, director of clinical outcomes assessment and quality management, University of Pennsylvania Medical Center, Philadelphia.

The seminar, cosponsored by the Society's Hospital Medical Staff Section (HMSS) and The Scientific and Educational Trust's Institute for Physician Leadership, begins at 4:00 p.m. on April 18 at the Harrisburg Hilton and concludes at 8:00 p.m. Four hours of Category 1 CME credit have been requested.

The cost of the seminar, which includes the evening meal, is $130 for Society members and $165 for nonmembers. Medical staffs and hospitals are eligible for group discounts when more than one physician attends from the same hospital or health care organization.

For further information, call (800) 228-7823, extension 461. Registration deadline is March 31.



More than 40 physicians attended the November meeting of the Montgomery County Medical Society (MCMS), held at Abington Memorial Hospital and featuring U.S. Representative Marjorie Margolies-Mezvinsky (right). According to MCMS Executive Director U. Berkley Ellis, EdD, "The physicians and the congresswoman had a profitable, positive dialogue." Pictured with Representative Margolies-Mezvinsky are (from left): Arthur M. Frankel, MD, president of Abington's medical staff; David J. Eskin, MD, chief of staff; and George R. Green, MD, MCMS president.

COUNTY NEWS

DR. MCCORMICK INAUGURATED 129TH ACMS PRESIDENT

Lee H. McCormick, MD, was inaugurated as the 129th president of the Allegheny County Medical Society (ACMS) at the annual installation of officers on January 8, 1994. He succeeds George J. Gerneth, MD.

Dr. McCormick is a family practitioner affiliated with Jefferson Hospital and Braddock Medical Center. Certified by the American Society of Addiction Medicine, he also serves as medical director of drug and alcohol recovery services at both institutions. A graduate of the University of Pittsburgh School of Medicine, he served his internship at South Side Hospital and residency at Montefiore Hospital.

Dr. McCormick has been an active member of organized medicine since 1959. Currently, he is Hospital Medical Staff Section (HMSS) representative on the State Society's board, as well as a member of the Physicians' Health Programs Advisory Committee and the Pennsylvania Delegation to the AMA. He also is a board member of the Foundation for a Drug Free Pennsylvania.

Other ACMS officers installed were: Nancy S. Nieland, MD, a dermatologist affiliated with

THE SECOND ANNUAL ONCOLOGY SEMINAR: ADVANCES IN CURRENT THERAPY

Thursday, March 24, 1994
Shadyside Hospital, Pittsburgh, PA

Dennis J. Meisner, M.D.
Course Director

PRESENTERS AND TOPICS INCLUDE:

- **Martin D. Abeloff, M.D.**, Johns Hopkins Oncology Center, Baltimore, MD
  Treatment of Early Stage Breast Cancer
- **Ms. Helene Brown**, Johnsson Comprehensive Cancer Center, Los Angeles, CA and **B.J. Kennedy, M.D.**, University of Minnesota Hospital & Clinic, Minneapolis, MN
  Alternative Cancer Treatments: Cancer Quackery vs. Hopeful Beginnings
- **Lawrence H. Einhorn, M.D.**, Indiana University Medical Center, Indianapolis, IN
  Treatment Update in Small Cell Lung Carcinoma
  Advances in Testicular Cancer Therapy
- **Alan Saven, M.D.**, Scripps Clinic and Research Foundation, La Jolla, CA
  Development of 2-CDA and Its Use in Low-Grade Lymphomas
- **Charles Schiffer, M.D.**, University of Maryland Cancer Center, Baltimore, MD
  Advances in Acute Myeloid Leukemia

Shadyside Hospital is accredited by the Accreditation Council for Continuing Medical Education to sponsor continuing medical education for physicians.

An application has been submitted to the Oncology Nursing Society for 5.5 contact hours of continuing education for R.N.s attending the Shadyside Hospital Second Annual Oncology Seminar: Advances in Current Therapy. The Oncology Nursing Society is accredited as an approver of continuing education by the American Nurses Credentialing Center's Commission on Accreditation.

Shadyside Hospital designates this continuing medical educaiton activity for 5.5 credit hours in Category I of the Physician's Recognition Award of the American Medical Association.

For registration information, please contact the Department of Continuing Medical Education at (412) 623-2393, or Fax 623-3010.

Presbyterian-University, Children's, Montefiore, St. Margaret, and St. Francis hospitals, as president elect; Richard N. Harris, MD, an internal medicine specialist affiliated with Presbyterian-University, Eye and Ear Institute Pavilion, and Shadyside hospitals, and St. Francis Medical Center, as vice president; and Alan A. Axelson, MD, a psychiatrist with an emphasis on children and adolescents, as secretary. John S. Oehrle, MD, a pathologist, will serve a sixth term as ACMS treasurer.

MERCER COUNTY PHYSICIANS DISCUSS REFORM

Nino Camardese, MD, immediate past president of the Association of American Physicians and Surgeons, shared his philosophical views on health system reform at the November meeting of the Mercer County Medical Society.

Though Dr. Camardese did not argue specific proposals of President Clinton's health plan, he did say that people only have to look at history to discover that the plan is one that should not have to be put into practice. He said the plan is a form of government oppression which takes choice away from physicians and their patients and gives it to government.

Instead of the proposed National Health Care Advisory Board and its state alliances, Dr. Camardese suggested a medical savings account program—patients would pay for their own minor medical expenses, and regular deposits to a special account would be used to pay for major illnesses and injuries. He said, "If we empower the individual with responsibility, then we literally allow the individual to maintain dignity and pride."

Physicians interviewed by *The (Youngstown) Vindicator* said the following about President Clinton's proposed health system reform:

- It is at the very least a socialistic agenda.
- It will thwart competition and result in substandard care.
- It is overbearing.
- The country's Veterans Administration hospitals are examples of what would happen if the Clinton plan was enacted.

Approximately 75 physicians and spouses attended the monthly meeting, held at Grove City Country Club.

ORTHOPEDIC SOCIETY PLANS SPRING MEETING

The Pennsylvania Orthopedic Society will hold its Spring 1994 meeting, "Total Knee Arthoplasty: Advances, Complications, and Outcomes," April 20-23 at the Boca Raton Resort and Club, Boca Raton, Florida. The meeting offers 12.5 hours of Category I CME credit.

For more details about the meeting, or to register, call (800) 228-7823 or (717) 558-7750, extension 447.

PHILADELPHIA INSTITUTIONS LINK TO PRESERVE STRENGTHS

Pennsylvania Hospital and Thomas Jefferson University, both in Philadelphia, have agreed to formally link their academic, clinical, and administrative programs to preserve and build on the strengths of both institutions.

By developing formal relationships, the hospital and university hope to strengthen the quality of undergraduate and graduate medical education programs, enhance faculty development, coordinate continuing medical education, enhance cooperation in clinical programs, and expand the network of services offered to the communities they serve. Ultimately, they will share common clinical leadership. The governing bodies of both institutions have approved "guiding principles" for the agreement.

As part of their long-term evolutionary commitment, Jefferson and Pennsylvania Hospital will build on existing agreements in orthopedics and otolaryngology-head and neck surgery, where the chairmen of these departments serve in key leadership roles at both institutions. This commitment will expand to other departments in the future.

HCQII: Sources of Cooperative Projects

Donald E. Harrop, MD

This is a continuation of a review of some of the various components of the Keystone Peer Review Organization's (KePRO's) Health Care Quality Improvement Initiative (HCQII). Last month's article dealt mainly with focused medical review and briefly referred to cooperative projects which are really the basis of the HCQII. Future articles will address the two kinds of cooperative projects, local and national. Here we will look at the major sources of cooperative projects and more of the HCQII process.

To begin, I should state that cooperative projects are appropriately named—that is, they must rely upon the coordinated involvement of a number of participants. Hospital medical staffs, administration, and the individual members of each; study groups, and committee members; as well as Keystone Peer Review Organization (KePRO) staff, must all cooperate and be committed to a project in order to assure its success.

Identification of subjects for cooperative projects can come from a variety of sources. These may include specialty societies whose members may recognize variations from physician to physician in the way certain diagnoses are managed, procedures are performed, or in outcomes of care. Subjects may also result from published literature review or data analysis, or they may be identified by our Steering Committee, clinical coordinators or staff epidemiologist, or even members of the public such as Medicare beneficiaries.

Of course, the most knowledgeable and reliable sources of projects are the specialty societies, individual physicians, and providers. Because of this, a little more is expected of members of these groups when one of them suggests a project. We would expect that a clinical hypothesis be established, backed by a literature search prior to assignment to our pattern analysis staff. This expedites the project development cycle and allows our clinical coordinators and pattern analysis staff to more easily develop proposals for the Project Development Committee. Individual physicians who wish to suggest a cooperative project subject, please see the box below.

Data are another excellent source of potential projects. The quarterly MEDPRO reports, Medicare hospital claims data, KePRO review data, Health Care Financing Administration (HCFA) national data, and PRO data from other states are used by our pattern analysis staff to conduct data analysis. Staff attempts to identify patterns from the Pennsylvania data which may form the basis for cooperative projects.

Although Medicare beneficiaries have limited knowledge of health care delivery or potential clinical issues, they are another source of projects. They bring to the process the consumer's perspective on what constitutes quality of care and often identify important matters which providers may overlook at a particular level.

There are a variety of ways in which we receive beneficiary input, including the beneficiary hotline and complaint letters. Subjects which have potential as cooperative projects are referred to the Health Care Improvement Department to determine if a clinical hypothesis can be developed, and if so, the pattern analysis staff examines the data to see if any variations exist.

As cooperative projects are completed, outcomes are measured to determine if there have been improvements in patient care.

Within the next few months, we hope to complete our first few projects. The most interesting part of this whole process will be seeing whether or not we have been able to have a positive effect on medical practice.

Physicians who wish to suggest a cooperative project subject should call the KePRO Communications Department at (717) 564-8288 and request an "Improvement Project Suggestion" form.

Dr. Harrop is president of the Keystone Peer Review Organization.

Is Your Voice Being Heard?

When You Speak, We Listen.

We hear your concerns about healthcare reform. That's why Postgraduate Medicine is devoting several upcoming issues exclusively to healthcare reform. We're calling these special issues **"Healthcare '94."**

Look for the February 15th, May 15th, September 15th and November 15th issues.

Our mission is to keep you abreast of the changes that will affect primary care physicians.

"Healthcare '94." The place to find answers to your questions about healthcare reform.

MEDICARE PAYMENT POLICY CHANGES OVERVIEWED

This is a summary of various Medicare payment policy changes that became effective for service dates on or after January 1, 1994. Physicians are advised to take note of these changes since they will affect billing and subsequent reimbursement from Medicare.

Anesthesia services furnished by non-anesthesiologists

Under the fee schedule, separate payment is not allowed for an anesthesia service that a surgeon may perform in addition to and concurrent with a surgical procedure. In the past, however, the Medicare carrier—Pennsylvania Blue Shield—has allowed a psychiatrist who furnishes electroconvulsive therapy and the associated anesthesia service to be paid separately for the anesthesia service.

Separate payment will no longer be allowed. Relative value units (RVUs) for CPT Code 90870 (electroconvulsive therapy) have been increased to include payment for the anesthesia.

Site-of-service payment differential

In the past, payment for services routinely furnished in physicians' offices was reduced when such services were furnished in hospital outpatient settings (places of service 22, 23, and 62). Application of this site-of-service differential is being extended to include hospital inpatient settings. Also, the differential will now be applied to office and confirmatory consultations. Practice expense RVUs for these consultations have been reviewed so that they are based on office charge data only.

Payment for supplies other than drugs

Urological Procedures (Cystoscopies): In the past, Blue Shield allowed separate payment for a surgical tray under HCPCS Code A4550 for certain procedures when performed in a physician's office. Twenty-one cystoscopy codes have been added to the list of services for which the carrier allows a separate payment for supplies.

Catheters: Separate payment will now be made for catheters used by physicians in the treatment of temporary obstructions when performed in a physician's office. HCPCS Code G0002 (office procedure, insertion of temporary indwelling catheter, Foley type [separate procedure]) has been created for this purpose. This code will only be paid for when performed in the physician's office. Blue Shield will not pay for Code G0002 when it is performed on the same day as or during the post-operative period of a major surgical procedure.

Unna Boots: The Bureau of Policy Development has added 0.5 RVUs to the practice expense of CPT Code 29580 (strapping; unna boot) to account for additional supply cost incurred when this procedure is performed in an office setting. The additional RVUs have been subtracted in the calculation of the payment amount for the site-of-service differential. This reduction is already reflected in the Medicare Fee Schedule Data Base (MFSDB). Since this procedure is virtually always performed in the office, the carrier is not installing additional edits.

Lacrimal Punctum Plugs: Blue Shield will allow separate payment for silicone punctal plugs when the new HCPCS Code A4263 (permanent, long term, non-dissolvable lacrimal duct implant, each) is reported with CPT Code 68761 and an office place of service is used.

Implantable Vascular Access Devices: HCPCS Code A4300 (implantable vascular access device) is listed with a status code of "X" (excluded from the physician fee schedule) on the MFSDB. Since these devices are supplies incident to a physician's service (CPT Code 36533—insertion of implantable venous access port, with or without subcutaneous reservoir), the "X" status code is incorrect. The status code has been changed to an "A," and separate payment will be allowed when Code A4300 is billed with Code 36533.

E/M services

Prolonged Evaluation and Management (E/M) Services: Medicare will pay for the prolonged services CPT Codes 99354 (prolonged physician service in the office or other outpatient setting, first hour); 99355 (prolonged physician service in the office or other outpatient setting, each additional 30 minutes); 99356 (prolonged physician service in the inpatient setting, first hour); and 99357 (prolonged physician service in the inpatient setting, each additional 30 minutes) when the following criteria are met:

- The physician has furnished and billed one of the following CPT codes for the patient on the same day: *in the case of 99354:* 99201 through 99205, 99212 through 99215, 99241 through 99245; *in the case of 99355:* 99354 **plus** one of the codes required for 99354 to be used; *in the case of 99356:* 99221 through 99223, 99231 through 99233, 99251 through 99255, 99261 through 99263, 99301 through 99303, 99311 through 99313; and *in the case of 99357:* 99356 **plus** one of the codes required for 99356 to be used.
- The time counted toward payment for prolonged E/M services includes only direct face-to-face contact between the *physician* and the patient (whether or not the service was continuous).
- The medical record documents the content of the E/M service code billed, and the duration and content of prolonged services that the physician personally furnished after the typical time of the E/M service has been exceeded by at least 30 minutes. Documentation need not be submitted to the carrier for processing purposes.

Ventilator Management on the Same Day as an E/M Service: Ventilation management codes (CPT Codes 94656, 94657, 94660, and 94662) will continue to be payable services under the physician fee schedule. However, payment will no longer be made for ventilation management when an E/M code is billed on the same day; ventilation management is considered bundled into the E/M codes. There will no longer be a global period associated with ventilation management, so CPT modifier -25 will no longer be accepted to justify payment for an E/M service provided on the same day as ventilation management.

Clinical interpretation services

Medicare has recognized 15 clinical laboratory tests for which a clinical laboratory interpretation fee could be recognized if the test is furnished by a laboratory physician. Four codes (84181, 84182, 88371, and 88372) have been added to the list for payment.

Call the Society's Department of Medical Economics at (800) 228-7823 or (717) 558-7750.

ou're on solid ground with the Dodson Plan.

More than 75 years ago, Bruce Dodson, Sr. pioneered the concept of the dividend plan for workers' compensation insurance. Dodson Group has been helping businesses like yours save on premium costs ever since.

The Dodson Plan gives you the opportunity to earn a dividend each year, depending on the claim experience of all insured members. We carefully select those who participate, creating the greatest potential for you to save.

Pennsylvania Medical Society endorsed the Dodson Plan in 1973. Since then, participating members have earned a total of **$2,309,240** in dividends. Share in the savings!

You're on solid ground with Dodson.

Workers' Compensation Laws Undergo Significant Change

The Health Care Group

More than six months have passed since Act 44, the Pennsylvania Workers' Compensation Act, was signed into law. The act imposes additional requirements and prohibitions to the state's already complicated workers' compensation system—changes such as revisions to the reimbursement rates and fee schedule review process, self-referral prohibitions, and alterations to the utilization review and peer review process. Since these new tenets continue to affect physicians as both health care providers and employers, they are briefly reviewed here for members' reference.

Reimbursement schedule, fee review

The act generally caps medical fees at 113 percent of the applicable Medicare reimbursement rate or of the diagnostic-related group (DRG) payment, plus pass-through costs. If Medicare employs any other reimbursement mechanism, the fee is capped at 113 percent of the reimbursement determined by the Medicare carrier or intermediary. This cap on fees applies to all health care providers treating injured employees, regardless of whether the provider participates in the Medicare system. If Medicare has not established a fee for a particular treatment or service, then payment may not exceed 80 percent of the usual and customary charge.

All bills for medical services must be submitted on a HCFA 1500 claim form. The act also requires the Department of Labor and Industry to prescribe a standard form for medical reports to be filed by the provider with the patient's employer.

The cap on medical fees applies to treatment and services rendered to new and existing patients on or after August 31, 1993. After January 1, 1995, medical fee reimbursement rates will be updated annually based upon the percentage change in the statewide average weekly wage, with such updates being cumulative.

Utilization review

Act 44 implements a comprehensive utilization review and peer review procedure, and establishes a new type of utilization review body called a utilization review organization (URO). A URO is made up of an impartial physician, surgeon, or other health care provider or panel of providers. The purpose of a URO is to review the reasonableness and necessity of treatment provided to employees. The act does not address whether the review must be by a member of the same specialty or profession as that provider.

Act 44 provides that peer review may be prospective, concurrent, or retrospective. The wording of the act appears to limit the URO's authority to reviewing medical reasonableness and the necessity of the treatment provided. However, no precise definition of "medical necessity" can be found in the act. Utilization review may be requested by an employee, employer, or insurer.

The act also establishes a detailed process for the peer review procedure. Peer review may be initiated by the workers' compensation judge or any party to the litigation. Peer review organizations (PROs) are randomly assigned to each case from an approved list. The act establishes a comprehensive time frame during which records are requested, hearings held, and determinations made.

The act also repeals a provision of the previous law which required an employer to file a petition with the workers' compensation judge before the employer could cease paying benefits. Under the act, the employer may stop paying benefits as long as the treatment has been challenged to a PRO on a timely basis.

Designated workers' comp physicians

If an employer posts a list of designated providers, a worker who claims injury must be treated by a designated physician or other health care provider for a period of 30 days from the date of the first visit. Under the previous law, there was a 14-day time limitation. The act expands the scope of an employer's list to include at least six physicians, health care providers, or coordinated care organizations (CCOs). Two of the six providers may be CCOs, but no fewer than three must be physicians.

The method for accreditation as a CCO is also spelled out in the act. CCOs must include a distribution of health care providers across various specialties and must have the ability to make referrals to treat injuries that would not normally be covered by primary care services, but are otherwise covered by the act. Such referrals would include dental, chiropractic, and optometry services.

Patient billing prohibited

A provider may not hold an employee liable for health care costs provided in connection with a work-related injury covered by the act unless the employee has failed to comply with his or her obligations under the act.

Reporting requirements

Health care providers treating injured employees must file periodic reports with the employer. Those reports include history, diagnosis, treatment, prognosis, and physical findings. An employer is not required to pay for treatment until the report has been filed.

Member Resource

The Pennsylvania Medical Society—working with the state Department of Health and the state Department of Labor and Industry—has compiled answers to some of the most often asked questions about the Pennsylvania Workers' Compensation Act of 1993. For a copy of the questions and answers, call the Society's Department of Regulatory Affairs and Specialty Legislation at (800) 228-7823 or (717) 558-7750.

An employer must pay the provider for treatment within 30 days of receipt of bills and records, unless the employer disputes the reasonableness and/or necessity of treatment provided. If a provider disputes the amounts or timeliness of the payment from the insurance company, the provider may file an application for review with the Department of Labor and Industry, except if the employer is challenging the reasonableness or necessity of the treatment to a URO.

Anti-referral prohibition

Act 44 contains two prohibitions on referrals by providers. First, providers are prohibited from referring a patient for laboratory, chiropractic, physical therapy, rehabilitation, radiation/oncology, psychometric, home infusion therapy, or diagnostic imaging services or goods if the referring provider has a financial interest with the person, or in the entity, that receives the referrals. The act also contains a broad fraudulent billing and anti-remuneration referral provision.

The department has indicated that the Medicare safe harbor provisions will be recognized as exceptions to the anti-referral prohibitions found in the act. Additionally, exceptions to the Ethics in Patient Referral Act, known as Stark I and II, will also be recognized. The department will also consider implementing other exceptions to the anti-referral prohibitions.

While this review outlines the act's provisions that generally affect health care providers, the act also implements other provisions which may affect physicians in their capacity as employers. Accordingly, physicians should consult with the State Society, their carriers, or counsel if additional guidance is needed to assure full compliance with Pennsylvania's updated workers' compensation reforms.

The contributing author, Nancy W. Miller, JD, is an attorney/consultant with The Health Care Group, a medical practice management consulting firm based in Plymouth Meeting.

Society Continues Efforts to Resolve Primary Care Shortage

The State Society in 1993 developed a 93-page draft of "Recommendations to Resolve the Primary Care Physician Shortage." The report—summarized in the December 1993 issue of PENNSYLVANIA MEDICINE—discusses the shortage, its causes, and current efforts to resolve the shortage, and recommends several long-term solutions.

According to the report, long-term solutions to the primary care physician shortage require simultaneous actions on many fronts, including by medical schools, residency programs, and state and federal governments. The Society also maintains that the Federation of Medicine must play a participatory role and not just advise what others should do. Following is an overview and update of existing Society programs to address the primary care physician shortage.

Lancaster Community Health Plan

This coordinated care pilot project—developed by the Lancaster County and City Medical Society and supported by the State Society—would provide all Medicaid recipients with access to a primary care "medical home" that would also serve as a gatekeeper for other services. The project also includes support services, such as a computerized medical tracking system for immunizations and an after-hours coverage service. For a more detailed look at the project and one of its key players, see pages 36-38.

Health Care Financing Administration approval of the Lancaster Plan is expected on or about February 15, 1994. At press time, a few details of the project remained unresolved by the Department of Public Welfare.

The Society will continue its close collaboration and support of the project, and provide technical assistance to county societies interested in implementing similar pilot projects.

Physician masterfile

The Society's physician masterfile is a comprehensive listing of all physicians licensed, practicing, and/or residing in the commonwealth. The Society shares this information with the Department of Health and organizations working to resolve access problems in Pennsylvania by identifying underserved areas.

One such organization is a task force made up of representatives of the Society, the Hospital Association of Pennsylvania, the Pennsylvania Office of Rural Health, and the Pennsylvania Forum for Primary Health Care. The task force is working to develop a resource guide for regions to use in seeking designation as a Health Professional Shortage Area (HPSA) or a medically underserved area (MUA). Since the number of primary care physicians in a region is important to the determination, the Society is offering the masterfile to track those numbers. Depending on the nature of any particular request, a nominal fee may be required to cover the Society's costs.

Also, the Society has offered the resource to the Robert Wood Johnson Foundation (RWJF) General Physician Initiative at Penn State's College of Medicine, Hershey. Under the initiative, the college is challenged to increase the supply of generalist physicians; the file will be used to track Penn State medical graduates.

HPSA designation process education

As mentioned above, the Society is involved in a task force to develop a guide to assist organizations in applying for HPSA status. The Society believes the guide could be a valuable tool for county societies, to assist them in becoming more active and productive in the identification of underserved areas.

Community/practice opportunity assessment

The Society has developed a handbook which includes checklists and questionnaires that assist physicians in evaluating possible practice location sites using criteria such as population and demographic statistics, educational opportunities for family members, and the availability of cultural stimulation. While the primary focus of the handbook is to aid physicians, it can also be helpful to communities recruiting a physician.

RWJF Practice Sights Initiative Steering Committee

Representatives of the State Society continue to participate in this steering committee formed to assist the Pennsylvania Department of Health in preparing its proposal for a RWJF implementation grant on primary care. The Society is actively helping to finalize the grant proposal and also participating in committee task forces on primary care practitioner team building, community/provider technical assistance, and recruitment and retention of primary care providers.

Future initiatives

As reported in December, the Society is also planning a number of future initiatives as part of its effort to resolve the primary care physician shortage. The Society is planning to:

- encourage and support legislative and regulatory initiatives important to the resolution of Pennsylvania's primary care physician shortage;
- support initiatives for greater availability and utilization of physician extenders, provided adequate safeguards are in place to assure quality through collaboration and supervision by physicians;
- study how it can assist primary care physicians in rural areas to minimize their isolation and the "hassle factor" by forming groups or other practice links with other physicians;
- study the merits of targeting students committed to pursuing careers in primary care for medical education loans provided by its Educational and Scientific Trust; and
- explore the merits of a project to update Pennsylvania's urban shortage areas.

U.S. PHYSICIANS CONTINUE PUSH FOR REFORM

U.S. physicians remain strongly committed to health system reform, while both supporting and rejecting

various aspects of the Clinton administration's plan to revamp the system, according to a poll released by the AMA in December.

In the poll, conducted in October and November 1993, 83 percent of physicians supported the Clinton plan on features that would extend coverage and access to Americans. A majority of physicians thought the plan would be either "very effective (29 percent) or "somewhat effective" (46 percent) in ensuring care for all Americans.

Among the features supported by physicians:

- no denial or loss of coverage for any reason (91 percent);
- a comprehensive benefit package (78 percent);
- access to a wide choice of health plans, and with extra fees, to a wider choice of physicians and hospitals (70 percent);
- an employer mandate (70 percent);
- limits on the growth of health insurance premiums (55 percent); and
- liability reform requiring the use of alternative forms of dispute resolution (87 percent).

On other aspects of the administration's plan, physicians were more critical. Principal areas of opposition were:

- cuts in Medicare and Medicaid (81 percent);
- creation of a National Health Board (56 percent);
- allocation of resident training positions by the government (62 percent);
- a system of mandatory alliances (55 percent); and
- a national health care budget that limits the growth of expenditures (52 percent).

Fifty-two percent of responding physicians said patients would fare "worse" under the plan, while only 19 percent thought their patients would benefit, 24 percent expected patients to fare "the same," and two percent expressed no opinion. The results indicate that the better physicians feel patients will fare under the plan and the more they feel the plan would be effective, the more positive physicians are toward the plan.

Additional analysis revealed skepticism about the likely success of the plan in controlling health care costs, with four percent of respondents predicting "very effective" in maintaining quality, while 40 percent feared the plan would be "very ineffective" in upholding quality standards. Seventy-one percent of physicians interviewed thought the administration plan did not go far enough on liability reform because it did not include a cap on non-economic damages.

Asked for an overall reaction to the plan, 44 percent of physicians said their reaction was negative, 32 percent were "neutral," and 22 percent said their reaction was positive.

TEN "DEVILISH DETAILS" LISTED FOR CONGRESS

Congress needs "to work the devil out" of 10 AMA priorities to ensure meaningful health system reform, AMA Executive Vice President James S. Todd, MD, told delegates at the House's Interim Meeting in New Orleans in December.

"I hope they're listening up there in Washington, on both ends of Pennsylvania Avenue," Dr. Todd said. "I want them to get out a pencil and paper, because I have a list of 10 details they had better work the devil out before any kind of reform is going to work."

The 10 "devilish details" Dr. Todd listed for Congress include:

1. Avoid new bureaucracies that intrude on the traditional patient-physician relationship.
2. Give negotiating power to physicians.
3. Eliminate spending limits that limit care.
4. Keep medical decision making in physicians' hands, not in the hands of giant insurance companies.
5. Build national quality standards around medical, not economic, issues.
6. Guarantee fee-for-service option for patients.
7. Take caution when deciding ratios of primary care physicians to specialists.
8. Simplify administrative "hassles."
9. Reform medical liability laws to include caps on jury awards and lawyer fees.
10. Ensure universal access to care for all Americans.

Dr. Todd advised delegates before deliberations began at the meeting, saying, "If the business before you advances reform, then do it. But if it gets in the way, or wastes our energies, or is just plain frivolous, set it aside for a later time...Do not divert us from our primary purpose—health system reform."

PHYSICIANS, POLICY MAKERS TO MEET IN WASHINGTON

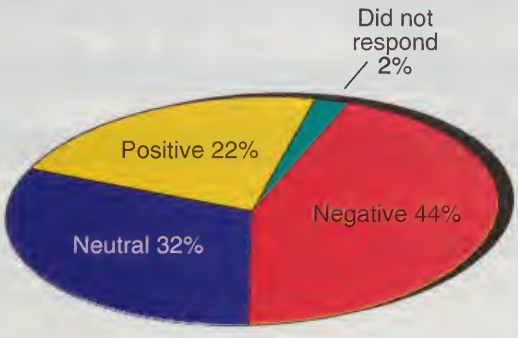
The American Medical Association (AMA) will host an interactive meeting of physicians and key congressional policy makers in Washington, DC, on March 8. The theme for the day-long meeting is "Partnership in Action: Uniting for America's Health."

According to AMA President Joseph Painter, MD, the meeting will allow physicians to exchange views with the key players in the health system reform debate. "Specific health care reform proposals are being hammered into policy," he says. Now is the time to ask questions and voice concerns."

The meeting will be held at the Stouffer Mayflower Hotel. For more information about program content or fees, or to register, call the AMA at (800) 262-3211.

Physician Reaction to U.S. Health Security Act

The majority of U.S. physicians reacted negatively or were neutral about President Clinton's proposed Health Security Act, according to an AMA physician poll released in December 1993.



State Society Offers Drug Cost Information

Physicians across the state agree that they need an unbiased source of information on prescription drugs. Based on the results of a recent statewide survey, Pennsylvania physicians are especially interested in reliable drug cost information. In response, the State Society's Center for Professional Drug Education and Information will periodically publish in PENNSYLVANIA MEDICINE cost information for medications in various drug classes. The first drug class in this series is nonsteroidal anti-inflammatory drugs (NSAIDs).

NSAIDs are most commonly prescribed for their anti-inflammatory effects; however, they are also effective analgesics and are useful for the relief of mild to moderate pain. Clinically, there are no clear guidelines to assist in selecting the most appropriate NSAID for a patient. Physicians should base selection on clinical experience, patient convenience, side effects, and cost.†

The chart below presents the average wholesale price of a one-month regimen plus a $3.00 dispensing fee. While prices vary from pharmacy to pharmacy and region to region, this chart provides physicians with a means for making relative comparisons among NSAIDs. The drugs are listed in alphabetical order by brand name.

For a free pocket card or wall chart version of this information on NSAIDs, contact the Society's Center for Professional Drug Education and Information at (717) 558-7750 or (800) 228-7823.

†*Drug Facts and Comparisons, 1994 Edition.* Facts and Comparisons, A Wolters Kluwer Company, St. Louis, MO, 1994, p. 1210.

The Center for Professional Drug Education and Information was established to assist in retrospective drug utilization review for Pennsylvania Medicaid prescriptions and to provide Pennsylvania physicians with an alternate, non-biased source of information on prescription medications. The Society is working with the Pennsylvania Department of Public Welfare and Health Information Designs, Inc., on this program. Our goal is to help physicians make better prescribing decisions through education.

Nonsteroidal Anti-Inflammatory Drugs: Cost Comparison of One Month of Therapy

BRAND NAME	GENERIC NAME	ADULT DOSING	QUANTITY	BRAND COST	GENERIC COST
Anaprox	Naproxen Sodium	275 mg BID	60	$45.78	NA
Ansaid	Flurbiprofen	50 mg QID	120	$87.55	NA
Ascriptin	Aspirin	325 mg QD 12 tablets QD	360	$34.21	$11.84
Clinoril	Sulindac	150 mg BID	60	$56.81	$46.54
Daypro	Oxaprozin	600 mg QD (2 tablets)	60	$67.38	NA
Dolobid	Diflunisal	500 mg BID	60	$51.85	$58.33
Disalcid	Salsalate	750 mg QID	120	$55.92	$14.88
Feldene	Piroxicam	20 mg QD	30	$71.61	$64.52
Indocin	Indomethacin	25 mg TID	90	$46.63	$10.50

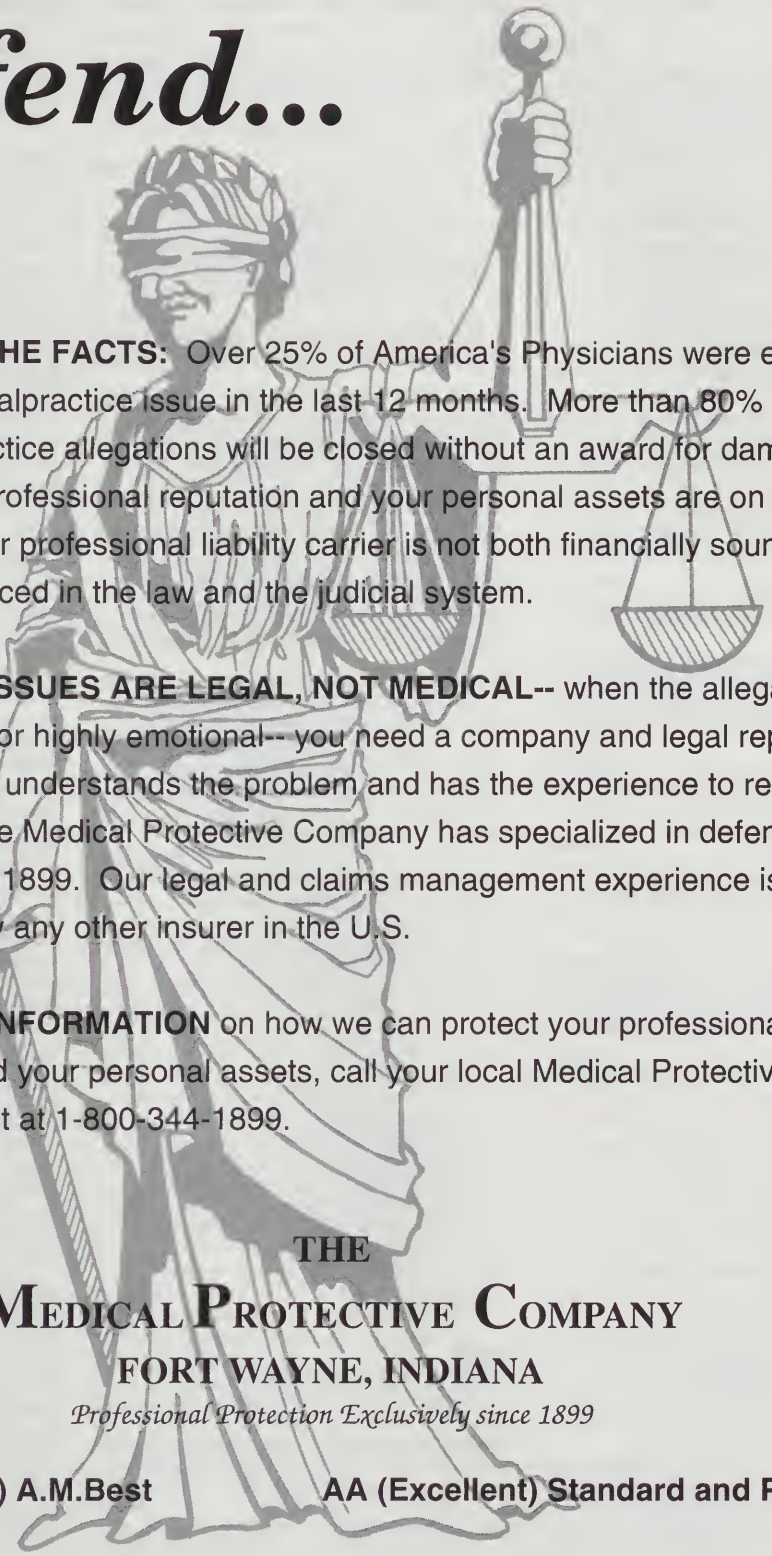
...a promise to defend...



HERE ARE THE FACTS: Over 25% of America's Physicians were embroiled in a malpractice issue in the last 12 months. More than 80% of those malpractice allegations will be closed without an award for damages. Your professional reputation and your personal assets are on the line when your professional liability carrier is not both financially sound *and* experienced in the law and the judicial system.

WHEN THE ISSUES ARE LEGAL, NOT MEDICAL-- when the allegations are frivolous, or highly emotional-- you need a company and legal representation that understands the problem and has the experience to resolve the issue. The Medical Protective Company has specialized in defending doctors since 1899. Our legal and claims management experience is unmatched by any other insurer in the U.S.

FOR MORE INFORMATION on how we can protect your professional reputation and your personal assets, call your local Medical Protective General Agent at 1-800-344-1899.

Physicians' HEALTH • PROGRAMS

PHYSICIANS WANTED

Western Pennsylvania—Board Certified or prepared emergency physicians needed for staffing a community hospital emergency department near the Ohio/Pennsylvania border. Please send CV to P.O. Box 99431, Pittsburgh, PA 15233-0431.

Pennsylvania—Physician group seeks full-time and part-time physicians for an emergency department of community hospitals in central and western Pennsylvania. Please send resume to P.O. Box 99431, Pittsburgh, PA 15233-0431.

Pittsburgh, Pennsylvania—Penn Group Medical Association (PGMA), a 100-physician multi-specialty group practice affiliated with the largest HMO in Pittsburgh, is seeking BE/BC physicians in: family practice, internal medicine, pediatrics, ob/gyn, and psychiatry. We are formally affiliated with major teaching hospitals and leading community hospitals in Pittsburgh. PGMA serves eight ambulatory care centers, all conveniently located near cultural, educational, recreational, and corporate activities. Excellent salary, fringe benefits, and incentives. For confidential consideration contact: Angela Lascola, HealthAmerica, 5 Gateway Center, Pittsburgh, PA 15222, or call collect (412) 553-7502.

Physician Wanted—Internal Medicine/General Practice must be bilingual English/Spanish physician full- or part-time to join fine busy practice near Philadelphia suburb of Cheltenham. Please call M. Finnegan (215) 549-3000.

Full-time emergency room position available in a 400-bed suburban hospital with 44,000 visits. Board certified/eligible in emergency medicine or other specialty with emergency room experience. Excellent salary/benefit package. Contact: Clarke Hankey, MD, Emergency Department, St. Clair Hospital, 1000 Bower Hill Road, Pittsburgh, PA 15243; (412) 561-4900.

Physician—Part-time/weekends modern multi-specialty/urgent care center in northeast Philadelphia suburb. Potential for future full-time position, if desired. Contact Mrs. Lipson, 215-638-0666.

Established primary care practice. Desirable location near four hospitals. Excellent schools, theatre, symphony, and other cultural activities in northeastern Pennsylvania. Will assist in transition. Physician retiring. Reasonable terms negotiable. (717) 287-3257.

Emergency Physicians—Emergency Physician Associates is seeking quality ED physicians for a variety of practice opportunities. Director and staff positions are available. EPA contracts with hospitals in NJ, PA, and MD for the provision of emergency medicine, urgent care and industrial/occupational health services. Our client hospitals are located in rural to urban areas with patient volumes ranging from 10,000 to 75,000. At EPA we offer physicians competitive compensation, flexible schedules and shifts, occurrence-based malpractice insurance, a variety of practice settings to choose from, cooperative working environments, and supportive medical directors and corporate staff. Interested candidates may contact EPA at 1-800-848-EPA-1.

Physicians, Excellent Benefits/Bonus Packages—Physicians are needed to fill full-time positions in the field of administrative medicine in the PA Department of Labor and Industry, Bureau of Disability Determination, Harrisburg, PA. Employes serve as a disability claims review physician or a disability specialist physician. Disability specialist physician candidates must have 3 years of experience and/or residency training in the medical specialty or subspecialty practice. All candidates must possess a license to practice medicine in the Commonwealth of Pennsylvania as issued by the State Board of Medical Education and Licensure or the State Board of Osteopathic Examiners. These are civil service positions. For more information, call Ruth Wishard at 717-783-3620 Extension 369 between 7:30 am - 3:30 pm. The Commonwealth is an equal opportunity employer.

General/Vascular Surgeon (BC)—Excellent opportunity for board-certified general surgeon, preferably with special interest in vascular surgery, to associate with senior surgeon. Three BC general surgeons currently cover population of 80,000 people within a 10 mile radius of a beautiful small town close to Baltimore. Contact: Lee Johnson, Vice President of Professional Relations, Hanover General Hospital, 300 Highland Ave., Hanover, PA 17331; 1-800-673-2426, Ext. 4289.

Emergency Medicine Physician—Pennsylvania, suburban Philadelphia. Large community teaching hospital, including burn center, heart program, level II trauma center, and paramedic training institute. 36,000 visits with double and triple coverage. Exceptional compensation and benefits. Must be EM board certified/prepared. Contact Richard McDowell, MD, FACEP, Chairman, Department of Emergency Medicine, Crozer-Chester Medical Center, Upland, PA; 215-447-6253.

Do you know someone who needs nursing care in their home?

We have a special person to take care of your special person.

Are your patients entitled and/or eligible for Medicare benefits? If you are not sure call **MEDICAL PERSONNEL POOL** and we will help you get the answer. Bear in mind that a person need not be a Social Security recipient or over 65 to receive Medicare services. People who are disabled for 2 years or more are eligible as are people who are in dialysis for 6 months of longer. **MEDICAL PERSONNEL POOL** provides a full range of **HOME HEALTH SERVICES,** as well as private duty nursing. We provide most of these services in the home as well as in the hospital and nursing home.

A Skeptic's Turn: Memorial to a Magnificent Medical Myth

J. Mostyn Davis, MD

Health education is a magnificent medical myth! Nineteen sixty-four was my sixth year in clinical solo family medicine, and when the surgeon general's report on cigarette smoking was issued, I confidently felt that since there was no longer any more scientific doubt about the harmful effects of cigarette smoking, thousands would quit. They did—a few for good, lots for a month, many for a week, but most for only a few days. In my medical naiveté, it was incomprehensible to me that intelligent, rational human beings would continue a practice scientifically demonstrated to be harmful to their health.

Since that shock, it has been all downhill. I am now convinced that longevity, freedom from disease, and well-being depend only to the smallest degree upon the active effects of health education. Collective health improvements in the community derive mainly from the great sanitary advances: pure water, adequate sewage disposal, mandatory food inspection, and other similar measures. Adequate housing, clothing, and nutritious food also contribute to the overall picture of improving health. Immunization is another program which has preserved millions of lives.

When an individual is faced with a health decision which requires the sacrifice of some part of their lifestyle, the whole picture changes. Everyone knows that smoking cigarettes is harmful. The cost of this voluntary health-damaging activity in terms both of human life and medical costs is staggering—billions of dollars yearly, and thousands of lives.

Radio and television advertisements have been banned, warnings have been placed on cigarette packs, and smoking is being banned in more public places. What is the effect of all this educational exposure? Need I tell you?

Consider the AIDS situation. We are currently entertaining a national venereal disease epidemic. Has health education had more than a minuscule effect in this area? Alcoholism, the real drug problem, is a disease almost as old as man himself and is becoming increasingly prevalent. Other drugs of abuse are used with varying degrees of regularity depending upon the availability of the drugs and the diligence of the law enforcement programs—not upon health education.

On and on we could go, but I'm sure you understand the point I am striving to make here. A generation of school children, taught the basis for a good diet, flocks to fast-food chain restaurants where salt, sugar, and fats are served in abundance. Despite the well-known and proven protective effect of fluoridation, dental disease is still a problem. Obesity is a national disease, as is lack of exercise, especially in regard to our children.

You may point to the decrease in cardiovascular deaths as an example of education leading to improvement in health. However, we know that many diseases follow a wax and wane pattern, and it appears that the decline in CAD mortality began even before the exercise and healthy eating thing began.

Do you wonder why I heave a deep sigh when yet another government task force is announced which produces hundreds of pages of testimony devoted to the same tired educational recommendations? More health education in the schools, more lectures, pamphlets, seminars, etc.

The health planners are fooling us. Those who profit most from these grand schemes include paper manufacturers, copy machine companies, and computer industries.

The real factors which have the greatest effect on our health and longevity appear to be heredity, environment, and lifestyle. There is nothing we can do individually about the first, we seem to have progressed somewhat with regard to the second, but we have not a good track record with regard to the third. ○

Dr. Davis, a former Society trustee, is a family physician at Geisinger Medical Center, Danville.

SOMETIMES THE BEST DEAL IS THE ONE YOU HAVEN'T HEARD ABOUT.

Maybe you haven't heard about the Medical Inter-Insurance Exchange (MIIX). After all, we're a relatively new player in Pennsylvania's medical professional liability insurance marketplace.

But ask your counterparts in New Jersey, and you'll find we've been getting rave reviews since we wrote our first policy there in 1977. We're proud that 98 percent of our 9,000 insured physicians renew their policies each and every year. With such an outstanding track record, we must be doing something right.

Perhaps it's our **innovative products**, such as our new **$500,000** HIV benefit that provides income protection — at no additional charge — for physicians who become HIV positive. We were the first professional liability insurer in the state of Pennsylvania to offer this coverage.

Or maybe it's our **commitment to service**, which includes 24-hour customer assistance and a claims staff that's the best in the industry. Our insureds know that MIIX makes sense financially, too, considering our outstanding discounts for new and part-time practitioners. We also offer flexible premium payment plans that help you manage your money.

Because MIIX is a **physician-owned company**, you can be assured that everything we do is designed with your best interests in mind. Call us today so you can join your peers who are already benefiting from the MIIX difference.

12 Casey's Reform Proposal Holds Pitfalls for Pennsylvania Physicians

As the governor's health system reform proposals have changed during the past year, so has your Society's response. Outlined in this article are the Society's refined interpretations and analysis of such issues as universal coverage, networks, and employer mandates.

Cover by SpectraComp, Mechanicsburg

22 Vice Speaker Considers Realities of '90s Medicine

Donald H. Smith, MD

In this first in a series of interviews with the Society's newly elected board members, Donald H. Smith, MD, vice speaker of the House, discusses his Society experiences and responsibilities, and his thoughts on health system reform.

28 Building Legacies to Medicine

For the past 34 years, LeRoy Erickson has served the State Society in a number of positions, most recently—and most notably—as executive director of The Educational and Scientific Trust. Prior to his retirement in February, he talked to us about his work at the Society and the satisfaction of leaving something behind that is lasting.

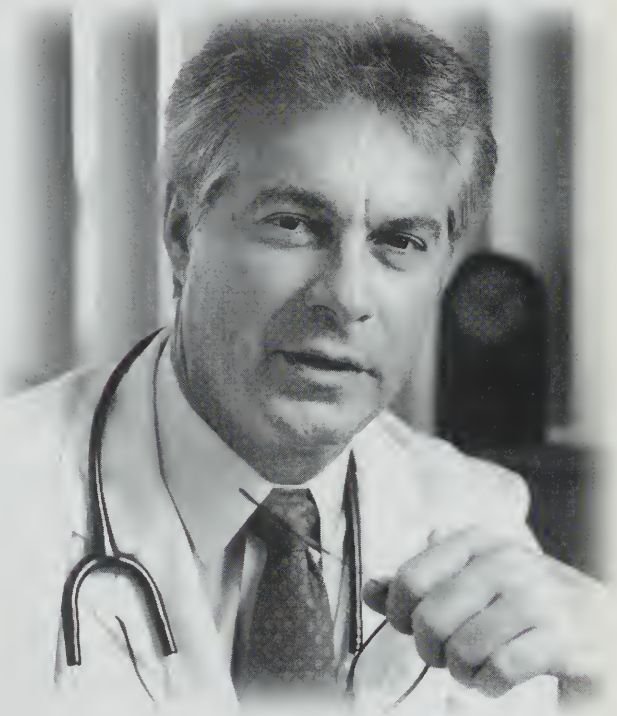
"Unfortunately,

he was already sitting in my examining room. This guy was a walking liability suit looking for a victim. He was angry, non-compliant. It was one of those rare, no-win cases and, well, I guess my number was up.



Then I remembered PMSLIC. So I stepped into the next room and gave them a call. They put me in touch with a member of their Risk Management team, who advised me of the relevant legal issues and the implications of each of my alternatives. Right on the spot. As a result, I was able to make the best medical recommendation with the peace of mind that comes from knowing my legal interests were also protected. I guess that's what it's all about. Peace of mind. The kind you only get from people who really take the time to help. That's excellent service. I'll never change carriers."

MEDIGRAM

COSPONSORS SOUGHT FOR U.S. ANTITRUST BILLS: *THE SOCIETY IS URGING PHYSICIANS TO CONTACT THEIR U.S. SENATORS AND REPRESENTATIVES TO COSPONSOR S. 1658 AND H.R. 3486,* two bills aimed at ensuring that physicians and their patients—not government, insurance companies, or corporations—control patient care in any reform proposal. The Society says there are many dangers which might result from large-scale reform of the U.S. health care delivery system, including the possibility that important patient care decisions will be governed not by clinical necessity, but rather by the financial bottom line. The Society suggests that physicians include the following in their correspondence: 1) physicians must be relieved of antitrust constraints and afforded "safe harbor" protections, so their clinical concerns are given full consideration; 2) health plans should be required to establish a medical staff with defined rights regarding the plan's medical policy, utilization, quality, and credentialing and management issues; and 3) financial and regulatory barriers must be removed to support the development of physician-sponsored networks and insurance plans. Physicians should also outline examples of the restraints they face under the current antitrust law. Please copy any correspondence to the Society.

SENATE COMMITTEE DEBATE FOCUSES ON LIABILITY REFORM: State Society President Martin A. Murcek, MD, and PMSLIC Board Chair Betty Cottle, MD, were among eight panelists to testify at a state Senate Public Health and Welfare Committee meeting on medical liability reform conducted by Committee Chair Senator Hardy Williams (D-Philadelphia) on February 23. The Society, taking a "pro-reform" stance, testified on the excessive costs of litigation in the current civil justice system, the high cost of defensive medicine, and the need for reform to protect providers as decisions in managed care systems become more economical rather than clinical in focus. PMSLIC President Sarah Lawhorne, Esq., also testified pro-reform on behalf of the Defense Institute. Although legislation was discussed, Senator Williams has not yet scheduled a specific bill for committee vote.

BEAVER COUNTY GRANTED FEDERAL TAX EXEMPTION: Through Society efforts, the Beaver County Medical Society on February 7 was granted a federal tax exemption under Section 501(c)(6). The IRS initially rejected the county society's tax exemption application. For more information on this and other Society legal activity, see pages 24-25.

SOCIETY COSPONSORING SYMPOSIUM IN APRIL: The Society is cosponsoring a symposium to be held April 15-16, 1994, at the Dickinson School of Law, Carlisle. Entitled "Genetic Engineering: Prescription for Perfection or Roadmap for Disaster?," the symposium will feature nationally known speakers discussing the medical, ethical, and legal implications of genetic engineering and the Human Genome Initiative. For information, call the Society at (800) 228-7823.

DOCTOR'S DAY KITS AVAILABLE TO COUNTY SOCIETIES, HOSPITALS: Publicity kits for county medical societies and hospitals are available to use in celebrating Doctor's Day, nationally recognized each year on March 30. The Society is also requesting the governor's proclamation, and the state alliance (PMSA) and county alliances have scheduled a variety of events. For more information on Society activities, call the Department of Public Affairs at (800) 228-7823. For information on local events, call your county alliance office, or PMSA at the number above.

SPRING ASSEMBLY REGISTRATION DEADLINE QUICKLY APPROACHING: March 18 is the last day to register for the Society's Spring Assembly, "Forging Alliances...Assuring Your Future," to be held April 19-20, 1994, at the Harrisburg Hilton and Towers. Richard F. Corlin, MD, vice speaker of the AMA House of Delegates and immediate past president of the California Medical Association, will offer the keynote address, "What is the Future?" For program information, see pages 42-43. To register, call the Department of Meeting Services at (800) 228-7823 or (717) 558-7750.

SOUND PROTECTION

Other companies may change their tune every few years, but Princeton's dedication to quality service, aggressive claims handling and a strong financial base remains constant.

One key to insurer stability is capable, consistent management. At Princeton, we have a team of experts with the continuity that leads to sound decision-making every day.

The result: an unwavering commitment to the doctors we protect.

Princeton. It's worth it!

Further Thoughts on Health Reform

John W. Mills, MD
Medical Editor

In his State of the Union message, President Clinton once again focused nationwide attention on health system reform, and rather emphatically, with his pen, "drew a line in the sand" as a formidable challenge to Congress.

Debate over this issue had become low-key since the president's package was presented to Congress last September. However, the pace quickened in December at the AMA interim meeting in New Orleans. Clinton quickly "made hay" over the AMA debate by calling together, at a "staged" Washington news conference, a number of national physician groups who "support" his plan. In the spirit of the NFL Super Bowl, it was a nice end-run around the AMA, but more subtly and more importantly, he was splitting us into factions.

"We have fought among ourselves and made it known—divided our course. For what?"

Of course, the AMA's health reform debate—healthy for all federation members and for each one of us, member or not—was reported as division in the ranks, and organized medicine took a direct hit.

Make no mistake about it, Mr. Clinton is a skilled politician who will play the odds and use any tactic to cajole Congress and divide the health provider community—physician against physician, specialist against specialist, nurse against physician, physician against hospital, and so on, ad infinitum.

A good example of physician-against-physician strife occurred recently on a smaller scale in our own State Society. A resolution adopted by the 1993 House of Delegates calls for a statewide charge class for Medicare patients, replacing the four-tier charge class in place since Medicare's inception. Philadelphia and Allegheny County physicians are paid the highest fee (in simple terms), while rural physicians are paid the lowest fee for the same code or procedure. There are two intermediate class areas used for counties of intermediate size, and the few remaining are somewhere in between the highest and lowest.

State Society staff have completed the complicated process required by HCFA to petition for a statewide charge class. While the House action was not unanimous, the democratic process assures reasonable equanimity.

Philadelphia County Medical Society has opposed the change and expressed this objection to HCFA. This is certainly their right. However, HCFA will perceive our division, and you can be sure other areas of the federal government will also take note—including the Clintons.

My own thoughts on this are straightforward. We have fought among ourselves and made it known—divided our course. For what? If we get any type of federal health system reform, we'll surely have a *nationwide charge class*, with little to say about it.

If you have been following state health reforms around the country, you will have seen some signs of trouble on several fronts. These signs should be warnings to the citizens of this country, as well as to us and our profession.

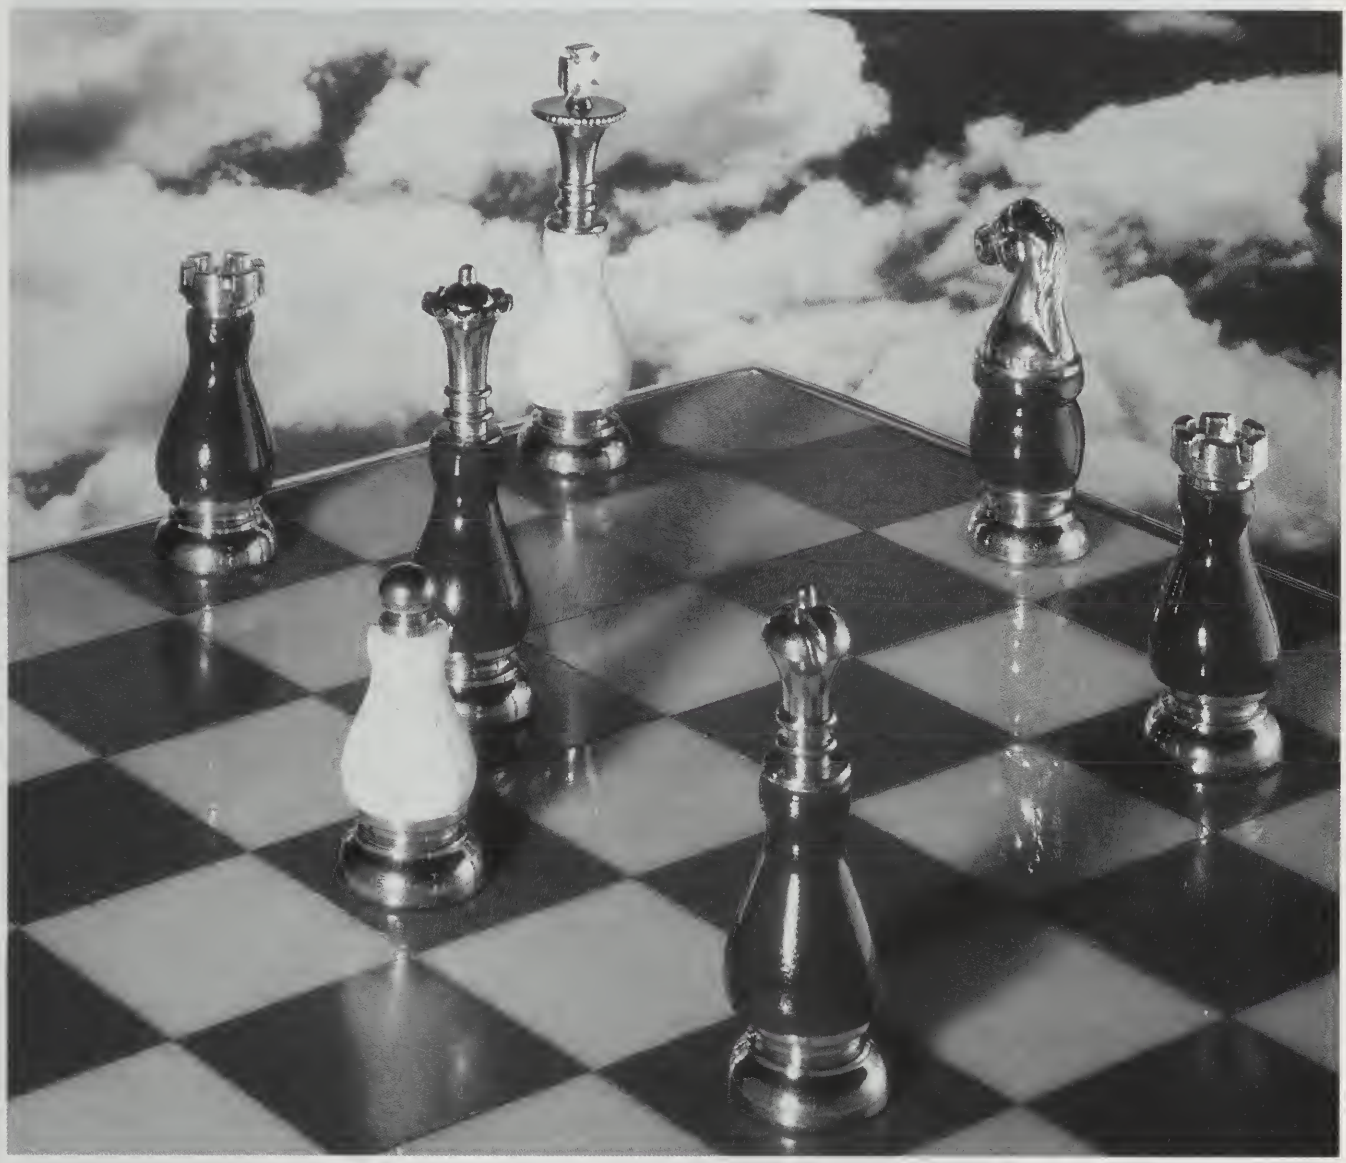
For instance, while physicians in Vermont wholeheartedly supported the single-payer system, put forth by the legislature, for a seat at the table, the system is rapidly being implemented without them! And, TennCare of Tennessee has already lost physicians who signed up a year ago—problems with reimbursement and approval for medically necessary treatment.

It sounds like lots of fun ahead...maybe "nightmare" would be more realistic. Fifty different state plans with a super-imposed federal system will be a real "mish-mash." Portability? I doubt it without a mess of red tape. Mass confusion? You bet!

I've said it before and don't be surprised to read it again and again: We have the largest audience in the country—our patients—and each one of us must answer their questions honestly and convincingly about these issues.

Insurance reform, antitrust reform, tort reform, simplification, and standardization. These reforms we need now. Once they are in place, the system can be fine-tuned and continue to be the finest health system in the world.

That is the thrust of the AMA's debate and stance. Fellow members, physicians nationwide, *unite*. It's our only chance.



In claims, it's the endgame that counts

A malpractice claim brought against a physician brings to mind two things: reputation and money. We consider a third: the bond of care and trust between physician and patient.

Successful endgame results resolve all three. To do that, you need a consistent, winning strategy. Strategy that considers the merits of the claim, the complex court system and the National Practitioner Data Bank. Knowing when **and how** to fight is crucial.

In little more than a decade, we've achieved checkmate in over 95% of the cases taken to court. A vigorous defense, a successful conclusion for our policyholders. And always, your participation in every decision. When we need to settle a claim, settlements are fair to both parties.

We're here to serve physicians, patients and the healthcare field. How is this done? With financial stability, competitive premiums, integrity, and the right team members.

Physicians Insurance Company is dedicated to making all these elements work together. That's why we get to endgame with confidence. That's why we'll continue to be here for our policyholders.

Physician-Assisted Suicide: *Protecting Patient Interests*

Martin A. Murcek, MD

While the public and political debate about providing access and funding for medical care for all Americans continues, another related issue is being discussed apace: The medical community's role in helping patients *end*, rather than prolong, their lives.

The recent news coverage of the activities of "physician-assisted suicide" advocate Dr. Jack Kevorkian has unfortunately been predictably topical and sensationalistic, with more emphasis on the macabre mechanics of suicide than upon the tough philosophical and ethical problems at the heart of the issue.

Martin L. Cook, PhD, in an editorial for the *Archives of Internal Medicine* [December 23, 1993], noted that advances in medical technology "have raised for many patients the specter of spending their final hours, days, or months as captives of a mindless medical system, more clever than wise, that will sustain their lives beyond all reason."

Setting aside for the moment the problem of deciding how to allocate medical resources among "the living" and "the dying," I'd like to look at the efforts, or lack thereof, on the part of traditional sources of moral and ethical wisdom, to contribute to this debate in a constructive fashion.

In *Religion In A Changing World,* Abba Hillel Silver notes that "moral standards are changing in our day." The general trend is one of breakdown, Hillel asserts, brought on by the relative prosperity of our society. The thrust of the analysis is that, in the modern world, life is cheaper than ever. That analysis was written in 1930!

Unfortunately, all that is offered by the spiritual community today is that same tired lament that our world is too materialistically and technologically oriented to sustain a philosophical renaissance that can address the death-and-dying issue head-on. We again have observers willing to describe the problem but unable to recommend any solutions.

If moral leaders who refuse or are unable to lead aren't bad enough, we have to deal with those who tend toward shameless self-promotion, as well.

Political, legal, and social factions in Pennsylvania recently fought a long-winded, bruising, and costly battle over the issue of "living wills"—documents that allow individuals to specify what efforts are to be made, or not made, on their behalf when death is imminent. As with all social debates, the usual suspects lined up to lobby government to write their particular brand of religious dogma into law, create a new client category, open new bureaucratic and regulatory vistas (and jobs), or absolve them of legal, if not moral, responsibility for their actions (or lack thereof).

Another article in the same issue of *Archives of Internal Medicine* discusses "physician-assisted suicide" and "voluntary active euthanasia" in terms of a patient's ability to rationally request how his or her physician responds to the end stages of terminal illness. The main point of the article is that the physician's hands are almost always tied by legal issues that claim concern for the patient, but seldom deliver on that claim.

There are too many people in our society today who, having discovered that they are not qualified to *do* anything in particular, attempt to make careers for themselves out of regulating the doings of others. Such people are not part of the solution to society's problems; they *are* one of its problems!

In the end, I believe the physician must always walk a fine line between responsibility to the patient and fidelity to his or her own moral/ethical code. There's nothing unethical about being totally opposed to suicide or euthanasia in all cases, but there's nothing ethical about forcing that opposition upon someone who is suffering physical pain and emotional anguish in the terminal stage of illness or infirmity.

Once again, it is the medical community's responsibility to share with the public its unique experience, so that the interests of society and the patient are protected. ⬡

Wednesday Medical Seminar Series—8:30 a.m. to 3:30 p.m.

MARCH 2, 1994	APRIL 6, 1994	MAY, 1994
Office Management of Heart Disease for the Generalist	**Advances in the Treatment of Diabetes Mellitus**	No Seminar
Course Director: Leonard S. Dreifus, M.D.	Course Director: Jeffrey Miller, M.D.	
Guest Lecturer: Robert Frye, M.D.	Guest Lecturers: Robert Tanenberg, M.D., and Jesse Roth, M.D.	

Seminar Director: Allan B. Schwartz, M.D., Professor and Vice Chair of Medicine, Director, Continuing Medical Education for the Department of Medicine

Full Disclosure Statement: All faculty participating in continuing medical education programs sponsored by Hahnemann University are expected to disclose to the audience any real or apparent conflict(s) of interest related to the content of their presentation.

Statement of Accreditation: As an organization accredited by the Accreditation Council for Continuing Medical Education (ACCME), Hahnemann University designates this continuing medical education activity as Category 1 of the Physician's Recognition Award of the American Medical Association. One credit hour may be claimed for each hour of participation by the individual physician.

RECOGNIZING THE REALITY OF ADDICTIVE DISEASE

My writing this letter is precipitated by three events which came to my attention in rapid succession within the past several weeks.

1) A call from an attorney consulting me about a case of malpractice. His client is a young woman—an executive secretary—who had been sober for eight years following successful treatment of alcoholism. She developed a chronic cough and sought medical treatment, telling her physician she was a recovering alcoholic and must avoid addictive medications. He prescribed Hycodan, refilling her prescription for six ounces, four times within a three-week period.

By the end of the second week, the young woman was confused and making gross mistakes at work. When her employer confronted her with the drastic change in her behavior, she broke down and told him of her history of alcoholism and that she was now taking cough medication. She was promptly fired. She is now suing her physician for prescribing a highly addictive drug after she had told him she was an alcoholic. According to the attorney, the physician is claiming he was unaware that Hycodan is addictive.

2) A 31 year-old woman admitted for relapse of narcotic addiction. She had been "clean" for three years and had extensive dental work done. She told the dentist that she was a recovering addict, and he gave her a prescription for 12 tablets of Percocet, which she consumed within 24 hours, and was back at her drug-seeking behavior.

3) A 42-year-old accountant admitted *because of* severe benzodiazepine addiction. He had been treated for alcoholism and was four-years sober when he began having anxiety attacks. His physician prescribed Xanax, and when asked if he could take this medication with his history of alcoholism, he was told not to worry.

In all three cases the patient was the victim, having been thrown into relapse by well-intending physicians. In case one, the physician may also be a victim, since a defense that he was ignorant that Hycodan is addictive is not likely to be of much help in a malpractice suit.

The real culprit in all three cases is *the educational system,* both at the graduate and post-graduate level, which fails to give adequate instruction on addictive diseases. There are fairly valid statistics that perhaps *one-third* of all general hospital days are due, in one way or another, to the consequences of alcoholism and other chemical dependencies.

Logic would conclude, then, that approximately 30 percent of the medical curriculum should be devoted to these conditions, but we might compromise for 15, 10, or even five percent. Is it not unconscionable that in many medical schools the time allotted for diseases that are responsible for *30 percent* of all hospital days is *.05 percent* of the curriculum, hardly enough to be noticeable?

Many physicians discover that they have been short-changed, and obtain more information on their own by reading and attending seminars. Others rely on what should have been an adequate medical education, and may wake up to find themselves defendants in malpractice suits.

My plea is for medical and dental schools to recognize the reality of addictive disease and prepare doctors and dentists to recognize them, and for all graduate programs to include addictive diseases in their training programs. I strongly urge hospitals, medical societies, and dental societies to pick up the slack and sponsor seminars on addiction.

Let me close with just two nuggets to help avoid mishaps such as those in the three cases cited.

1) Once a person has been an alcoholic/drug addict/chemically dependent person, he/she has a high vulnerability for relapse for the rest of his/her life.

2) Cross-addiction is a fact of life. A person who has been addicted to any mood-altering chemical is a high risk for becoming addicted to any other mood-altering chemical.

But let these two nuggets not comprise our entire knowledge about addictive diseases.

ou're on solid ground with the Dodson Plan.

More than 75 years ago, Bruce Dodson, Sr. pioneered the concept of the dividend plan for workers' compensation insurance. Dodson Group has been helping businesses like yours save on premium costs ever since.

The Dodson Plan gives you the opportunity to earn a dividend each year, depending on the claim experience of all insured members. We carefully select those who participate, creating the greatest potential for you to save.

Pennsylvania Medical Society endorsed the Dodson Plan in 1973. Since then, participating members have earned a total of **$2,309,240** in dividends. Share in the savings!

You're on solid ground with Dodson.

Casey's Reform Proposal Holds Pitfalls for Pennsylvania Physicians

In the year since announcement of Governor Casey's health reform proposals, much state as well as national debate has occurred. As debate continues, the governor's, as well as the State Society's, proposals are being refined. This synopsis of our views on Senate Bill 1202 and House Bill 1958—to be continued next issue—is an update of our response to Casey's proposal as of January 1994. Next issue, we will address insurance market reform, bureaucratic intervention, quality assurance, practice parameters, limited administrative relief, tort reform, and the primary care physician shortage.

Universal Coverage

Under Governor Casey's health system reform proposal, virtually all Pennsylvanians would be guaranteed, and required to obtain, coverage of a defined benefit package. The universal coverage provisions do not apply to Medicare eligibles, federal employees and their families, and persons eligible for a limited religious exemption. The Society applauds the governor for taking the initiative to put forth a universal coverage proposal, and we especially support the decision to cover preventive care for pregnant women and children. However, the Society believes that individuals who can demonstrate financial responsibility for catastrophic care should not be required to purchase insurance coverage.

Scope

The proposal outlines a comprehensive package—but generally leaves the details to be articulated by the Health Security Board in a Health Security Plan. Individuals may buy supplemental coverage for more benefits and/or less cost-sharing. The guaranteed package must include all the currently mandated benefits and maternal and child health services. In addition, provisions in existing law that require coverage of limited license practitioner services apparently would continue.

We are concerned that the proposal allows the Health Security Board to adopt too broad of a guaranteed benefit package. A better starting point is the AMA/Society benefit package. While our package is also comprehensive, it does not cover all the services outlined in the governor's proposal and includes durational, cost, age, and other limits. The proposal inexplicably requires the board to incorporate all the current mandated benefits—irrespective of their value in relation to other services. While some of the current mandates—such as childhood immunizations—clearly should be in the final guaranteed benefit package, forcing inclusion of all the current mandates may result in the exclusion of services determined to be of higher value.

We question mandatory reimbursement of non-physician care. It unnecessarily limits legitimate efforts to control costs and maintain quality. The incentives for plans to keep premiums low are sufficient to assure coverage of non-physician care when it is truly more cost effective.

Patient cost-sharing

The guaranteed package would include uniform patient cost-sharing requirements. Individuals could not purchase catastrophic-only coverage with a high deductible (e.g., $1,000). We support patient cost-sharing as it is an effective way to control costs. We agree that the cost-sharing for primary care office visits and preventive care should be "minimal." Patients should not be discouraged from obtaining these services as they often can reduce costs in the long run and are important for maintaining patient wellness. We recognize that patient cost-sharing can be an insurmountable barrier to low-income persons and are concerned that the proposal does not explicitly authorize reduced cost-sharing or subsidies to help low-income persons pay these requirements. Individuals also should be able to purchase coverage with a full range of patient cost-sharing options—including catastrophic coverage only with a high deductible (e.g., $1,000)

24-hour coverage

The door is open for 24 hour coverage i.e., automobile and workers' compensation in the guaranteed benefit package. We generally support 24-hour coverage, but object to forcing auto accident victims and injured workers into a managed care system—as would result from inclusion of these services in the coverage guaranteed by the Casey proposal.

Health Security Board

A new quasi-public corporation called the Health Security Corporation (HSC) would oversee and administer the system with the Departments of Health and Insurance. The corporation would be governed by a nine-member Health Security Board.

Powers

The board has broad and largely unchecked powers. Many details are left to the board to develop in a Health Security Plan, and the board is exempt from having the plan and its regulations approved by the Independent Regulatory Review Commission (IRRC).

The proposal leaves far too many details to the discretion of the Health Security Board. While the legislature has the authority to modify or reject the Health Security Plan, the board's plan will nonetheless go into effect if the governor vetoes the legislature's action, and the legislature is not able to override the governor's veto with at least a two-third's vote in each chamber.

The required opportunities for public input on the Health Security Plan are inadequate. The proposal only requires public input through two sets of public hearings and written comments during a narrow 30-day window period. One set of the hearings are held and the written comments are due after the board has developed its plan—and the board appears to have no authority to make changes based upon the post-mortem input it receives.

We oppose the board's IRRC exemption because it eliminates an important forum to remedy arbitrary agency actions.

Composition

The board would be appointed by the governor and include: the Secretary of Health, the Secretary of Public Welfare, the Insurance Commissioner, and representatives of business (2; one small business), labor (1), consumers (1), individual providers (1), and health facilities (1).

The Society is concerned with the lack of physician representation on the board—especially given its authority and responsibilities regarding the defined benefit package, outcomes measurement, and practice parameters. While the law currently requires the Secretary of Health to be a physician, there are continuing attempts to remove that requirement, and the secretary's administrative duties preclude active clinical practice. In addition, the lone individual provider could be filled by a non-physician.

We are further concerned with the appointment process. No provision is made for nominations or other input from professional and other groups that are knowledgeable regarding persons who possess the necessary expertise. The net result is likely to be appointments highly influenced by political considerations—rather than primarily based on merit.

Clinical Advisory Council

A Clinical Advisory Council would advise the board on the specifications for the guaranteed benefits package, specifications of appropriate practice parameters, the study and efficiency of new and experimental procedures, and other clinical and miscellaneous matters at the request of the board.

The council would be chaired by the Secretary of Health and include at least nine other non-salaried private members appointed by the board, including two physicians (at least one primary care physician), a hospital representative, two mid-level health practitioners (at least one nurse), a health clinician, one biostatistician, a health economist, and a health researcher.

Our concerns with the board's composition would be lessened if the board was required to consult with appropriately composed technical advisory committees on clinical matters. However, instead, the board will be advised on these matters by a so-called Clinical Advisory Council that is clinical in name only.

The council can include only two physicians, and there is no requirement that the physicians be in active clinical practice—as opposed to being academicians, medical executives, or retired physicians, who often are not familiar, or up-to-date, with the day-to-day clinical and other problems encountered by actively practicing physicians. None of the non-physicians have the expertise to make judgments on clinical matters.

While the board is authorized to appoint other clinical advisory committees, there is no requirement for a provider technical advisory committee. Indeed, the board is instructed to use the Pennsylvania Health Care Cost Containment Council (PHC4) board as its interim data technical advisory committee. The PHC4 Technical Advisory Committee would have been a better choice.

Health Care Networks/ Regional Competition

The health care delivery and financing system would be radically restructured under the Casey plan.

Pennsylvanians, including Medicaid recipients, would be required to obtain their guaranteed coverage by enrolling in a health care network through the Health Security Corporation, which would act like a single statewide health purchasing cooperative. No provision is made for employer self-insured plans.

Although the required community rating obviates the need for small employers to join forces to better spread the risk and increase their bargaining power, health purchasing cooperatives may be useful in reducing network marketing and other administrative costs for small groups.

However, the radical restructuring of the health care financing and delivery systems envisioned by the Casey proposal is bureaucratic overkill. The problems of small employers can be resolved by permitting voluntary purchasing cooperatives—without forcing an additional, potentially expensive layer of bureaucracy on all employers.

Note: A federal waiver would be required to mandate Medicaid enrollment. Medicaid services not covered by the guaranteed benefit package—such as long-term care—would continue under the existing Medicaid system.

Regions

Health care networks would compete in regions that would be established by the Health Security Board, using the nine existing PHC4 regions as a starting point. Networks would be required to service the entire region. The requirement that networks service the entire region will unnecessarily restrict competition—especially if the Health Security Board adopts the PHC4, or equivalent sized, regions.

The PHC4 regions encompass multiple counties. Requiring networks to service such massive areas will limit the "competition" to monopolistic mega-networks. Small local networks will not be able to survive unless they are able to subcontract with a large regional network. The net result will be that providers and consumers will have little bargaining power when dealing with health care networks on important matters affecting access and quality.

In addition, the hierarchy of large networks will be too distant from the local community to appropriately respond and tailor programs to unique community needs.

Network selection

Individuals—not their employer or the state (in the case of Medicaid recipients)—would select the health care network of their choice from among those competing in their region. Allowing individuals to select the plan of their choice encourages competition and empowers individuals—rather than others such as employers, the government, and health care networks—to control their health care decisions. However, the proposal significantly cuts back on individual choice by not allowing individuals to select catastrophic-only coverage with a high deductible and mandating managed care.

Provider autonomy/network selection

Physicians and other providers could enroll in multiple health care networks. However, there is no "any willing provider requirement"—i.e., no safeguards would limit the grounds upon which health care networks could exclude physicians. →

One of the Society's major concerns with the Casey proposal is the lack of any safeguards to prevent the inappropriate exclusion of providers from health care networks and to otherwise assure that health care network efforts to control costs do not adversely affect quality.

Antitrust reform is also needed to provide a level playing field when physicians and other providers negotiate with networks. Otherwise a few monopolistic networks will dominate the market and have little incentive to compete for quality providers.

Employer Mandate/ Subsidies

The guaranteed coverage would be primarily financed by mandated employer contributions and employee premium-sharing. Subsidies would be provided to small employers, low-income persons (including Medicaid recipients), and the short-term unemployed. The details of these subsidies are left to be developed by the Health Security Board in the Health Security Plan.

In the short run, the Society supports expanding coverage by building on the current employer-based system. However, the long-run goal should be to shift to a consumer choice model, a system that provides for personal ownership of insurance with need-based subsidies for low-income persons. Consumer choice creates powerful market forces to control costs through heightened patient cost-consciousness, while preserving patient freedom of choice, minimizing bureaucracy, and more equitably distributing responsibility for financing expansion of coverage.

An employer mandate also necessitates requiring the Medicare and Medicaid programs to pay their fair share so that employers are not forced to pay for the underfunding of these programs through cost-shifting. Provision also needs to be made for portability of employer-arranged coverage.

Benchmark premium

A "benchmark premium" would be paid into the system for all eligible individuals, including low-income persons and the unemployed. The benchmark premium is the lowest rate in the region plus add-ons necessary to fund the small business subsidies, the Health Security Corporation's expenses, medical education and research payments, and deficits from inadequate appropriations for low-income subsidies.

The Health Security Board would set the lowest rate through a bidding process. Losing bidders could not subsequently lower their rate. Health care networks would be paid their full rate out of the benchmark premium payments and additional consumer contributions for higher cost plans—except that provision is made for risk-adjusted payments and networks would be required to accept the lowest rate in the region for low-income persons.

While the governor has promoted his proposal as not requiring new taxes, employers and employees are taxed thorough the add-ons incorporated in the benchmark premium. We are concerned about the fairness of this funding method. The add-ons would be a fixed amount per employee and would not vary by the income of the employer or employee unless they were entitled to low-income or small business subsidies. Employee unemployment payments also appear to be a fixed amount per employee. Funding the plan thorough the income tax system and "sin" taxes may be more equitable.

We also are concerned about the expense of the add-ons. There are no limits on the amount of these add-ons other than the cap on the administrative expenses of the Health Security Corporation (.01 percent of premiums). Only the administrative costs of the Health Security Board must be approved by the legislature as part of the budget process.

The governor has not provided estimates of the cost of the guaranteed benefit package or the add-ons. Indeed, these estimates cannot be adequately projected given the current lack of details regarding the actual contents of the guaranteed benefit package and the subsidy programs, and the lack of any meaningful caps on the add-ons.

Finally, we are concerned that the "tied to bid" rule may reduce competition. Not allowing networks to adjust to market conditions will result in some networks going out-of-business. These networks are not likely to be around for the next "competition."

Employer contributions/ employee premium-sharing

The mandated employer contribution generally is 90 percent of the "benchmark premium" for full-time employees and 45 percent for part-time employees (less than 20 hours per week or $85 per week). Employees generally would pay the "remainder" of the benchmark "premium" plus the difference between the rate charged by their network and the lowest rate in the region.

We support not requiring an employer to pay the full amount of an employee's premium. Employee premium-sharing helps control costs by making employees more cost conscious when they select their coverage.

Employee unemployment payments

Employees also would pay a premium surcharge to fund the unemployment subsidies. This is another unlimited tax on employees.

State funding

The administration assumes that the legislature will appropriate sufficient funds to fully fund the low-income subsidies so that a full benchmark premium is paid for all Medicaid and other low-income persons. However, the legislation does not provide for full funding of the low-income account through appropriations to Medicaid and other public programs.

We are gravely concerned, based upon past underfunding of the state Medicaid program, that the state will not adequately fund the low-income subsidies, thus perpetuating the cost-shifting in the current system. Indeed, the legislature may even be more inclined to underfund the account as a result of the built-in safety net provided by the add-ons.

In the event the state does not fully fund the low-income account, employers and employees would be required to pick up the difference. If the state appropriated only enough to pay the lowest rate in the region for all Medicaid recipients, employers and employees would essentially be required to fully fund the low-income subsidies for non-Medicaid recipients, the small business subsidies, the Health Security Board administrative expenses, and the medical education and research subsidies. If the state did not even appropriate enough to pay the lowest

rate in the region for all Medicaid recipients, employers, and employees would have to pay that deficit as well.

Mandated Managed Care

All health care networks would be required to be licensed as a health maintenance organization (HMO) and to provide each enrollee with a primary care physician who would serve as their gatekeeper. Enrollees generally would be required to use their gatekeeper for their primary care services.

In addition, absent purchase of a point-of-service option, enrollees generally would need prior approval from their gatekeeper for non-primary-care services and could not use an out-of-network provider.

We support a pluralistic insurance market in which consumers have the freedom to choose from a full range of coverage options—including an HMO or other managed care plan. However, we adamantly oppose mandated managed care because of the restrictions managed care plans impose on patient freedom of choice.

Some patients may voluntarily elect to enroll in an HMO or other managed care plan, especially if the premium is lower. However, others will prefer to enroll in an indemnity plan so that they can freely choose their physicians and make their own health care decisions, free of the dictates of a gatekeeper or their insurer.

Allowing individuals the freedom to select the health insurance plan of their choice also adds an important "safety valve." Network managed care systems will be more concerned about patient satisfaction with network providers if enrollees have the option to switch to an indemnity plan that would allow them to select the provider of their choice. Allowing indemnity plans also establishes a yardstick by which the cost-effectiveness of network managed care plans can be judged.

Indemnity plans—especially "pure" indemnity plans with no managed care—may have difficulty competing in an environment with heightened cost-consciousness. However, why not let the market forces work? Those indemnity plans that cannot effectively compete will not be selected by patients or offered by insurers. Moreover, allowing indemnity plans as an option will not increase the expenditures of employers or other sponsors.

We also question how a mandatory gatekeeper system can be implemented without adversely affecting quality and access—given our state's primary care physician shortage. While multiple efforts are underway to resolve the shortage, more needs to be done. In any event, the shortage is likely to continue until well into the twentieth century—even if all the necessary remedial measures begin now.

Eligible gatekeepers

Gatekeepers generally would be primary care physicians. A health care network would be permitted to designate a specialist physician as the gatekeeper for a chronically ill enrollee when the substitution would provide the enrollee with the most cost-effective care. Female enrollees could use a network gynecologist for their annual routine gynecological care without prior approval from a gatekeeper. We are pleased that the legislation appears to limit the eligible gatekeepers to physicians and would not permit a health care network to require an enrollee to go through a limited license practitioner to see a physician.

Note: While the legislation does not define "primary care physician," many HMOs define them as general and family physicians, general internists, and pediatricians.

We are concerned about the exclusion of obstetrician-gynecologists (ob-gyns) as eligible gatekeepers. Ob-gyns provide the only medical services received by many women—particularly women in their reproductive and menopausal years. All ob-gyns, even those that limit their practices to female reproductive and gynecological services, play an especially important role in early detection care and health education for women. They also provide care that is longitudinal and frequently maintain a woman's medical record for much of her life.

Reimbursement incentives

Health care networks would be required to incorporate "reasonable financial incentives to promote quality health care and contain costs" in the reimbursement arrangements for their network providers. We are opposed to this requirement. Many individuals prefer to make their own health care decisions in consultation with a physician who is not being provided financial incentives to limit their care—even if they must pay a higher premium to obtain unbiased advice. Moreover, inappropriate utilization can be controlled through a variety of alternative mechanisms such as utilization review, provider credentialing, and patient cost-sharing.

We are also concerned that similar language has been used by the Department of Health to require HMOs to pay gatekeepers only on a capitation basis. Again, fee-for-service payments combined with a bonus or holdback plan also can deter inappropriate utilization and should be an option.

Point-of-service option

Health care networks would be required to offer a "point-of-service" option that would allow enrollees to bypass their gatekeeper for specialty and other non-primary-care services from any network or out-of-network provider. Point-of-service options would be required to monitor the care provided under the option by precertification, utilization review, and managed care techniques approved by the Department of Health.

We support the requirement that health care networks be required to offer a point-of-service option. However, this option is not the equivalent of allowing patients to select indemnity or similar coverage that allows them free choice of provider.

Patients will still be required to use their gatekeeper for primary care services and will need to pay higher cost-sharing for using an out-of-network provider. In the addition, the costs of the point-of-service option's compliance with HMO regulatory requirements will be reflected in the premiums and could force them higher than those that would be charged by a true indemnity plan (not subjected to HMO-type regulation.)

The Society also objects to the mandated utilization review. Individuals should be free to select coverage without precertification requirements. Moreover, utilization review is only one of a number of ways that plans can effectively control utilization.

REFORM LEGISLATION EXPECTED TO PASS IN 1994

In a recent meeting with State Society leaders, policy staff members of the Casey administration said they are anticipating the passage of health system reform legislation in 1994. Discussion at the meeting focused on several key aspects of the Casey reform proposal.

The Casey staff clearly indicated that the administration would be willing to consider revisions to some sections of the proposed reform legislation, and they advised that it was not the intention of the administration to exclude a fee-for-service option. Since the governor's return to office, the momentum and push for his proposal have been heightened.

Other Society legislative efforts related to reform focus on self referral, equal access/mandatory participation, optometry therapeutic licensure, and scope of practice issues. The Society is particularly concerned about one measure, included in a series of rural health bills developed by Senator John Peterson (R-Venango), which would expand the nursing scope of practice to include prescriptive privileges.

For more detailed information on legislative issues related to health system reform, see page 20.

Health Care Summit Group

In related news, the Society continues to participate in a Health Care Summit Group of the Pennsylvania Business Roundtable, comprised of representatives of state health, insurance, and business organizations.

The group has developed a consensus document outlining general areas of agreement on health system reform, as well as delivery system, financing system, cost containment, and quality of care issues. The document was presented during testimony before House and Senate committees researching the reform issue.

AMA LAUNCHES CAMPAIGN TO PROTECT PATIENT CARE

The AMA on January 24 called on Congress to pass a health system reform bill that assures every American of universal coverage for a standard set of benefits, regardless of employment or economic status. As a centerpiece of this proposal, the AMA is launching a national grassroots campaign to urge Congress to protect patients and their doctors from the increasing domination of America's health care system by giant profit-seeking corporations.

AMA priorities include:

- universal health care coverage for every American;
- assuring that physicians, as advocates for their patients, play a significant role in deciding how health care is delivered and paid for;
- guarantees that all patients have a choice of health plans and physicians;
- medical liability reforms modeled after California's successful system;
- relief from antitrust laws that prohibit physicians from negotiating quality of care and conditions of patient coverage with insurance and hospital plans; and
- creation of a new public/private partnership to set and monitor national quality of care standards.

The AMA also repeated its support for a variety of approaches to universal health care coverage, including employer-required coverage, individually required and owned health insurance, and IRA-type medical savings accounts.

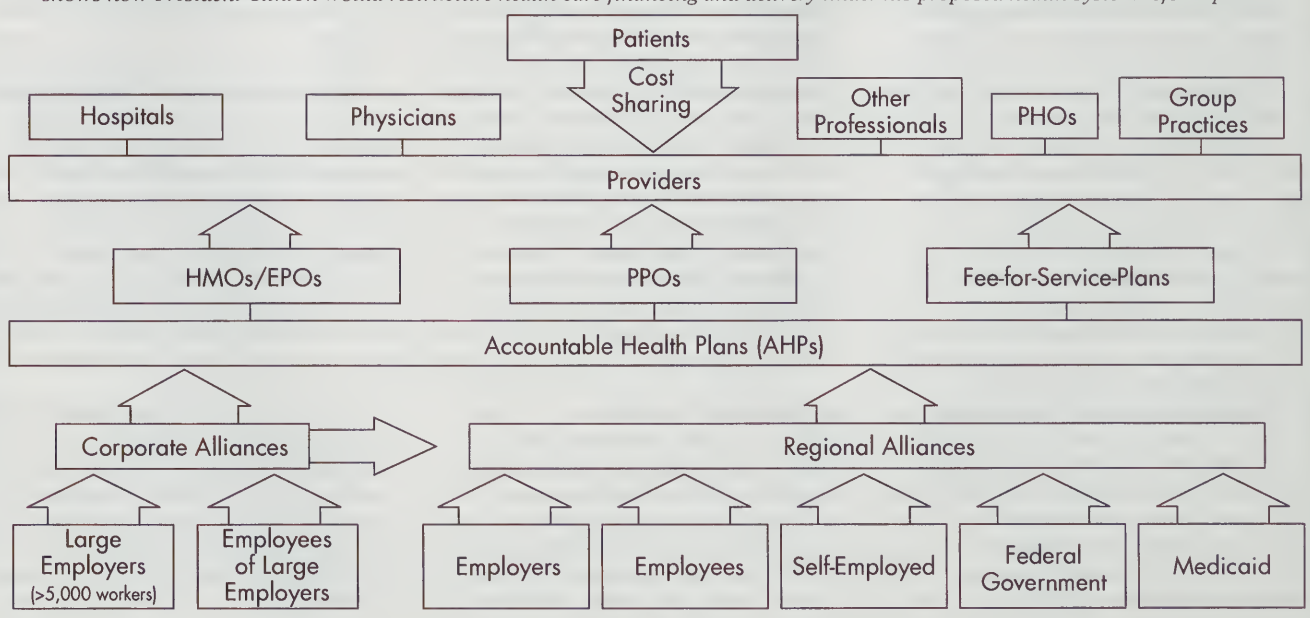
Call to Action

The State Society, in response to the AMA's patient care campaign, is encouraging doctors to: talk with their patients about health system reform, organize local forums on reform, contact their local media, and visit congressional representatives in their home districts.

To help you, the society has prepared talking point cards, brochures, and other materials. Call the communications division at (800) 228-7823 for details.

Health Care Financing and Delivery Under the Clinton Plan

This chart—developed by the Pennsylvania Medical Society as part of its response to the proposed Health Security Act—shows how President Clinton would restructure health care financing and delivery under his proposed health system reform plan.



The P·I·E Mutual has now entered the state of Pennsylvania. And whenever we come into a state good sense comes along, nonsense exits. Stability returns to the medical liability insurance market. In eight states 15,000 of our member-insured doctors have been enjoying the new cost climate. Protected by one of the largest medical professional liability monoline insurance companies in America. And defended by a firm of medically savvy litigators who close over 75% of cases without payment. And, year in and out, win nearly 80% of cases that go to trial.
For information, call 1-800-228-2335.

ACTIONS OF THE BOARD OF TRUSTEES, JANUARY 12, 1994

CONTACT WITH MEMBERSHIP IS NEW PROJECT'S GOAL

To enhance the State Society's visibility with grassroots members, the Board of Trustees at its January 12 meeting authorized a Society staff position "out in the field" as part of a five-year pilot project to be conducted in an area of the commonwealth with a high-density physician population. The new "membership representative" will visit physicians in their offices to address issues of interest to them.

The recommendation came from the Society's Task Force to Enhance Physician Involvement, formed early in 1993 to study the changing needs of Society members and the root causes for lack of physician participation in organized medicine. According to a task force report to the board, "While still in the early stages of deliberation, the task force has been convinced that one of the major problems the State Society has is a lack of visibility with rank and file physicians."

Though other state medical societies have field representatives to monitor the environment of medicine and listen to member concerns, the task force says the objective of the new position is similar to that of pharmaceutical firm representatives who are in constant contact with physicians in their sales areas. The membership representative would work at Society headquarters on an as-needed basis—to follow-up on field activities and attend key Society meetings—but would spend the majority of time meeting with current and prospective members.

This is the first in a series of recommendations to enhance member involvement expected this year from the task force. The Society is planning to fill the position within the next several weeks.

START-UP OF FOR-PROFIT SUBSIDIARY MOVING QUICKLY

The Society's project to develop managed care services and consultation capabilities continues to move on a fast track.

Initially, the for-profit subsidiary will include two primary components—a physician services component and a management services organization (MSO) component. One of the first responsibilities of the steering committee, appointed in October to guide the development and start-up of the Society's subsidiary, will be to determine which physician services currently provided through the Society's Council on Medical Practice should be transferred to the subsidiary. Also, the Society is working with KPMG Peat Marwick to develop a formal business plan for the MSO.

The Society will begin—through the MSO—to provide: technical assistance for physician network formation and managed care contracting; clinical protocols and outcomes measurement tools; and practice management services, including billing/collection services and group purchasing. Meanwhile, consulting services are available to physicians interested in network formation through the Society's consulting company.

The Society is currently researching potential governance structures for the for-profit subsidiary, developing a draft mission statement, and preparing draft corporate bylaws for steering committee review. The board is expected to consider further action at its meeting this month.

PROGRAM WILL EASE IMG LICENSURE OBSTACLES

At the recommendation of the Council on International Medical Graduates (IMGs), the board approved the establishment of an ombudsman program to assist Society member IMGs who encounter difficulties in obtaining a medical license in Pennsylvania. Informally, the Society's liaison with the State Board of Medicine has performed this function for several years.

The committee reported that it received correspondence from several IMGs who have had problems getting their licenses. For instance, delays often occur when applicants don't understand the requirements or options available to resolve deficiencies noted by the State Board. The committee believes other IMGs have faced similar problems but have not reported them.

Through the ombudsman program, the Society will continue to: 1) help member IMGs determine what documentation is needed or could be added to expedite the licensure process; and 2) act as a liaison for member IMGs experiencing difficulty in dealing with the State Board. The Society will also help nonmember IMGs who apply for membership.

For additional information about the ombudsman program, call the Society's Department of Education and Science at (800) 228-7823 or (717) 558-7750.

OTHER ACTIONS OF THE BOARD

In other action at its January meeting, the board:

- directed the Society to write a letter to Secretary of Health Allan S. Noonan, MD, expressing concern about some specifics of the Pennsylvania Department of Health's "Guidelines for Preventing the Transmission of Human Immunodeficiency Virus and Hepatitis B Virus from Infected Health Care Workers to Patients," released in October 1993;
- approved the recommendation of the Council on Medical

New Procedure Credentialing Protocol Approved for HMSS Use

In response to the efforts of the Society's Hospital Medical Staff Section (HMSS) Governing Council, the board approved "New Procedure Credentialing Protocol" for Pennsylvania hospital medical staff use. The document, mailed to HMSS representatives and medical staff presidents of unrepresented hospitals in late January, defines "new procedure" and suggests criteria for credentialing a new procedure. For more information, or to receive a free copy of the document, call the Society's Department of Medical Staff Relations at (800) 228-7823 or (717) 558-7750.

Economics that the Society establish a Pennsylvania Relative Value Update Committee to provide Pennsylvania Blue Shield with physician input into the development of relative value units (RVUs) for various Blue Shield networks which use a relative value scale (e.g., PremierBlue); and

• agreed to support the recommendation of the Joint Data Committee of the Society, the Hospital Association of Pennsylvania, and the Pennsylvania Osteopathic Medical Association that the next Pennsylvania Health Care Cost Containment Council (PHC4) physician-specific report be on acute myocardial infarction.

CORRECTION

In *Annual Meeting* coverage of the December issue of PENNSYLVANIA MEDICINE (page 20), a portion of the Society's self-referral policy was incorrectly reported. The correct language is:

*Physicians should not refer patients to off-site facilities in which the physicians have an investment interest unless: 1) they **directly** provide care or services in the facility; or 2) there is a demonstrated community need for the facility, and alternative financing is not available.*

How To Get Involved in 1994 Election Campaigns

Political participation is both a freedom guaranteed by the laws of our nation and state, and an incredibly effective means of guaranteeing that your views will be heard when your successful candidate is elected to office. The 1994 elections offer a tremendous opportunity for physicians and their spouses to get involved in a campaign—as a financial contributor or as a campaign worker. You are especially encouraged to consider "getting involved" in a statewide campaign of a candidate for governor or U.S. Senator. Below is a current list of candidates for governor and U.S. Senate, along with a short biography of each and how to contact their campaign offices or physicians already involved in the campaign. For additional information about what role you can play in this year's elections, call the Society's Division of Governmental Affairs at (800) 228-7823 or (717) 558-7750.

CANDIDATES FOR GOVERNOR

Dwight Evans (D)
Serving fourth term in the state House; represents 203rd District, Northwest Philadelphia; priority issues have included child care and child welfare. *Contact:* Friends of Dwight Evans, P.O. Box 19097, Philadelphia 19138, (215) 548-8054.

Mike Fisher (R)
Serving fourth term in the state Senate; represents 37th District, including Pittsburgh's South Hills and part of Washington County; former member of the House of Representatives. *Contact:* Fisher '94 Committee, 12th Floor, Two Chatham Center, Pittsburgh 15219-9795, (412) 288-2227; or Robert Carroll, MD, at (412) 367-1188.

Sam Katz (R)
Independent businessman and fiscal expert; former member of Philadelphia Board of Education; sought 1991 Republican nomination for mayor of Philadelphia; proposes to reduce the size and cost of government. *Contact:* Friends of Sam Katz Committee, One Penn Center, Suite 1360, 1617 JFK Boulevard, Philadelphia 19103, (215) 569-1994; or Robert Sataloff, MD, (215) 545-3322.

Robert O'Donnell (D)
Former speaker of the state House; represented 198th District, Northwest Philadelphia, since 1974; priority issues include creating jobs, improving schools, and combatting crime. *Contact:* O'Donnell for Governor Committee, 1617 JFK Boulevard, Suite 1930A, Philadelphia 19103, (215) 567-3341.

Ernie Preate Jr.(R)
Serving second term as attorney general; worked to enact new drug laws, expand local municipal drug task forces, develop better consumer laws, and reform lobbying laws; veteran. *Contact:* Ernie Preate for Governor Committee, 128 Walnut Street, Harrisburg 17101, (717) 234-1994.

Tom Ridge (R)
Serving fifth term in Congress; represents 21st Congressional District; campaign focusing on making Pennsylvania "job friendly," restoring the state's business climate; veteran. *Contact:* Tom Ridge for Governor Committee, P.O. Box 11667, Harrisburg 17108, (717) 231-1632; or Charles D. Hummer Jr., MD, (610) 876-0347.

Mark Singel (D)
Serving second term as lieutenant governor; former state senator representing 35th District, including Cambria and Clearfield counties. *Contact:* Friends of Mark Singel Committee, P.O. Box 11624, Harrisburg 17109, (717) 238-1995; or Victor F. Greco, MD, (717) 788-3225.

Charles Volpe (D)
Attorney and insurance executive; son of late Representative Charles J. Volpe Sr.; active in workers' compensation reform; strong advocate for stricter sentencing guidelines involving violent juvenile crime. *Contact:* Volpe for Governor Committee, P.O. Box 9663, Pittsburgh 15226, (412) 344-8683.

Lynn Yeakel (D)
Won Democratic primary in 1992 for U.S. Senate seat, but lost in close race against incument Republican Arlen Specter; has shown interest in public health issues. *Contact:* Lynn Yeakel for Governor Committee, 1617 JFK Boulevard, Suite 1665, Philadelphia 19103, (215) 557-2500.

*State Treasurer **Catherine Baker Knoll** at one time said she would not run for governor, but just prior to press time, she announced her candidacy. Keep an eye out for further details.*

CANDIDATES FOR U.S. SENATE

Rick Santorum (R)
Serving second term in Congress; represents 18st Congressional District, campaign focusing on health care, welfare reform, and budgetary issues. *Contact:* Santorum '94 Committee, 340 East Main Street, Carnegie 15106, (412) 882-3205; or Robert Carroll, MD, at (412) 367-1188.

Harris Wofford (D)
Elected to Senate in 1991 special election to replace the late Senator John Heinz; reelected in 1992 on health system reform platform. *Contact:* Citizens for Senator Wofford, 1420 Walnut Street, Suite 808, Philadelphia 19102, (215) 731-1944.

MEDICAL LIABILITY REMAINS VITAL IN REFORM DEBATE

Medical liability reform continues to be an issue of discussion whenever health system reform is debated. As a result, a number of legislative proposals addressing medical liability reform have been introduced in both the Pennsylvania Senate and House of Representatives:

- Senate Bill 1199—Senator Hardy Williams (D-Philadelphia) introduced this arbitration panel bill as part of the governor's five-bill reform package.
- Senate Bill 1173—Senator D. Michael Fisher (R-Allegheny) introduced this comprehensive bill, which contains several measures outlined in the Society's health system reform proposal, such as defining the terms "informed consent" and "expert," determining a statute of limitations, and allowing punitive damages only for "outrageous conduct with evil motive."
- House Bills, 563, 1495, and 1496—Representative Leo Trich (D-Washington) introduced this series of bills. House Bill 563 establishes a practice parameter system, based on the existing law in Maine; House Bill 1495 calls for periodic payments of awards; and House Bill 1496 seeks to limit non-economic losses.
- House Bill 1529—Representative Al Masland (R-Cumberland) introduced this measure that would limit attorney contingent fees.
- Senate Bill 1026—Senator William Stewart (D-Cambria) introduced this bill to limit damage awards.
- Senate Bill 1034—Senator Michael Dawida (D-Allegheny) introduced this bill, also to limit punitive damage awards.

To date, these bills have failed to receive any committee consideration. However, provisions contained within these measures may be considered as potential components of any forthcoming health system reform proposals.

Society lobbyists have led efforts to derail two bills that would have placed a financial assessment on health care "providers" to pay for reconciliation panels set up by the courts in 36 counties. The first measure, House Bill 1959, was defeated by the House Insurance Committee by a 10-7 margin. A comparable bill, Senate Bill 1016, was defeated twice by the full Senate in June 1993.

Although the language found in House Bill 1959 allowed for fees to be established after enactment, Senate Bill 1016 mandated that the fees would be identical to those that had been suspended when the panels were operating with surplus funds—for example, $25 for physicians and podiatrists, and as much as $500 per hospital.

Recognizing these bills are directly related to the budget process, it is very likely that they will receive consideration early this year. The Society continues to oppose these bills.

Society staff continue to meet with key legislators and representatives from business, insurance, and the health care industry, to discuss the Society's position on medical liability reform and its importance in the health system reform debate.

SENATOR PROMISES ACTION ON HEALTH SYSTEM REFORM

Senator Hardy Williams (D-Philadelphia), in a news conference early this year, announced what he called "a new year's resolution of promised action" on health system reform in Pennsylvania. He said he intends to report out for final Senate action a series of health care "infrastructure" bills and an "HMO any willing provider" bill.

According to the senator, the bills will include provisions to: create an Office of Health Insurance Consumer Advocate; develop incentives for physicians to enter family practice as a specialty; broaden the scope of services performed by nurses, physician assistants, and certified nurse midwives; establish statutory practice parameters for physicians and other practitioners; and organize tighter security surrounding medical records to protect computerized medical histories.

Senator Williams expected to move the bills out of the Senate Public Health and Welfare Committee early last month for consideration of the full Senate this month. At press time, the Society was reviewing all of the legislation and preparing to have amendments offered that are consistent with Society policy.

In related news, the Society participated in a February 23 debate on tort reform coordinated by Senator Williams. The senator is also sponsoring a series of health system reform "summits" in each of the eight regions of Pennsylvania identified in the governor's reform proposal. The summits will continue through June.

For more information on Society efforts related to health system reform, see page 16.

APRIL SEMINAR TO DISCUSS SKILLS TO IMPACT ELECTION

Among several events scheduled in conjunction with the Society's 1994 Spring Assembly is "Practicing Politics," a full-day seminar on April 18 at the Harrisburg Hilton and Towers.

Nationally recognized speaker Michael Dunn will present "political skills you need to have an impact on the 1994 election." Sponsored by the American Medical Political Action Committee (AMPAC) and the Pennsylvania Medical Political Action Committee (PAMPAC), the seminar will also include a legislative issues briefing and personal visits with state legislators at the Capitol.

The seminar is open to all State Society and Alliance members. A $15 fee is being charged to cover the cost of lunch. For more information or to register, call the PAMPAC office at (717) 558-7822 or the State Society at (800) 228-7823. *Register now—space is limited.*

Also, for more information about the Society's Spring Assembly, see pages 42-43.

Vice Speaker Considers Realities of '90s Medicine

Maria T. Montesano
Assistant Managing Editor

Next month: Look for a profile of newly elected young physician trustee John R. Martell Jr., MD.

This first in a series of interviews with Society board members newly elected at the annual business meeting in October profiles Donald H. Smith, MD, vice speaker of the State Society's House of Delegates.

Dr. Smith

His face and voice are sure to be familiar to members of the State Society's House of Delegates—he's had a reserved seat with the Northampton County delegation since the early 1980s. He's faced the delegates many times, voicing what he believes is best for patients, physicians, and medicine. Seeing him in action, you couldn't call him shy. But this year his role will change. This year Donald H. Smith, MD, will have a new seat at the annual meeting—on the stage, facing the same House that elected him its vice speaker last October.

Dr. Smith is what you might call a born leader. He graduated at the top of his Williamsport High School class and was involved in several leadership activities. Though a run for president of his undergraduate class at Lehigh University was unsuccessful, he continued to lead activities for his fraternity and participate in athletics throughout college. But, he says, by the time he got to medical school, he was married and raising three children, and he wasn't involved at all. "That spilled over into my first several years of practice," Dr. Smith says.

Medical school was at Jefferson Medical College, a decision that made his father very happy. "My father was a Jefferson graduate," Dr. Smith says, "and it pleased him very, very much that I would follow in his footsteps." (For the record, J. Stanley Smith, MD, a dermatologist, served his county society well, including as president.)

Dr. Smith completed his internship and residency in general surgery at Lankenau Hospital, and has held his position in the Department of General and Oncological Surgery at Easton Hospital since 1970. He also serves as a consultant to St. Luke's Hospital, Bethlehem, and as an assistant clinical professor of surgery at Hahnemann Medical School, Philadelphia.

He joined the State Society in June 1970, but his involvement was gradual. His first effort on behalf of state physicians was in the mid-70s when he was asked to testify in Philadelphia at combined hearings of the House Judiciary and Health Insurance committees on medical liability insurance.

Dr. Smith says, "At about the same time, I got very upset with the reimbursement mechanism. I felt the payments physicians were receiving were inequitable, and the method of paying physicians was unfair. So, I wrote a letter to the Society and asked if I could be appointed to the council that dealt with this." He was appointed to the Council on Medical Economics in 1977 and served for six years. His involvement was recognized at the county level, and by 1979 he found himself president of the Northampton County Medical Society. He says, "I've been involved in various levels of medical politics ever since."

At the State Society, he has served as a member of the Council on Education and Science, and the Public Relations and Long-Range Assessment committees, and he has held leadership positions at the Pennsylvania Medical Society Liability Insurance Company and the Keystone Peer Review Organization. He currently is a member of the Society's Task Force on Health System Reform and has been involved with the Pennsylvania Delegation to the AMA since 1985, most recently serving as vice chair.

But his main interest is the House of Delegates. "From my first House meeting, I've enjoyed the responsibility and workings of the House, and I've become good friends with the House leadership," Dr. Smith says. His work chairing three reference committees and as a member of the

House's Credentials Committee has honed his interest.

"The House leaders were kind enough to ask me to chair several of the reference committees, and I became interested in the House actions. I was constantly trying to get some minor changes made to expedite the business of the House; some of my new ideas and thoughts were accepted and some were not, [and] I guess it was after being there for several years that I became interested in joining the leadership of the House. It seemed almost like a natural extension of my activities to try to be a leader of the House rather than just one of the participants."

Another responsibility of vice speaker is as a voting member of the Society's Board of Trustees. Although he says being a board member "has not been a major goal," he admits an interest in making some changes and representing the House at the board level. "There may certainly be times when issues arise where I personally don't agree with the House action," he says, "but it's my duty, along with the speaker of the house [Howard A. Richter, MD], to represent the delegates and their decisions. I think we both take that duty very seriously."

Serving as patient advocate is another duty for all members of organized medicine, according to Dr. Smith. Of the State Society and the AMA he says, "An organization of physicians is a bit unusual, because many of the responsibilities that physicians take on are not necessarily self-serving, in spite of what outsiders believe. The truth of the matter is that much of our work is done on behalf of our patients, and we take our responsibilities as advocates very seriously."

On the issue of health system reform, for instance, he believes the Society and the AMA must first certify that they are "organizations that really understand the issues and are prepared to offer decent and reasonable options." He says, "If you have the credibility, the individuals who want to know your particular perspective should come to you, rather than you forcing it down their throats. As you well know, in health system reform there has been a great deal of exclusion of the medical profession. I believe that exclusion is occurring because the policy makers don't think we are patient advocates. Instead, they think we are a self-serving, socioeconomic, lobbying group. Until we are perceived as something other than that, we're going to have a significant problem participating in the debate at a sensible level."

He says any position defending the rights of physicians for their socioeconomic welfare "must be secondary to the altruistic efforts that we want to make in true health system reform—that is, providing quality care to all the people and not having them excluded or by-passed in the system."

He believes the current American health care system has many good points and says, "To simply scrap all the good things about the system because there are some bad things is wrong." Instead, he believes reform efforts should focus on the "broken" aspects of the current system, such as access issues, unnecessary administrative burdens, medical liability (tort) problems, and tax law inequalities.

Though he is passionate about all four issues, he is most concerned about tort reform: "I said years ago, before health system reform was proposed, that there would eventually be a negotiation between the federal government and physicians in which they would trade a meaningful tort reform package for something that the doctors wanted. But now it looks like it's going to be a negotiation with the government offering reasonable and, perhaps, rather comprehensive tort reform for us in return for our acceptance of a health system reform package that we may not like. On that issue, we'll have to sit down, look at the details, and decide if we're willing to give up certain things for that kind of reform."

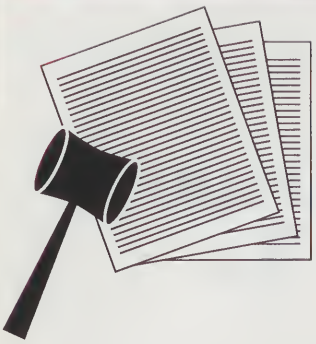
Overall, he advocates "individual mandate," where individuals would be mandated to have insurance: "They could buy it themselves, negotiate it as an employee benefit, or negotiate some combination of the two." Further, the poor and the indigent would be provided with a voucher system which, he says, would help the access problem, as well as control overutilization of services.

The health system reform debate includes many examples of how the problems of medicine are becoming more socioeconomic, according to Dr. Smith. "When I first became involved in the Society, we addressed the issues of professionalism and utilization and quality assurance. Today those things seem to be secondary to socioeconomic issues. We're all trying to make some reasonable suggestions on those issues, but I think in time we'll get back to the other, non-socioeconomic issues."

For instance, he believes that once organized medicine gets past health system reform, its next major obstacle to hurdle will be quality—how to define it and how to maintain it. He quickly adds, "It's important to get back to those issues." ⬡

"To simply scrap all the good things about the [health] system because there are some bad things is wrong."

—Donald H. Smith, MD



STATE SOCIETY SUPPORTS YOUR INTERESTS IN COURT

Legal Cases, 1983-93, Summarized for Members

From time to time, the State Society's Office of General Counsel has been asked about the Society's litigation history, such as what cases the Society has undertaken in the past and what issues have been involved. In August 1993, the Society's Board of Trustees asked the office to provide a study of the Society's litigation program over the past 10 years. The completed report was presented to the board at its January 1994 meeting.

At the request of the board, the results of the study are presented below to educate members about the Society's litigation program. Most members may not be aware of the Society's degree of involvement in the types of issues important to the practice of medicine in Pennsylvania.

The descriptive information following the case name includes whether the case is or was original litigation—that is, filed by the Society against another party—or an *amicus* case. The Society acts as an *amicus curiae,* or "friend of the court," when it is involved to educate the court about a particular point of law of great importance to the practice of medicine.

The descriptive information below also shows the time period in which the case was active, the issue involved, and the outcome of the case. The Society has dedicated more than $250,000 to litigation of these cases.

For further information, contact Susan M. Weber, Esquire, assistant general counsel, at Society headquarters.

Key
Case Name *(Asterisk indicates PMSLIC financial support)*
(Amicus or Litigation/Time Period)
Issue. *Case Outcome.*

Product Liability/Breast Implant Litigation*
(Amicus/July 1993-)
Should strict product liability allegations against physicians be allowed to go forward in over 200 lawsuits filed in Pennsylvania with respect to side effects caused by silicone breast implants? *Issue decided in favor of physicians, but appeal of issue in abeyance while awaiting court reconsideration of other issues.*

Boettcher v. King* *(Amicus/April 1993-)*
Who, if anyone, is liable for payment of post-judgment interest in CAT Fund case? *Pending.*

Pennsylvania Radiological Society v. Blue Shield
(Amicus/April 1993-)
1) Must HCFA pay an increased amount to certain physician specialists who were grossly underpaid for Medicare claims between 1984-86 when their compensation arrangements changed? Blue Shield, Medigap insurer, refused to pay, citing statute of limitations as a bar.
2) Must physicians file claims individually in order to receive payment, or is Blue Shield required to automatically pay them? *Pending—State Society waiting for appropriate time to file amicus brief.*

Beaver County Tax Appeal
(Litigation/March 1993-February 1994)
County society applied for a Section 501(c)(6) federal tax exemption and was denied on grounds its physician referral service is an impermissible activity for a tax-exempt organization. *Won—Federal tax exemption granted February 7, 1994.*

In re: Daniel Joseph Fiori *(Amicus/March 1993-)*
Discontinuance by a surrogate of life-sustaining medical treatment (artificial nutrition and hydration) of a patient in a persistent vegetative state without hope of recovery when the patient had no advance directive. *Pending—Brief filed May 1993; Superior Court remanded case for determination of patient's best interests, based on clear and convincing evidence standard. Reconsideration en banc granted. Awaiting hearing.*

Singer v. Player *(Amicus/March 1993-)*
Level of protection given mandatory reporting of child abuse. Amicus brief of State Society et al. supported neither party; supported immunity from liability for mandated reporters of suspected child abuse. *Superior Court ruled (in part) against mandated reporting on technical grounds.*

Hankinson v. Torrance State Hospital
(Amicus/October 1992-February 1993)
Discoverability and protection of peer review documents. *Protection from discoverability was waived in this case by actions of those seeking protection.*

In re: Application of Milton Hershey Medical Center of The Pennsylvania State University, and In re: Application of Harrisburg Hospital v. John Doe, MD
(Amicus/September 1992-November 1993)
Notification of patients of physician's HIV-positive status. *Lost—Pennsylvania Supreme Court held that hospital had met its burden of demonstrating compelling need to disclose status.*

Wu v. Spence* *(Amicus/September 1992-)*
Informed consent—Trial Court and Superior Court declined to expand informed consent requirement beyond surgical procedures to administration of drugs. *Pending—Awaiting Pennsylvania Supreme Court grant or denial of allocatur; amicus brief will be filed at appropriate time after allocatur is granted.*

Pennsylvania Bar Association v. Commonwealth of PA
(Amicus, not filed/May 1992-December 1992)
Chapter 18 of Act 6—violation of insureds' procedural and substantive due process rights. *Won—In late 1992, Pennsylvania legislature passed omnibus bill amending and repealing disputed statute sections.*

State Society v. Snider *(Litigation/March 1992-)*
Whether reimbursement policy violates physicians' rights to reimbursement under the Medicare Fee Schedule for treating Medicare patients. *Pending—State Society has appealed District Court opinion to 3rd Circuit Court of Appeals. Resolution expected in Spring 1994.*

Wolgemuth and Henry, et al. v.
Hershey Medical Center and Harrisburg Hospital
(Amicus/February 1992-)
Trial Court's opinion is that hospitals have a duty to patients to inform them of a resident physician's HIV status.

Pending—Court denied class certification. Decision appealed by plaintiffs.

Nazay v. Miller, et al.
(Amicus/September 1991-December 1992)
Dispute between employer and employee over ERISA payment of medical benefits. *State Society decided against filing an amicus brief, estimating likelihood of success to be very poor.*

Samuel S. Lyness, MD, v. Commonwealth of PA
(Amicus/November 1990-April 1992)
Does the admitted commingling of prosecutorial and judicial functions in the multi-member State Board of Medicine violate due process standards? *Won.*

State Society, AMA, et al. vs. Casey, State Board of Medicine, et al. (MOM case)
(Litigation/July 1990-December 1991)
Can a state enact a law which conflicts with federal law? (Re: House Bill 700 (Act 90-81)—Balance billing prohibition). *Lost.*

Stenger v. Lehigh Valley Hospital Center*
(Amicus/July 1990-June 1992)
Pennsylvania Supreme Court affirmed Superior Court's decision to subject volunteer blood donors to "anonymous" discovery in negligent screening suits. *Partial win, partial loss.*

Levine v. Rosen* *(Amicus/July 1990-December 1992)*
Malpractice case—Whether Superior Court panel erred in reversing Trial Court's accurate supplemental instruction to the irrelevant considerations charge that disclosed the malpractice payment reporting requirement of federal law. *Lost.*

State Society v. Foster
(Litigation/February 1990-April 1993)
Do billing prohibitions of the cost containment provisions of the Auto Insurance Act amendments violate physicians' due process rights? Is Insurance Department's interpretation of Act 6 with respect to application of the 110 percent of Medicare limitation on fees inconsistent with the language of the Act and intent of the legislature? *Lost—In April 1993, State Society Board of Trustees decided not to appeal Court's decision.*

DiMarco v. Lynch Homes, et al.
(Amicus/January 1990-January 1991)
Medical malpractice—Whether a physician is liable to a third party where physician failed to properly advise patient exposed to communicable disease and patient, relying upon physician's advice, spread disease to third party. *Lost.*

Gouse v. Cassell* *(Amicus/January 1990-December 1992)*
Medical malpractice—Whether a physician can be held liable for lack of informed consent even when patient would have consented to the procedure had the omitted information been provided. *Lost.*

Jyotindra T. Shah, MD, v. State Board of Medicine
(Amicus/December 1989-April 1992)
Due process—Doctor's temporary suspension by State Board of Medicine was imposed under procedures and circumstances violating due process. *Won.*

Tominello v. Janeway*
(Amicus/September 1989-January 1991)
Whether a medical malpractice plaintiff may enforce against a defendant physician the portion of a judgment covered by the CAT Fund. *Won.*

Doe v. Dyer-Goode *(Amicus/May 1989-November 1990)*
Unauthorized HIV testing of patient's blood by physician. *Won.*

State Society v. Pennsylvania Insurance Department and CAT Fund
(Litigation/December 1988-February 1989)
CAT Fund surcharge premium determination in violation of Section 701(e)(1) of the Health Care Services Malpractice Act. *Won.*

Hatter v. Landsberg*
(Amicus/September 1988-August 1989)
Physician's immunity against wrongful birth actions—construction of legislature's intent of statute. *Won.*

Makara v. Peguero*
(Amicus/September 1988-March 1989)
Whether a defendant physician can be compelled by a plaintiff to provide expert testimony. *Lost—State Society was denied permission to appeal.*

Commonwealth of PA v. Lurie
(Amicus/May 1988-February 1990)
Commonwealth's position criminalizing unintentional billing errors is not supported by the Medicaid Fraud statute and is inconsistent with the continued success of the Medicaid program. *Won.*

Purcell v. Bryn Mawr Hospital, et al.*
(Amicus/May 1988-late 1990)
Venue question. *Won.*

Ervin v. Knee* *(Amicus/January 1988-May 1989)*
Does a physician who performs an examination for an insurer owe a duty of care to the patient? *Won.*

Sagala v. Tavares*
(Amicus/November 1987-late 1989)
To prevail in an informed consent case, must plaintiff show causation, i.e., that if he had known of the risks, he would not have consented to procedure? *Lost.*

State Society v. Commonwealth of PA, State Board of Medicine *(Litigation/May 1987-October 1988)*
Constitutionality of regulation promulgated by State Board of Medicine imposing limitations on the use of sympathomimetic amines. *Won.*

Sanderson v. Bryan* *(Amicus/July 1985-March 1988)*
Are confidentiality protections of Pennsylvania Peer Review Protection Act limited solely to information concerning patient who brings the action? *Won.*

Pennsylvania Blue Shield v. Commonwealth of PA Department of Health
(Amicus/May 1984-January 1986)
l) Does the Department of Health have statutory authority to order Pennsylvania Blue Shield to revise its regulations for particular doctors and to compel compliance with approved regulations?
2) Is Department of Health's order that Pennsylvania Blue Shield implement fair and adequate procedures and practices in respect to assignment of accounts, fees and payments, and determination of overpayment disputes a proper exercise of its statutory authority? *Partial win; partial loss.*

Cancer crosses all cultures and all nationalities without exception. So it stands to reason that the treatment and eventual cure of a condition experienced worldwide would require talent and intellect from around the globe.

That's why the planners of The Arthur G. James Cancer Hospital and Research Institute, a National Cancer Institute designated Comprehensive Cancer Center, set out to staff this promising medical center with the top researchers in their field, wherever they might be found. Their search resulted in a respected team of renowned specialists from all around the world.

However, this search would never have been successful without a highly attractive institution. Designed to provide the optimum environment for the development and application of effective cancer treatments, The James house remarkable research facilitie within the same building as a equally excellent treatment cer ter. Because the organization'

Building Legacies to Medicine

Maria T. Montesano
Assistant Managing Editor

For the past 34 years, LeRoy Erickson has served the State Society in a number of positions, most recently—and most notably—as executive director of The Scientific and Educational Trust. Prior to his retirement at the end of February, LeRoy talked to PENNSYLVANIA MEDICINE about his experiences and accomplishments at the Society, a history of building legacies to medicine.

Just recently, I heard the results of a survey asking people over 95 years old what they would do differently if they had their lives to live over again. Though I admit the answers are hearsay, they seem logical: Some respondents said they would risk more, and others would "take more time to smell the flowers." But overwhelmingly, people just hope to "leave something that's lasting." LeRoy Erickson, retiring executive director of the State Society's Educational and Scientific Trust, just may have done that here in Harrisburg. In his 12 years at the Trust, LeRoy has worked to help more that 1,000 medical students via the Trust's student loan program, several new programs have been added, total assets have more than doubled, and contributions rose to almost a quarter of a million dollars last year alone.

Growing up in Erie

LeRoy fondly reminisces about his childhood in Erie. His father was a glass cutter and businessman, known for his entrepreneurial nature, and his mother worked hard as a housewife and mother of two. LeRoy was active in high school on the stage crew, taking photographs, and as a member of the swim and water polo teams.

LeRoy Erickson

He graduated high school in 1948 and worked six months before heading to Kent State University in Ohio, where he studied business administration. He again was active as a cheerleader and a member of the university's championship gymnastic team.

Following college graduation, LeRoy fulfilled his ROTC duties in the U.S. Army and then returned to Erie, where he got his first job out of school, and was married to Marianne Douds.

The move to Harrisburg

LeRoy came to the Society in 1960 from the Erie County Health and Tuberculosis Association. He had been with the organization for five years, and tells the story of how Carl B. Lechner, MD—an Erie radiologist who, at that time, was a board member of the TB association and medical editor of PENNSYLVANIA MEDICINE, then known as the *Pennsylvania Medical Journal*—first suggested the move.

"Dr. Lechner called me and said, 'Can you come right over to my office?'" LeRoy recounts. "I went over, and there he was, sitting with these red goggles on and his feet propped up on the desk. He said to me, 'I want you to go the Harrisburg. You're the kind of guy we need there. I'll set it up, you get an interview, and that's it.'"

"Harrisburg" meant the State Society, and LeRoy was to call Society staffer John Rineman, then working in public relations. But before LeRoy got the chance to call Rineman, Rineman called him. LeRoy started at the Society on February 1, 1960, as secretary to the Council on Public Service.

At that time, he says, the Society was small but growing. "We would look at membership problems

and the office operation, and we would try to unwind these things and put them back together," he recalls. After a year, he was made Scientific Assembly and Convention manager, and in another year, was promoted to business manager—the Society's first. He stayed in that position for five years, before taking over in 1967 as director of educational affairs.

Among the many national reforms instituted during LeRoy's early years at the Society were Medicare and formal continuing education credits. Though he was unaware of it along the way, his experiences from dealing with the complexity of these and other issues turned out to be stepping stones to his position at the Trust.

The Society's Trust

The Pennsylvania Medical Society's Educational and Scientific Trust was established in 1954 "to serve medicine through charitable, educational, and scientific activities." Its focus back then was public health, and monies were available through a charitable grant (see "History...," below).

But by 1982 things had changed, LeRoy recalls. "The Trust didn't have a lot going on, except for the student loan program. It needed money and didn't have money, and it was thought that something was needed to get the whole program going." That something turned out to be a someone, and that someone was LeRoy.

He had been involved in educational and scientific activities for 14 years, and the leadership at the Society believed LeRoy was their man. John Rineman, who was promoted to executive vice president in 1969, recalls, "LeRoy's personality and characteristics had proved beneficial to the Society, and I believed if anyone could turn the Trust around, it would be LeRoy. It was a new challenge for him."

Abram M. Hostetter, MD, chairman of the Trust, adds, "LeRoy has always been an idea man, reading and connecting what he reads to his other endeavors...One of his greatest strengths has always been that he sees possibilities others don't see."

LeRoy says his own entrepreneurial spirit, which he thinks was inherited from his father, may have helped land him the job, as well. "Under a foundation like this, you have to be entrepreneurial—you have to raise money, get it flowing in. Then you take it and put it back out in some form—loans, grants, programs—as a service to medicine."

In 1982, the Trust was fulfilling its mission solely through its student loan program. By the '90s, however, it was offering much more, including:

- marketing and research projects on health care issues;
- a medical benevolence program, which aids members or immediate families of deceased members who are in financial distress, or provides funds for other charitable uses;
- the Physicians' Health Program (PHP), which promotes the personal and professional well-being of physicians;
- The Institute for Physician Leadership, which seeks to teach physicians leadership and organizational skills to help them adapt to the changing medical environment;
- the Pennsylvania Diabetes Academy, which provides diabetes education to professionals in Pennsylvania; and
- Keystones in Public Health, which addresses public health issues in the commonwealth.

And while the success of the Trust under LeRoy's direction is evident by its program growth, the numbers don't look too bad either: When LeRoy started with the Trust, the annual budget was $80,000, assets totaled $3 million, and there were two employees. Today, the Trust has a budget totaling about $1.5 million, assets of $8.2 million, and 19 employees. Further, in 1993, contributions to the Trust totaled $226,467.

LeRoy credits the success of the organization to the support of the Trust's board and its ability to "gamble a little bit" throughout the years, a staff of "really good people," and the overall nature of the Trust.

Others, however, credit much of the Trust's success to LeRoy—to his intelligence and energy and persistence and ag-

THE EDUCATIONAL & SCIENTIFIC TRUST
of the Pennsylvania Medical Society

History of the Trust

The Educational and Scientific Trust was founded by the Board of Trustees of the Pennsylvania Medical Society in 1954 through a grant provided by the A.W. Mellon Educational and Charitable Trust. The Trust was established to serve medicine through charitable, educational, and scientific activities.

While the Trust's initial focus was on public health issues, over the years it has expanded its services to address a broad spectrum of needs in the medical arena. Currently, it offers low-interest loans to medical students, administers the Physicians' Health Programs and The Institute for Physician Leadership, and conducts marketing research on health care issues.

In 1992, the board took action to renew the Trust's commitment to public health by creating "Keystones in Public Health" to promote good health in Pennsylvania through education, networking activities, and coalition building (see article, pages 32-33). The Trust of today remains dedicated to serving the needs of medicine.

gressiveness, his creativity and sensitivity and vision and drive. George Miaoulis, PhD, a long-time consultant to the Trust and long-time friend of LeRoy's, says LeRoy "is a diamond...truly one of the great leaders in the field of medicine, and a role model for all of us."

Being a somewhat modest man, LeRoy offers another possibility for the Trust's success: "I don't know for sure, but maybe someone's been watching over us."

Building legacies

LeRoy's official last day in the office was February 28. He spent his last month at the Society working with new Trust Executive Director Matt Tornambe (see "Moving On," below), and generally just being his usual cheerful self. And why not? He has a lot to be proud of.

When I ask him to talk about his greatest accomplishment, the talk turns to leaving something behind. "Building legacies to medicine—that's the greatest accomplishment." He explains, "The Trust leaves something that is lasting for medical professionals. It carries on a legacy. And I was a part of building that legacy. It doesn't have to have my name on it, but I've got the satisfaction of knowing we've got something in place that is lasting."

In the future, LeRoy is planning to do some consulting, maybe with the Trust; travel; teach; and continue his involvement with safety issues, especially for cyclists—being an avid cyclist himself. He's taken some risks throughout the years and certainly has left something lasting, but LeRoy assures us that in his retirement, he will be stopping along the way to smell the roses.

Moving On

On February 1, 1994, Matthew J. Tornambe joined the Trust, succeeding LeRoy Erickson as executive director. A graduate of Penn State, Matt comes to the Trust from the National Multiple Sclerosis Society in Harrisburg, where he was executive director for 10 years. According to Trust Chairman Abram M. Hostetter, MD, Matt was chosen for the Trust position because he had "ample experience in administration at a nonprofit health organization," and strong references about his work habits and manner.

Matt and LeRoy spent the month of February working together. "It's been great to work right along side of him," Matt says. "Because of what LeRoy has done with the Trust, we can now get back to the original intent of public health issues. I am very excited about that." He adds, "It is unique that a transition like this could go so smoothly. That will certainly benefit the Trust."

Matt says he realizes that he has very big shoes to fill—"because of LeRoy's energy and dedication." But he's encouraged to see parallels between LeRoy and himself. It is those parallels, he says, that give him "a very good chance of picking up where LeRoy left off and moving the Trust positively into the future."

LeRoy sees those parallels as well. "Our backgrounds are similar," he says, "and I see a lot of the same traits in him as I see in myself. It takes a certain spirit or drive to make the Trust work, and I am comfortable that Matt will serve the Trust well."

After two weeks on the job, Matt said, "Things are going great, and I'm learning a lot...The Trust is in a unique position to carry on its medical legacy of philanthropy, [and] because of the strong physician commitment, I am optimistic about my future here."

Ways to Support the Trust

The Trust gives physicians and others interested in medicine the opportunity to contribute to a wide range of worthy projects, including:

- annual giving,
- memorial and honorary contributions,
- planned giving,
- PHP support and contributions, and
- endowment and special funds.

Because the Trust is a nonprofit, 501(c)(3), charitable organization, all gifts are tax-deductible.

For further information, write to the Trust at:

Upgrading Diabetes Therapy

...now that we know it matters

Diabetes Carries High Health Care and Human Costs

Approximately 12 million Americans have diabetes, a chronic disease that can lead to blindness, renal disease, amputation, heart disease, and many other serious disabilities. The economic cost associated with diabetes is over $92 billion per year; and this does not take into account the cost in diminished quality of life of many patients with diabetes.

Diabetes is a complex disease, and ideally, each patient would have a specialized team of health care providers to care for them. But the reality today is that the vast majority of people with diabetes are treated by primary care physicians. It is imperative that physicians have the information and resources they need to formulate an aggressive management plan for their patients with diabetes — particularly in light of convincing new evidence about the efficacy of intense intervention.

Before we discuss the dramatic findings of the Diabetes Control and Complications Trial (DCCT) and what it means for physicians and patients, it will be useful to review the American Diabetes Association's (ADA) standards and the reality of diabetes care in Pennsylvania today. □

1989 ADA Standards Provided Clear Model for Care

In 1989, the American Diabetes Association published its "Standards of Medical Care for Patients with Diabetes Mellitus," which established a model of minimal standards for the care of patients with diabetes.[1]

The ADA standards can be briefly summarized as follows:

Initial Visit—Should include a comprehensive medical history, physical examination to establish or confirm the diabetes diagnosis and review previous treatment. The focus should be on risk factors, symptoms, and treatment of complications of diabetes.

Formulation of Management Plan—Should be designed as a partnership between the patient/family and all members of the health care team and should take into account the patient's condition, lifestyle, age, etc. Education is a key to achieving compliance with the plan, including teaching patients to recognize early signs of acute and chronic conditions requiring attention and self-monitoring of glucose levels.

"... the reality of diabetes care today is that many patients are still not receiving even the basic level of care recommended by the American Diabetes Association."

"Therefore, each physician must keep current the new standards affecting his/her delivery of care."

The management plan should include regular eye examinations and any other needed visits to specialists.

Continuing Care—Stressed as an essential part of the management plan. Patients starting insulin or undertaking treatment changes should be in contact with health care providers as often as necessary (even daily), and other patients should visit their physician quarterly or semi-annually as dictated by their particular circumstances. Such visits should include a glycosylated hemoglobin determination and any other needed lab tests. Each regular visit should include weight and blood pressure measurements, a foot exam, and treatment of symptoms and conditions.

The management plan should also be reviewed for patient compliance and progress toward goals; to identify and follow-up on problems; and to continue patient's self-care education as necessary.

Physician Awareness of Special Considerations—The standards note that illness can aggravate the hyperglycemia of diabetes, requiring changes in treatment. In addition, the standards list several conditions that require special considerations and treatment including diabetic ketoacidosis and hyperosmolar coma; severe or frequent hypoglycemia; childhood and adolescence; pregnancy; retinopathy; and so on. It is stressed that the appropriate medical/diabetes specialists should be consulted in treating patients.

The ADA promulgated these standards to "define basic medical care for people with diabetes," and went on to encourage physicians to provide "more extensive evaluation and management of the patient."

However, the reality of diabetes care today is that many patients are still not receiving even the basic level of care recommended by the ADA. □

In Pennsylvania and Across the Country, Diabetes Care Often Lags Behind the ADA Standards

Across America, most patients with diabetes are treated by primary care physicians, and adherence to the ADA standards is far from universal. One study conducted by the National Institutes of Health in 1992 found that 21% of patients with insulin dependent diabetes mellitus (IDDM) had never tested their blood glucose level and only 40% monitored it at least daily. Forty-seven percent (47%) of patients with non-insulin dependent diabetes mellitus (NIDDM) using insulin never monitored their glucose.[2]

In Pennsylvania, a random telephone survey of primary care physicians in 1988 found relatively low compliance with several important aspects of care for patients with diabetes. Although nearly all physicians said they provided patient education as well as weight and blood pressure measurements, they reported using glycosylated hemoglobin measurements only 1.8 times per year compared to the preferred frequency of four times per year in insulin-treated patients and in non-insulin-treated patients in poor metabolic control.[3]

The diagnosis and treatment of diabetes are problematic from a professional liability standpoint as well. Standards of care such as those promulgated by the ADA carry with them the potential for increased risk with regard to professional liability. In addition to the usual and customary theories of medical negligence, a physician can now be sued for failing to comply with the standards in place. Therefore, each physician must keep current the new standards affecting his/her delivery of care. Concomitantly, it can be argued that these same standards can be protective in that a physician's compliance can be a strong defense should malpractice litigation subsequently be brought against him/her.

The Pennsylvania Medical Society Liability Insurance Company (PMSLIC) provides malpractice insurance coverage for approximately 7,000 physician-members of the Pennsylvania Medical Society. The Company's claims experience between 1978 and 1992 includes nearly 200 claims and suits stemming from alleged negligent management of a diabetic patient. With 84% of those cases closed, indemnity payments totaling $12.4 million have been paid on behalf of the named defendants.

PMSLIC's cases demonstrate that the problems of diabetic management are not peculiar to any one or even a few specialties. Rather, defendants represent a wide assortment of medical and surgical specialties, including family and general practitioners, internists, cardiologists, pediatricians, ophthalmologists, orthopedic and plastic surgeons among others. The allegations in these cases go beyond "failure to diagnose" or "negligent treatment" in that many involve treatment of a problem totally unrelated to diabetes but which was complicated specifically because of the patient's disease; for example, the orthopedic management of an ankle fracture in a diabetic patient which ultimately resulted in a below-the-knee amputation, or the prescription of oral contraceptives by an OB/GYN to a young diabetic patient without careful, frequent monitoring of her glucose levels.

On a national level, the Physician Insurers Association of America (PIAA) Data Sharing Project, which includes data from 21 physician-owned and -operated professional liability carriers across the country, shows diabetes to be among the top 20 most frequently occurring and top 40 most expensive conditions contributing to the 102,342 malpractice actions which make up the Project as of June 1993.[4] □

1993 Diabetes Control and Complications Trial Confirms Value of Intensive Therapy

In June 1993, the dramatic results of the Diabetes Control and Complications Trial (DCCT) were made public. The DCCT confirmed that stringent control of blood glucose can prevent or dramatically reduce complications of diabetes, including retinopathy (reduced by 60%); nephropathy (reduced by 56%); and neuropathy (reduced by 60%). The ADA is currently examining its standards to respond to these landmark findings.

The DCCT studied 1,441 volunteers with IDDM over a period of nearly 10 years. The patients, who were between the ages of 13 and 39, were split into two groups to study the effects of conventional diabetes therapy compared to intensive therapy. Conventional therapy consisted of one or two insulin injections each day; daily monitoring of glucose levels; dietary education; and four physician visits a year. Intensive therapy involved three or more insulin injections each day (or use of an insulin pump); four or more glucose tests each day; and intense counseling on diabetes education, diet, exercise, and behavior.

There were risks associated with the intensive therapy. Patients in this group had three times the risk of severe hypoglycemia and were prone to weight gain (already a problem for many patients with diabetes). However, the DCCT Research Group concluded, "We believe that the risk of severe hypoglycemia with intensive therapy is greatly outweighed by the reduction in microvascular and neurologic complications."

Obviously, these findings will cause all physicians and health care professionals who treat patients with diabetes to examine their current practice. The following section provides further details about the parameters of the DCCT study, and sets forth a treatment/management plan for physicians. □

"The dramatic results of the DCCT underscore the importance of good control, periodic assessments of various organ function, and diabetes education. This study will be shared with all of our patients. It is essential that they understand that the extra effort and lifestyle change necessary for following a good diet, frequent monitoring of blood glucose, and additional insulin when necessary, is worth it. However, tight control may not be appropriate for all patients, and the physician must be selective."

—Francine D. Camitta, MD
Endocrinologist
York, PA

THE DEBATE IS OVER

In the spring of 1993, researchers called an early halt to the Diabetes Control and Complications Trial, or DCCT. Launched in the early 1980s, this multicenter study was designed to resolve, once and for all, whether "tight" blood glucose control can help prevent or slow the progression of long-term complications of diabetes, including eye, nerve, and kidney disease. The answer, in short, is **yes.**[1]

THE DCCT DESIGN

In the DCCT, 1,441 volunteers with type I (insulin-dependent) diabetes, ages 13–39, were randomized to one of two diabetes management plans:

- "conventional" therapy, with one or two injections per day, once-daily monitoring of blood or urine glucose, dietary education, and four physician visits a year;
- "intensive" therapy, involving three or more injections per day, or use of an insulin pump, with dosages adjusted on the basis of four or more daily blood glucose tests; intensive diabetes education and dietary, exercise, and psychosocial counseling; and monthly physician visits.

Basic clinical goals

For conventional therapy: "Clinical well-being"—no symptoms of high or low blood sugar; normal growth and development.

For intensive therapy: Blood glucose levels as close to normal as possible.

WHAT THE STUDY SHOWED

Benefits of intensified control

Both groups were monitored for signs of eye, nerve, or kidney disease. Overall, the intensive therapy group experienced a profound reduction in long-term complications.

Intensive therapy reduced

- retinopathy by up to 76%;
- nephropathy by up to 56%;
- neuropathy by up to 60%.

Overall, the intensive therapy group experienced a profound reduction in long-term complications.

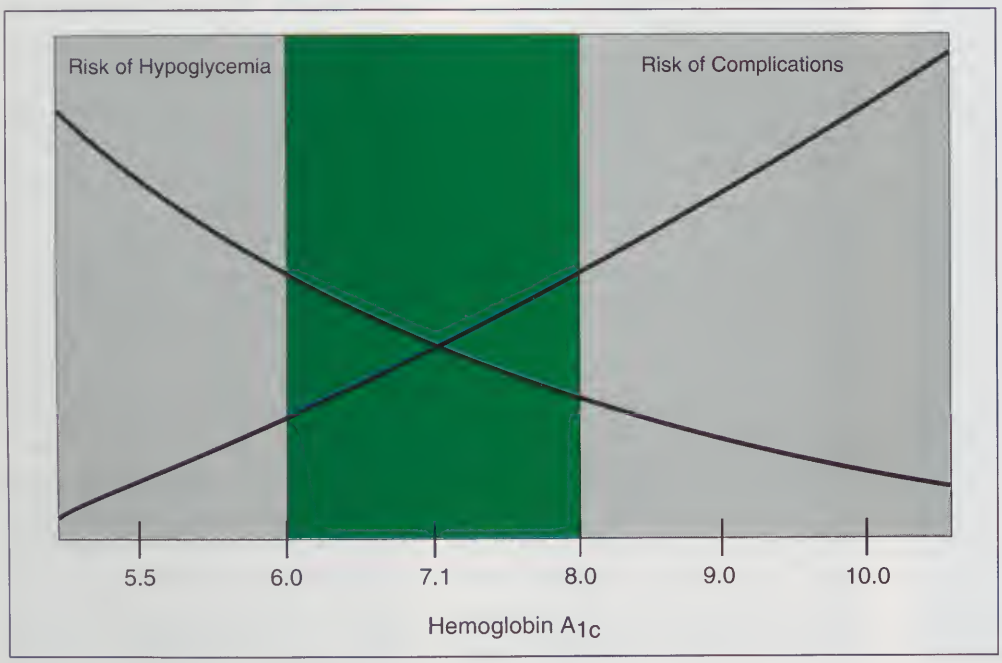

Figure. Artist's conception of principal DCCT findings. Based on results reported in *N Engl J Med* 1993;329:977-986.

The goals you and your patients set *today* for glycemic control can influence your patients' *future* health *substantially*.

The lower the average glycosylated hemoglobin levels (see Figure), the lower the risk for long-term complications.

Risks of intensified control

Despite frequent self-monitoring of blood glucose (SMBG) and close contact with the healthcare team, the intensively treated patients had *three times* as many severe hypoglycemic episodes (those requiring assistance from someone else or emergency room visits) as the conventionally treated patients.

Intensive treatment also promoted weight gain: After five years, intensively treated patients had gained approximately 10 pounds more than conventionally treated patients over the same period.

WHAT THE FINDINGS MEAN TO YOU

The goals you and your patients set *today* for glycemic control can influence your patients' *future* health *substantially*.

DOES THIS APPLY TO ALL PATIENTS?

The DCCT subjects all had insulin-dependent diabetes mellitus (IDDM), also called type I or (formerly) "juvenile-onset" diabetes. This disorder completely destroys a person's insulin-making capacity; insulin therapy is needed for survival. Roughly 300,000 people in the United States have this form of diabetes, which usually develops in youth or early adulthood.

The great majority of people with diabetes have a more common form of the disorder, known as non–insulin-dependent diabetes mellitus (NIDDM), also called type II or (formerly) "maturity-onset" diabetes. This disease usually strikes people who are older than 40 and overweight. Some 6.5 million Americans are known to have NIDDM, and it's estimated that another 6–7 million cases remain undiagnosed.

Although the DCCT findings directly apply only to patients with IDDM, the American Diabetes Association (ADA) has stated that

> **it seems reasonable to recommend tight control in many patients with non–insulin-dependent disease because it is presumed that the mechanisms by which glucose causes complications is the same in both forms of diabetes.[2]**

Although it can persist for years with few or no symptoms, NIDDM is not a "mild" form of diabetes. It also carries a great risk for chronic complications.

WHAT ABOUT OTHER COMPLICATIONS OF DIABETES?

People with diabetes are at increased risk for atherosclerosis—and thus for coronary disease, stroke, and peripheral vascular disease. These complications appear to be less tightly tied to glycemia than eye, nerve, and kidney complications; serum cholesterol and lipids, blood pressure, and smoking history also contribute to macrovascular complications.

Despite the confounding effects introduced by multiple risk factors, the group under intensive diabetes management had fewer coronary and peripheral vascular events than the controls. When all cardiovascular and peripheral vascular events were combined, intensive therapy reduced the risk of macrovascular disease by 41%. When the study ended, this trend was approaching, but had not yet reached, statistical significance. The ADA noted, "[It] is reasonable to suppose

that better [glycemic] control might slow macrovascular in addition to microvascular complications."[2]

HOW INTENSE DOES "INTENSIVE" HAVE TO BE?

What are the magic glucose numbers? Strictly speaking, there are none. The DCCT proved that the risk of long-term complications is lower in people with IDDM who had more ambitious glucose targets than in those with less ambitious targets. The trial wasn't designed to compare risks at specific levels of *actually achieved* control.

That's not to say that the goals weren't specific. The targets of intensive therapy were

- fasting and premeal blood glucose levels 70–120 mg/dL;
- postprandial glucose <180 mg/dL;
- 3:00 a.m. blood glucose (monitored weekly) >65 mg/dL;
- glycosylated hemoglobin (HbA_{1c}) levels as close to normal as possible ("normal" being ≤6.05% in the assay used by the DCCT).

When the DCCT investigators analyzed the findings by plotting average glycosylated hemoglobin levels against the risk of sustained retinopathy progression, the relation proved remarkably straightforward: The lower the mean glycosylated hemoglobin levels, the lower the risk for retinopathy. That result strongly suggests that *any* improvement in blood glucose control is likely to lower the risk of complications to some degree.

MEETING THE STANDARDS OF CARE

The American Diabetes Association has published standards of care for people with diabetes.[3] *If you treat diabetes, you should document your adherence to these standards,* regardless of the specific glycemic targets you and your patients set. A sample checklist of these recommendations appears on page 13.

UPGRADING DIABETES THERAPY

IDDM: BASIC GUIDELINES

The management of diabetes with intensive insulin regimens requires substantial resources and expertise. If your practice is not geared for this kind of treatment approach, it may be preferable to refer IDDM patients to an endocrinologist or diabetes center. At a minimum:

- Every patient with IDDM should take at least two insulin injections a day. If they are taking only two, these should contain a mixture of short- and intermediate-acting insulin. Such a regimen may achieve adequate glycemic control in individuals who eat and exercise on very regular schedules. **However, three or more injections a day or use of an insulin pump should be recommended, unless clearly contraindicated.**
- Every patient with IDDM (or parent of young children with IDDM) should measure blood glucose at least before each injection. They should be taught how to adjust premeal dosages of short-acting insulin on the basis of SMBG results, calorie intake, and physical activity.
- *No patient with IDDM should adjust insulin on the basis of urine glucose tests alone.* Urine tests for ketones, however, should be performed during

TOOLS FOR INTENSIFYING CONTROL

Why has the 50-year debate over blood glucose control and long-term complications been resolved only now? Because the tools for attempting truly tight control have only been in existence since the late 1970s. The key advances, in addition to new drugs and insulin-delivery systems, were two new ways to monitor the effects of diabetes therapy:

- **Self-monitoring of blood glucose (SMBG).** Finger-prick blood glucose tests enable patients to determine their blood glucose level immediately, anywhere. For patients on advanced insulin regimens, SMBG allows precise premeal dosage adjustments. For anyone with diabetes, it can help monitor the effectiveness of treatment and serve as a motivational tool.
- **Glycosylated hemoglobin testing** (also known as glycohemoglobin, glycated hemoglobin, HbA_1, or HbA_{1c} testing). This laboratory test measures the level of glucose-altered (glycosylated) hemoglobin that has accumulated in the blood over the preceding 2–3 months. It's an indispensable gauge of a person's overall level of diabetes control. (**Note:** Different laboratories use slightly different scales for their glycosylated hemoglobin results—blood from a normal volunteer might read 6% at one lab and 7% at another. So know the reference values for the lab you use.)

Patients with IDDM should be taught how to adjust premeal dosages of short-acting insulin on the basis of blood glucose test results, calorie intake, and physical activity.

periods of illness or stress, or whenever blood glucose rises above 240 mg/dL.

- Every patient with IDDM should carry some form of simple carbohydrate (eg, glucose tablets) to counteract hypoglycemia. Family members (and, ideally, co-workers or school personnel) should know how to administer glucagon in the event of severe hypoglycemia.
- Every patient with IDDM should have 24-hour access to a health professional knowledgeable about diabetes.
- Every patient with IDDM should receive education from professionals who can help develop and monitor a diabetes management program; this should include an eating plan, exercise plan, and training on such topics as managing diabetes during sick days and when traveling.

According to the DCCT researchers, IDDM patients for whom intensive diabetes therapy *may not* be appropriate include

- patients who experience frequent severe hypoglycemia or who do not experience the typical early warning signs of hypoglycemia (eg, sweating, trembling);
- patients whose diabetic complications, particularly renal disease, are already far advanced;
- patients with coronary or cerebrovascular disease (whose conditions may be worsened by frequent or severe hypoglycemia);
- children under 13 years. (The DCCT didn't study anyone younger. According to the ADA, tight control is contraindicated in children under 2 years, and should be attempted with extreme caution in those under 7 years.)[2]

NIDDM: A Stepped-Care Approach

The chart running across the centerfold is a simplified guideline for upgrading diabetes therapy in people with NIDDM. It is generalized and does not apply to all patients and situations. The glucose values defining "unacceptable," "better," and "best" are broad estimates, based on typical blood glucose tests. The accompanying glycosylated hemoglobin values are a somewhat more reliable guide.

Key points

- *Resource inventory.* Before intensifying a patient's therapy—indeed, before treating diabetes at all—you should take stock of the resources and knowledge needed to apply the regimen successfully. If they are not available, it may be preferable to refer the patient to a specialist or diabetes treatment program. Resource needs grow cumulatively with more advanced diabetes treatment regimens.
- *Go for the green.* The object is to improve blood glucose control from the red "unacceptable" zone (BG >200 mg/dL; HbA_{1c} >10%) to the green "best" zone (BG <140 mg/dL; HbA_{1c} 6–8%), where the best chances of preventing complications reside.
- *The middle ground.* The yellow ("better") zone corresponds roughly to conventional control in the DCCT. At this level of control, a patient will likely feel well most of the time. But the risk of complications is significantly higher than that for patients in the "best" zone.
- *Document discussions.* There may be sound reasons why you

and your patient decide that "better" is good enough. But in light of the DCCT, make sure your patient understands that lower blood glucose levels will likely decrease the risk of complications, and document that discussion. Patients who develop complications in the future will have reason to ask whether their doctors took aggressive enough steps to move them from "better" to "best." You should also advise the patient of the increased risk of hypoglycemia if a decision is made to intensify therapy.

STEP 1: DIET AND EXERCISE

Resource inventory

- Education capability for meal planning, exercise counseling, and (if required) weight loss
- Diabetes education capability (nurse/educator if possible)
- Minimum testing:
  —Glycosylated hemoglobin
  —Lipid profile
  —Microalbuminuria, serum creatinine
  —ECG, BP

For an individual newly diagnosed with NIDDM and without acute symptoms of diabetes, the first-line therapy is a diet and (if not medically contraindicated) exercise plan. In some patients, these measures may be all that's needed to control diabetes adequately, although about 85% of NIDDM patients do eventually require medication. Even then, diet remains essential. In fact, dietary backsliding is at the root of many medication "failures."

Dietary goals. For obese NIDDM patients—the majority—the primary dietary goal is weight loss. When patients lose weight, their tissues become more sensitive to insulin and thus remove more glucose from the blood; weight loss also reduces glucose production in the liver.

In addition to calorie restriction, dietary goals include

- distributing calories as evenly as possible throughout the day, to avoid large after-meal glucose "excursions";
- maintaining a balanced diet, with about 50–60% of calories from carbohydrates (especially high-fiber foods), no more than 30% of calories from fat, and the balance from protein. In other words, a basic "heart healthy" diet;
- moderation in sugar and alcohol consumption. For most patients, strict prohibition of either is no longer considered necessary. Sugar taken as part of a balanced meal should not raise blood glucose dramatically.

If you have the expertise and the time, you can sit down with the patient, explain how food affects diabetes control, and help him or her develop a sensible and palatable meal plan. But weight loss is difficult, and you will probably need to enlist the aid of a registered dietitian or refer your patient to a local, reputable weight-loss program.

Exercise. Physical activity (specifically, aerobic exercise, as opposed to resistance training) lowers blood sugar acutely. Aerobic conditioning also increases the body's overall sensitivity to its own insulin, aids weight loss, and has a favorable impact on serum lipids. If a patient is new to exercise and over age 35, an exercise tolerance test is recommended to make sure

About 85% of NIDDM patients eventually require medication. Even then, diet remains essential.

Glycosylated hemoglobin testing should be performed at least twice a year in all people with diabetes.

there is no underlying vascular disease. If an examination yields no reason to avoid exercise, recommend it. If the patient has no idea how to begin, you can have phone numbers of local exercise programs ready or suggest a trip to an exercise physiologist for help in developing a personalized program. If the patient has significant vascular disease, an exercise program should not be recommended until an appropriate medical evaluation has been completed.

Monitoring. If you treat diabetes, you must become familiar with glycosylated hemoglobin testing. When you are instituting or changing therapy, a baseline glycosylated hemoglobin test, followed by another in a few months, is an excellent way to see whether the patient's glycemic control has actually improved. This laboratory test should be performed *at least twice a year in all people with diabetes,* according to standards of diabetes care developed by the American Diabetes Association.[3]

If diet and exercise alone achieve acceptable control, glycosylated hemoglobin testing during periodic checkups may be all the glucose monitoring needed. However, all patients should be encouraged to learn SMBG and use it regularly to determine how their treatment plan is working.

Monitoring for complications. Monitoring your patient for signs of long-term complications is also essential from the very start. Because NIDDM often goes undiagnosed for years, it's not unusual to discover signs of complications at the time diabetes is diagnosed. One fairly new resource in this regard is microalbuminuria testing—a way of detecting minute quantities of urinary protein. Even if a standard urine dipstick test turns up negative for protein, microalbuminuria could indicate early signs of diabetic kidney disease, a strong argument for intensive glucose control. Vigorous control of hypertension, if present, has also been shown to help slow the progression of nephropathy. Also, all people with diabetes who are older than 30 years or have had diabetes for at least 5 years should have yearly ophthalmic exams.

STEP 2: ADD ORAL HYPOGLYCEMIC AGENT

Resource inventory

- Resources as for Step 1
- Oral agent selection rationales
- Education on dosage, timing, adverse drug interactions, and hypoglycemia
- SMBG training

If, after a 3–month trial of diet and exercise, the regimen does not bring blood glucose concentrations into an acceptable range, or if it achieves "better" control when "best" is the agreed-upon goal, adding an oral hypoglycemic agent (OHA) is usually the next step. Like all clinical judgments, this is not an ironclad rule. Many physicians would consider insulin the first-line drug in some patients, eg, young, lean individuals with NIDDM.

A common side effect of sulfonylureas is hypoglycemia. Because research and clinical experience show that many patients cannot sense hypoglycemia correctly—and may treat for it when their blood glucose levels are in a normal range—those on OHAs also need to be trained in SMBG. SMBG can help document the effectiveness of treatment, confirm hypoglycemic episodes, and aid in recognition of high blood glucose levels caused by mistaken or excessive treatment for hypoglycemia.

Neither doctor nor patient should be lulled into thinking that an OHA, or insulin for that matter, is a license to abandon diet and exercise.

STEP 3: CHANGE TO INSULIN

Resource inventory

- Resources as for Steps 1 and 2
- Nurse/educator availability for education on insulin dosage, timing, injection techniques, hyper-, and hypoglycemia
- Dietitian availability for coordinating meal plan with insulin injections.
- HbA_{1c} testing 2–4 times a year
- Physician accessibility during dosage adjustment periods

If OHAs at the maximum recommended dosage do not bring blood glucose concentrations out of the unacceptable range within 3 months, if they achieve "better" control when you and your patient have agreed your goal is "best," or if they work for a time and then lose their effectiveness, the next step is insulin. Within the first year of use, OHAs prove insufficient in about 30% of patients; they lose effectiveness in 5 to 10% of users each year after that.

The framework of these simplified guidelines incorporates four sequential steps: 1) diet and exercise, 2) addition of OHAs, 3) change to insulin, and 4) intensive insulin therapy. In some cases, physicians have found that they could achieve more normal blood glucose concentrations and extend the period of OHA use by adding an injection of intermediate-acting insulin at bedtime.

Note that NIDDM does not become IDDM just because a patient switches to insulin. The patient simply becomes an insulin-requiring person with non–insulin-dependent diabetes.

In NIDDM, unlike IDDM, a regimen of two daily insulin injections stands a reasonable chance of achieving adequate—in some patients even excellent—glycemic control. Such success is most likely when NIDDM is of recent onset with relatively mild hyperglycemia.

A reasonable initial dose of insulin is 0.25 units per pound of body weight per day. Common two-injection insulin regimens, in order of increasing complexity, include

- Two injections of intermediate-acting insulin, two-thirds before breakfast and one-third before supper;
- Two injections of premixed insulin (eg, 70% NPH, 30% regular), two-thirds before breakfast and one-third before supper;
- Two injections of mixed short- and intermediate-acting insulin, where the dosage of the short-acting insulin is adjusted according to premeal SMBG test results and the anticipated size of the meal.

STEP 4: INTENSIVE INSULIN THERAPY

Resource inventory

- Resources as for Steps 1–3
- 24-hr hotline
- SMBG ≥4 times daily
- Nurse/educator availability for intensive training on hypoglycemia (awareness, prevention, treatment) and for advanced insulin dosage adjustment training
- Availability of professional help for emotional and motivational counseling

NIDDM does not become IDDM just because a patient switches to insulin. The patient simply becomes an insulin-requiring person with non–insulin-dependent diabetes.

Intensive insulin regimens are not common therapy for NIDDM but may be necessary in patients who develop severe insulin deficiency in addition to insulin resistance.

If two injections per day, even in a split/mixed regimen, do not bring blood glucose concentrations into an acceptable range, or if they achieve "better" when you want "best," the last option is multiple-injection or insulin pump therapy: the "intensive" regimens used in the DCCT. These are not common regimens for treating NIDDM but may be necessary in patients who develop severe insulin deficiency in addition to insulin resistance. They require experienced and available health professionals, and a dedicated, motivated patient.

Typical multiple-injection regimens include

- Three SMBG-adjusted premeal injections of regular insulin, with intermediate-acting insulin mixed in at supper, to cover glycemia overnight;
- Three-injection regimen consisting of 1) a prebreakfast injection of intermediate- and short-acting insulin, 2) a presupper injection of short-acting insulin, and 3) a bedtime injection of intermediate-acting insulin to last all night;
- Three SMBG-adjusted premeal injections of regular insulin plus an injection of long- or intermediate-acting insulin at bedtime.

Insulin pumps, preferred by some patients, are computerized, motor-driven syringes that deliver insulin to a subcutaneous catheter. The pump, which contains short-acting insulin only, delivers a small amount constantly (the basal delivery) and allows the patient to adjust premeal doses (boluses) on the basis of SMBG results.

Unless you are already part of a team that includes, at a minimum, a diabetes nurse/educator, dietitian, and mental health professional, and unless a knowledgeable team member is available to answer questions 24 hours a day, it's best to leave these intensive regimens to diabetes specialists.

Clinical Practice Recommendations for Diabetes Mellitus

This guideline indicates minimum standards of continuing care for stabilized patients with diabetes; it is not intended to preclude more extensive evaluation and management. A comprehensive medical history should be taken at the initial visit to confirm the diagnosis, review previous treatment, evaluate glycemic control and complications status, and provide a basis for continuing care.

Indicate task was performed by initialing box. Shaded boxes are optional tasks.

Good News About Your Diabetes

Scientists have just proved that controlling blood sugar *carefully* can help prevent the long-term complications of diabetes.

A study called the Diabetes Control and Complications Trial (DCCT) compared two groups of people with diabetes:

- Those who controlled their blood sugar well enough to avoid extremes of high and low blood sugar and to feel well most of the time.
- Those who worked closely with doctors, nurses, and others to keep their blood sugar as near to normal as possible.

IT REALLY WORKED!

The extra effort paid off! People who worked harder to keep the amount of sugar in their blood near normal had fewer signs of diabetic eye, kidney, and nerve disease at the end of the 6 1/2-year study. These long-term problems were reduced by more than half. Keeping blood sugar as close to normal as possible also tended to lower the risk of heart disease and poor leg circulation.

WHO CAN BE HELPED?

The study was done only in people taking insulin, but experts agree that all people with diabetes—whether they're treated with diet or pills or insulin—can lower their risk of complications by improving their blood sugar control.

THE TRADE-OFF

But when you aim for normal blood sugar levels, you increase the chances of overshooting the target and lowering sugar levels too far. This is true mainly if you take insulin, but it can also occur if you take diabetes pills. In the DCCT, the group working toward normal blood sugar had three times more low blood sugar reactions than the other group. You can learn to watch out for these reactions and prevent or correct them, but they can be dangerous if not treated quickly and properly.

One other downside: if you take insulin several times a day, controlling blood sugar more tightly can cause some weight gain because insulin helps your body store calories better.

WHAT TO DO?

Ask your doctor about the DCCT and whether a change in treatment makes sense for you. Changing your treatment plan today could make a big difference to your health in the future.

WHAT ELSE IS NEW?

Diabetes experts recently spelled out the basic steps that all health professionals should follow for people with diabetes.

Whenever you visit your doctor or clinic, expect to discuss:

- how well your treatment plan is working
- the target glucose levels you're aiming for
- your blood glucose self-monitoring results
- any high or low blood glucose results
- your medications
- any changes in your routine

And you should have these checked:

- your weight
- your blood pressure
- your blood glucose
- your feet and eyes

You should also have a *glycosylated hemoglobin* test: it provides a snapshot of how well your blood glucose was controlled over the last 2–3 months.

BETWEEN VISITS

Write down your test results and make notes about things you want to talk about.

EVERY YEAR

You should have these tests:

- cholesterol
- triglycerides
- an electrocardiogram (heart test)
- kidney function
  —creatinine in blood
  —protein in urine
- a complete eye exam by an eye doctor

Managing Cancer's Pain

Maureen Hoepfer

Dr. Simmonds

Mary Simmonds, MD, is a clinical assistant professor of medicine at Penn State's College of Medicine and is also in private oncology practice in Cumberland County. She is one of the founders and now serves as co-director of the Pennsylvania Cancer Pain Initiative, a voluntary statewide organization of individuals concerned with cancer pain issues.

This year nearly six million people will be diagnosed with cancer. Of these, more than two-thirds will experience pain at some time during their illness. Between 50 and 80 percent of these patients will receive inadequate pain relief—not because their pain is not receptive to therapy, but because they are undertreated.

Despite major advances in the detection and treatment of cancer, Mary Simmonds, MD, says many cancer patients suffer in silence because physicians fail to adequately manage their pain. Misconceptions, cultural biases, and a lack of education on the subject contribute to this situation.

"It's ironic. I read a survey one time that revealed that the number one reason people go to doctors is because they have some sort of pain," Dr. Simmonds says. "Yet, medical education is geared toward teaching the diagnosis and treatment of a disease so the symptoms go away. It is not geared as much towards treating specific symptoms, such as pain. We do a poor job of teaching medical students how to deal with pain."

The tragedy of cancer pain is that almost all of this pain can be relieved by common modalities. Because medical education emphasizes the treatment of cancer, the relief of associated pain is often a secondary goal, she adds.

Misconceptions about pain

Treating cancer pain is also affected by various attitudes and misconceptions that are common in this country, Dr. Simmonds contends. For example, systemic analgesics, including opiates, are the mainstays of cancer pain treatment. Unfortunately, one of the chief barriers to adequate cancer pain treatment is fear of narcotic addiction. Significant confusion exists among patients and physicians about tolerance to such drugs, physical dependence on them, and psychological dependence or addiction.

Dr. Simmonds says tolerance develops in many patients who take opiates over a long time. Since developing tolerance can cause concern among patients, it's important to make patients understand that tolerance is not addiction, that higher doses may become necessary with time, and that this does not in itself signal disease progression or addiction, she explains.

Physical dependence is distinct from true addiction. Dr. Simmonds says 99 out of 100 cancer patients never become physically dependent on an opiate. These patients often refrain from taking their drugs on a regular schedule. It is rare that cancer patients suffer withdrawal symptoms from taking opiates, she explains. This would occur only if physical dependence had developed.

True addiction involves psychological dependence and is also very rare among cancer patients, according to Dr. Simmonds. Addicted individuals develop a craving for the narcotic and arrange their lives to obtain the drug and induce euphoria.

In contrast, cancer patients use narcotics simply to achieve some measure of comfort. She adds that experts estimate fewer than one in every 100 narcotic addicts were introduced to the drug in a medical setting.

Some practitioners also fail to adequately manage a patient's cancer pain because they fear they could be indicted for misprescribing if their patients require high opioid doses. "There are many doctors who think they will be turned into the authorities for prescribing opiates," Dr. Simmonds explains. "They fear their ID number will be fed into the computer, and they're going to be raided. Although the

Ms. Hoepfer is a marketing associate for the Society's Educational and Scientific Trust. This article is one in a series, begun in January 1993 and ongoing through 1994, sponsored by the Trust's endeavor to address public health needs, Keystones of Public Health.

Drug Enforcement Agency does check, as long as you're licensed to prescribe opiates, you have the authority under Pennsylvania law to use these drugs to help relieve your patient's pain."

Cultural biases

The cultural interpretation of pain is another barrier to adequate treatment, Dr. Simmonds says. The attitude that suffering must accompany illness is strongly ingrained. Many patients are reluctant to report pain to their physicians, fearing they will be seen as complainers. Since consultation time is brief, some patients are afraid they will distract the physician from treating the disease if they complain of pain. Also, many patients think complaining about pain will alarm family members by suggesting the cancer has advanced.

"Physicians themselves are affected by their own cultural biases," she says. "A physician who comes from a stoic background and one whose background is more effusive will have different ideas about their own patient's pain." Education of both the health professional and the public is the key to better management of cancer pain, she says.

Pennsylvania Cancer Pain Initiative

The Pennsylvania Cancer Pain Initiative (PCPI) proposes to use education as the primary vehicle to achieve its goal: To reduce suffering from cancer pain.

The voluntary effort began in the fall of 1988 after Dr. Simmonds and Peter Houts, PhD, of the Department of Behavioral Medicine at Penn State's Milton S. Hershey Medical Center and PCPI's other co-director, attended an international conference on cancer pain in New York. At the conference, they heard a presentation about an innovative program that began in Wisconsin in 1984, the Wisconsin Cancer Pain Initiative. That organization's efforts defined the scope of the problem in the state, started educational programs for both cancer patients and health professionals, and initiated lobbying campaigns for needed legislative and regulatory reforms.

Drs. Simmonds and Houts took the idea of instituting a Pennsylvania Cancer Pain Initiative to the Pennsylvania Department of Health's Division of Health Cancer Control. The idea fit with the goals of the Pennsylvania Cancer Control Plan, and PCPI received a funding grant which began in September 1989.

Since then, PCPI has grown to include 700-plus supporters representing 53 counties, and more than 100 hospitals and health care facilities throughout Pennsylvania. Those involved include physicians, nurses, pharmacists, social service personnel, public officials, community leaders, and persons diagnosed with cancer and their families.

The organization is headed by a 13-member steering committee and employs a part-time nurse administrator. Dr. Simmonds says much of the organization's work is accomplished through its committees: Medical Practice, Nursing, Pharmacy, Media, Regulatory, and Public Education.

Since PCPI began, the group has focused primarily on educational activities (see upcoming events, at right), but also publishes a quarterly newsletter and has a speakers bureau available to hospitals, medical organizations, and community groups.

"We also act as a clearinghouse for both patient and professional information about cancer pain management, " Dr. Simmonds says. "Through our Nursing Committee, we have developed a patient education brochure on this issue, and we have been collecting information about other published materials, videotapes, and audiotapes currently available for both oncology professionals and patients regarding cancer pain."

In October, PCPI will sponsor its first Cancer Pain Role Model Program in Hershey. Dr. Simmonds explains this program trains physicians and nurse educators in pain assessment and treatment so they can return to their institutions and teach their colleagues analgesic principles.

In addition, on March 2, the Agency for Health Care Policy and Research (AHCPR) released guidelines on cancer pain management. PCPI will play a major role in disseminating these guidelines to health care professionals and promoting their use.

"Pennsylvania was one of the first states after Wisconsin to establish a Cancer Pain Initiative. But more and more states are now becoming aware of the importance of cancer pain management and beginning their own initiatives. In fact, the American Cancer Society recently decided to address this issue on a national level," Dr. Simmonds says. "PCPI is an all-volunteer effort. Sometimes I ask myself, 'Are we doing enough?' We have a difficult goal, but hopefully our collective efforts will make a difference in reducing the suffering related to cancer." ⬡

PCPI Upcoming Events

April 15, 1994

Cancer Pain Management: Philosophy, Policy, and Practice

PCPI's annual educational conference will be held at the Harrisburg Holiday Inn East. Topics will include: integration of cancer pain management into health care policy, pediatric cancer pain, special needs of the elderly, and ethical decision making.

October 1, 1994

The Cancer Pain Role Model Program

Physicians and nurse educators who attend this one-day, "train-the-trainer" program, to be held at the Hershey Lodge and Convention Center, will learn about the assessment and treatment of cancer pain, patient and family education techniques, and methods of effective consultation and professional education. After training, participants will be better able to train their colleagues about methods to manage cancer pain.

For more information on these offerings or how to become more involved in the initiative, call PCPI Executive Director Georgia Trostle, RN, at (717) 531-6849.

MENINGOCOCCAL DISEASE: A CALL FOR VIGILANCE

The newspaper headline screams up at you, "Student Stricken with Meningitis!" You remember how your patient presented: Her symptoms of cough, headache, and sore throat were typical of the many other cases of upper respiratory tract infection you had been seeing in your practice. However, she seemed more ill than usual, and you had insisted that she return to see you if she felt worse, or the following day if there was no improvement.

By her return the next day, she had developed fever, nausea, and headache, and on reaching the hospital for admission, she had become lethargic. Her white count was elevated with increased polymorphonuclear leukocytes. Her cerebrospinal fluid pressure and protein were increased, the CSF PMN count was 20,000 per microliter, and the glucose was low. The Gram stain was non-diagnostic, but the CSF latex agglutination indicated the presence of *Neisseria meningitidis.* These results were confirmed when both blood and CSF cultures yielded the organism. Serogrouping, essential for appropriate public health measures, was in progress at the Pennsylvania Department of Health Bureau of Laboratories in Lionville.

After diagnostic tests were completed on admission, antibiotic therapy had been instituted immediately with Penicillin G—20 million units per day—and she had responded well. Your prompt report to the health department and your student's university had initiated the search for contacts in need of prophylaxis, and the distribution of information to relieve the fear and anxiety of those in contact with your patient.

N. meningitidis is a natural inhabitant of the human oropharynx. Transmission is from person to person through the inhalation of aerosolized nasopharyngeal secretions. Colonization with the closely related *N. lactamica* (which does not cause disseminated disease) during the first few years of life, followed by colonization with *N. meningitidis* through the teenage years, includes development of group-specific antibodies. Two to 30 percent of individuals may carry the organism in their nasopharynx, while carriage rates in teens are typically 15-25 percent. Carriage rates in close contacts of a patient with invasive disease may be as high as 40 percent.

It is generally thought that carriers, and not patients, are how this disease is spread, and that case-to-case transmission is rare. Thus, identification of carriers by throat culture does not determine those in need of prophylaxis. The incidence of invasive meningococcal disease is relatively rare, as discussed below. However, the attack rate in household contacts of a case is up to 1,000 times the overall rate, and during epidemic periods, may be 15,000 times the overall rate. It is on that basis that antibiotic prophylaxis of intimate contacts of individual cases is recommended (see box below).

Epidemiology and public health considerations

In Pennsylvania, cases of meningococcal disease are sporadic. In 1992, 96 patients were diagnosed with invasive meningitidis caused by *N. meningitidis.* Seven (7 percent) of these individuals died. In 1993 there were 94 reported patients with 13 deaths (14 percent). Overall incidence of meningococcal disease was 0.8 cases per 100,000 Pennsylvania residents for both 1992 and 1993 (based on 1990 census figures), although rates from Philadelphia and several counties statewide were two to four times higher than this baseline figure during the two-year period.

In a suspected meningococcal outbreak or cluster, "first line" medical evaluation is crucial for successful public health assessment and effective intervention. The first priority after treating and stabilizing the patient is to identify, contact, and prophylax *direct, close contacts* (see box below).

Neisseria meningitidis is contained in large droplets that result when a person sneezes or coughs. Bacteria contained in these droplets usually fall quickly to the floor and, when dry, become non-infectious. Most transmission of the bacteria from one person to another results from prolonged close contact, or by direct contact with nasopharyngeal secretions. Close or prolonged contact is defined as having intimate contact, living in the same house/dorm room, or, if less that five years of age, attending the same day care facility as the index patient.

It must be stressed that casual contact (such as shaking hands, riding in the same bus, or attending the same lecture) and formite contact (such as contact with utensils or inanimate objects) does *not* represent a significant source of exposure to meningococcal disease in adults. A child, especially one with respiratory symptomatology in a day care center, makes a more effective transmission source of the etiologic organism that an adolescent or adult. Health care workers who follow routine universal precautions during patient contact—even those who care for patients diagnosed with meningitis—are at low risk of meningococcal infection unless they have had mouth-to-mouth contact with the patient.

Several recent outbreaks of meningococcal disease have led to targeted mass vaccination campaigns. The decision to immunize a patient or a community must be carefully made using some specific guidelines.

Chemoprophylaxis for Close Contacts of Meningococcal Cases

Rifampin: 600 mg every 12 hours for two days for adults (4 doses); use 10 mg/kg for children older than one month; use 5 mg/kg for children less than one month

Ceftriaxone: Only shown effective against Group A; single I.M. dose of 250 mg for adults; use 125 mg for children under 15 years

Ciprofloxacin: For adults only; 500 mg single oral dose

Sulfadiazine (if sensitive): Not effective for many strains resistant to sulfa; 1 g every 12 hours for two days for adults and older children (4 doses); use 125-150 mg/kg/d divided into four equal doses for each of two days; for infants and children (8 doses)

Reference: *Benenson, AS. Control of Communicable Diseases in Man, 1990.*

Bacterial isolation and rapid serogroup identification is an essential step. An increase of confirmed disease occurrence above baseline incidence, as well as the identification of a specific population at increased risk for infection, are two additional parameters which must be established.

A safe meningococcal polysaccharide vaccine, a quadrivalent A, C, Y, and W-135 vaccine given as a single dose, is available for use in the U.S., but routine use is not recommended for several reasons:

1) The vaccine is *not* effective against serogroup B meningococcus which accounts for the majority of isolates from sporadic cases.

2) The vaccine does not always provide adequate immunity when administered to children under the age of 2 years—the main age group acquiring the disease.

3) Vaccination is the incorrect alternative to prompt contact identification and chemoprophylaxis.

4) Serogroup specific immune response produced by the vaccine is of unknown duration so that booster doses would frequently be necessary if population-wide immunity was a desired outcome.

About two percent of vaccinees may develop soreness, localized erythema, and/or low-grade fever lasting one to two days. The risk of severe or life-threatening allergic reactions is probably less than one in 100,000 vaccinations.

Meningitis, as well as all types of meningococcal disease, are *mandatorily* reportable conditions within the commonwealth. Physicians who are not sure of their local health jurisdiction should contact the Pennsylvania Department of Health Division of Communicable Disease Epidemiology at (717) 787-3350 (7:30 a.m.-4:30 p.m., Monday through Friday) or (717) 737-5349 (evenings, weekends, and holidays).

Laboratory isolates should be forwarded immediately to the Pennsylvania State Public Health Laboratory in Lionville for Serogroup identification. To arrange shipment samples, call (610) 363-8500.

Controlling Meningococcal Disease

Sporadic Cases

1. Report to health department
2. Antibiotic prophylaxis to close contacts
3. Surveillance for symptoms and new cases
4. Information distribution

Clusters or Outbreaks

In addition to the above, vaccination of a specific population only if:

a. Ongoing transmission
b. Vaccine preventable serogroup (A, C, Y, W-135)
c. Defined population
d. Increased rate

Contributed by Maria Moll, MD, and Hugh Mainzer, DVM, MS. Dr. Moll is an epidemiologist, Division of Communicable Disease Epidemiology, Pennsylvania Department of Health. Dr. Mainzer is an Epidemic Intelligence Service officer, U.S. Centers for Disease Control and Prevention, assigned to the Pennsylvania Department of Health.

YOCON®
YOHIMBINE HCl

Description: Yohimbine is a 3a-15a-20B-17a-hydroxy Yohimbine-16a-carboxylic acid methyl ester. The alkaloid is found in Rubaceae and related trees. Also in Rauwolfia Serpentina (L) Benth. Yohimbine is an indolalkylamine alkaloid with chemical similarity to reserpine. It is a crystalline powder, odorless. Each compressed tablet contains (1/12 gr.) 5.4 mg of Yohimbine Hydrochloride.

Action: Yohimbine blocks presynaptic alpha-2 adrenergic receptors. Its action on peripheral blood vessels resembles that of reserpine, though it is weaker and of short duration. Yohimbine's peripheral autonomic nervous system effect is to increase parasympathetic (cholinergic) and decrease sympathetic (adrenergic) activity. It is to be noted that in male sexual performance, erection is linked to cholinergic activity and to alpha-2 adrenergic blockade which may theoretically result in increased penile inflow, decreased penile outflow or both.

Yohimbine exerts a stimulating action on the mood and may increase anxiety. Such actions have not been adequately studied or related to dosage although they appear to require high doses of the drug. Yohimbine has a mild anti-diuretic action, probably via stimulation of hypothalmic centers and release of posterior pituitary hormone.

Reportedly, Yohimbine exerts no significant influence on cardiac stimulation and other effects mediated by B-adrenergic receptors, its effect on blood pressure, if any, would be to lower it; however no adequate studies are at hand to quantitate this effect in terms of Yohimbine dosage.

Indications: Yocon® is indicated as a sympathicolytic and mydriatric. It may have activity as an aphrodisiac.

Contraindications: Renal diseases, and patient's sensitive to the drug. In view of the limited and inadequate information at hand, no precise tabulation can be offered of additional contraindications.

Warning: Generally, this drug is not proposed for use in females and certainly must not be used during pregnancy. Neither is this drug proposed for use in pediatric, geriatric or cardio-renal patients with gastric or duodenal ulcer history. Nor should it be used in conjunction with mood-modifying drugs such as antidepressants, or in psychiatric patients in general.

Adverse Reactions: Yohimbine readily penetrates the (CNS) and produces a complex pattern of responses in lower doses than required to produce peripheral a-adrenergic blockade. These include, anti-diuresis, a general picture of central excitation including elevation of blood pressure and heart rate, increased motor activity, irritability and tremor. Sweating, nausea and vomiting are common after parenteral administration of the drug.[1,2] Also dizziness, headache, skin flushing reported when used orally.[1,3]

Dosage and Administration: Experimental dosage reported in treatment of erectile impotence.[1,3,4] 1 tablet (5.4 mg) 3 times a day, to adult males taken orally. Occasional side effects reported with this dosage are nausea, dizziness or nervousness. In the event of side effects dosage to be reduced to ½ tablet 3 times a day, followed by gradual increases to 1 tablet 3 times a day. Reported therapy not more than 10 weeks.[3]

How Supplied: Oral tablets of Yocon® 1/12 gr. 5.4 mg in bottles of 100's NDC 53159-001-01 and 1000's NDC 53159-001-10.

Recognizing the Chemically Dependent Physician

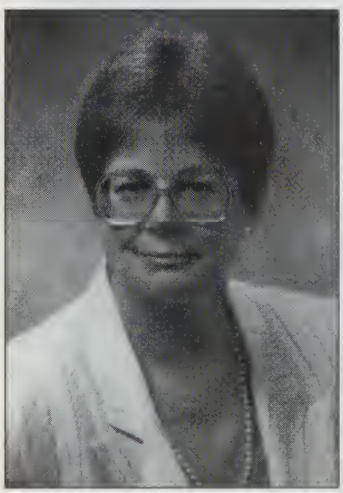
Penelope P. Ziegler, MD

When drug and/or alcohol abuse is suspected in a physician, action must be taken as soon as possible to provide intervention and treatment. This article overviews the signs and symptoms of impairment, explains the barriers to identifying the problem and getting help for the physician, and offers resources for impaired physicians and their colleagues, family, and friends.

Physicians have become increasingly knowledgeable about alcoholism, drug addiction, and related disorders in recent years. As the body of scientific research and the public's awareness of these problems increase, more and more patients are identified and referred for treatment by their primary care physicians. In addition, medical practitioners are alert to the addictive potential of certain classes of drugs and are careful to observe their patients' use of these medications, detecting signs of abuse, and/or dependence at an early stage.

Yet, despite the improving climate for recognizing addictive disorders, physicians who themselves are experiencing problems related to the use of alcohol and other drugs often are not identified and referred for treatment until late in the course of their illnesses. Delayed recognition of substance use disorders in physicians raises concern on a number of levels:

- The prognosis for successful treatment and reentry into practice is improved by early prevention, prior to the development of major medical complications and/or irreversible organ damage.
- The chemically dependent physician's recovery process is smoother and less stressful if treatment begins before serious legal, interpersonal, and professional complications take place.
- Early intervention can be effective in preventing injury to patients, liability to the hospital, and damage to the physician's reputation.



Dr. Ziegler is medical director of the Physicians' Health Programs of the State Society's Educational and Scientific Trust.

With these clear benefits resulting from early detection of problems, why are so many physicians referred only in the advanced stages of addictive disease?

Denial: a case in point

Many different barriers operate within the medical profession to prevent or delay the identification of impairment in practicing physicians. The first and most important of these is *denial.*

Denial is a term used to refer to a collection of psychological mechanisms by which persons with chemical dependency, as well as those close to them, fail to see the reality of what is happening, i.e., the addicted individuals' progressive loss of control and inability to stop drinking or drugging. It can be blatant or subtle, taking the form of rationalization, blaming of other persons or circumstances, etc.

An example of denial in the medical profession involves a 40-year-old married male internist whose drinking has become increasingly out of control over the past few years. For the past six months, in addition to alcohol, he has been using self-prescribed oral opiates (Percocet, Vicodin, etc.) for headaches and back pain, as well as benzodiazepines (Xanax, Halcion) to control insomnia and anxiety. He blames the drinking and pill use on the stress of practice and on his growing marital problems.

At the office, his secretary struggles to reschedule missed appointments and to calm the waiting room full of patients as the physician falls further behind and cannot seem to get to work on time. She also worries about the deterioration in his appearance—he is losing weight, neglecting his grooming, and badly needs a haircut—but she is afraid to say anything. What if he gets angry and fires her? Besides, he is obviously under a lot of stress, and she doesn't want to make things worse.

The two medical assistants are also concerned but are keeping a low profile. They have noticed how he pockets sample drugs, but do not know if they should say anything, even to each other.

The physician's colleagues at the hospital have noticed similar changes but aren't certain what to make of them. They wonder if his haggard appearance and weight loss are related to the marital problems they have heard rumors about. He seems stressed out, always in a rush, never having time to discuss a case or a new procedure. He has become too busy for social activities such as golf or a dinner party. His sense of humor has all but disappeared, and he is frequently irritable and hypercritical.

The nurses are surprised and distressed by the radical change in his personality. As a resident, he had been a favorite of the nursing staff because of his warm, emphatic style of relating and his gentleness with patients. Now he has become distant, abrupt, and impatient, rarely smiling and never laughing. Several times the emergency room nurses have caught a hint of alcohol on his breath at night when he came in to see a patient. They were concerned but weren't willing to fill out a report which might add to his troubles, whatever they were.

One of the pharmacists in town has noticed that, on three occasions, the physician has written prescriptions for controlled drugs for members of his family and has picked up the pills himself. The pharmacist has been taught that this behavior is a "red flag," an indicator of possible drug abuse. However, he has known the physician for years and cannot believe that he, of all people, would abuse drugs. There must be another explanation. Perhaps the doctor's family members do need the medication for pain, anxiety, or insomnia.

At home, the physician's wife is aware that he is drinking too much. She has tried to talk with him about her concerns, but this only results in arguments or his increased withdrawal from her and the rest of the family. She wonders if his need to escape into the bottle is her fault. Perhaps if she were doing a better job of insulating him from the stresses of his professional and family life, he wouldn't need to drink so much. She makes excuses for him in social settings, and takes over more and more of the things he used to do around the house and in the community. She tells no one about her concerns—she is too ashamed and afraid of what could happen to his practice and to the family.

The couple's 12-year-old son, who is a talented tennis player taught and encouraged by his father, has dropped off the tennis team of his junior high school. He has started bringing home Cs and Ds instead of his usual As, and is increasingly hostile and argumentative with his mother. Their 10-year-old daughter's teacher has expressed concern over the child's daydreaming and inattention in class, and has asked if something is wrong at home. At times the children tell their mother that they are afraid of Dad's temper when he has been drinking. They no longer bring friends over to the house.

All of these people are aware that something is wrong. However, each person is using a form of *denial* to avoid directly confronting the truth of the matter. The various forms this denial takes include:

Rationalizing: The behavior is explained by focusing on possible causes for it other than alcoholism/drug addiction. The physician as well as his spouse, staff, colleagues, and children blame his drinking on stress, marital discord, anxiety, insomnia, etc.

Minimizing: Each significant person in the physician's life has convinced himself or herself that the problem is not *that* bad or that it is likely to take care of itself.

Moralizing: Many people have been taught to think of the abuse of alcohol and other drugs as a moral issue, an indication of lack of good character or willpower. In this so-called moral model, good people do not develop the drinking problems or become dependent on drugs. Because they see the physician as a good man, his friends, colleagues, and family members do not believe that *he* could be an alcoholic/addict. They feel ashamed and embarrassed for him, rather than recognizing that he is *sick* and in need of treatment.

Self-blaming: His wife, his secretary, and others believe that somehow they are at fault, that they should be able to control or put a stop to his unhealthy behavior. However, since what they are seeing are the signs of a progressive disease, this is not a realistic expectation.

Other barriers

In addition to denial, there are other barriers to identifying the problem and getting help for the physician. For instance, he is a skilled physician and a kind, caring man. No one wants to do anything to get him into trouble or create a problem where none exists. Also, everyone is afraid →

"No one wants to do anything to get him into trouble or create a problem where none exists. Also, everyone is afraid of how he might react if confronted."

of how he might react if confronted. What if he becomes angry? He might leave the family, fire the staff members, discontinue the friendship, send his referrals elsewhere, or sue someone.

No single individual knows the "whole story," and family members, colleagues, and others are not aware of the signs and symptoms of alcohol and drug addiction. Finally, no one knows the effective way to help a physician who is becoming impaired. Many medical professionals believe that, once a physician gets "hooked" on drugs and/or alcohol, the situation is hopeless—his career is over.

Therefore, everyone continues the struggle to cover up, ignore, compensate for, or explain away the progressive dysfunction—to do all the wrong things for the right reasons—a process known as *enabling*.

"Many medical professionals believe that, once a physician gets 'hooked' on drugs and/or alcohol, the situation is hopeless—his career is over."

A diagnosis of chemical dependency can be made only with a comprehensive evaluation of the physician by a practitioner with special training and experience in addiction medicine and professional impairment. However, several characteristic signs and symptoms can alert colleagues, coworkers, and family members to the likelihood that a problem exists and needs to be address:

- a noticeable change in behavior from previous familiar patterns;
- irritability, angry outbursts;
- deterioration in grooming, hygiene;
- withdrawal from family, community, and professional activities;
- lateness, unexplained absences, missed appointments;
- unavailability, "Locked-Door Syndrome";
- loss of compassion, empathy;
- multiple physical complaints and illnesses; and/or
- poor charting, delinquent records, increased illegibility of handwriting.

In most cases, these signs and symptoms preceed by months or even years the development of more obvious indicators of trouble, such as:

- odor of alcohol on the breath at the office or hospital;
- embarrassing social situations due to intoxication;
- auto crashes, arrests for driving under the influence;
- excessive drug orders for office use, missing samples from office, hospital; and/or
- inappropriate orders, abusive behavior toward patients, staff.

When drug and/or alcohol abuse is suspected in a physician, action must be taken as soon as possible to provide intervention and treatment. The disease of chemical dependency is progressive and potentially fatal without treatment. With appropriate recognition, treatment, and continuing care, physicians have an excellent prognosis for recovery. In most physician health programs, over 85 percent of referred addicted physicians are able to continue or resume practice successfully. Without help, most continue to experience progressive impairment of personal and professional function.

Resources

There are a number of resources available to help physicians who have developed chemical dependency. Many hospitals have or are in the process of developing medical staff health committees which can provide confidential assistance and referral to members of that hospital's staff. Information and assistance may also be available through some county medical societies.

The Physicians' Health Program (PHP) of the State Society's Educational and Scientific Trust assists Pennsylvania physicians in recovering from alcoholism, drug dependency, and other forms of personal and professional impairment. The PHP staff is available to discuss in confidence concerns about a physician who may be experiencing this type of problem. To reach the PHP, call (717) 558-7750.

Since most colleagues, family members, and other concerned persons are not experienced in recognizing and addressing these issues, it is valuable to be able to talk over the details with a professional who can help to assess the information and discuss options for effective intervention.

NEW RETIREMENT PLAN LIMITS CALL FOR TIMELY PLANNING

The 1993 Revenue Reconciliation Act recently passed by Congress includes a new retirement plan limit that reduces the limit on an individual's compensation for determining the plan contribution for his or her benefit. The new, lower limit means that many doctors must decide whether or not to increase their funding percentages in order to continue putting into retirement savings the maximum amount permitted each year.

The old limit of $235,840 allowed many doctors to reach the maximum $30,000 allocation in a single defined contribution retirement plan (typically a profit-sharing plan) by funding at a level just over 12.7 percent of pay. "Integrating" a plan with Social Security meant that lower-paid employees could be funded at lower levels of around eight percent of pay.

Now, with the maximum contribution based on $150,000 of compensation, a practice must increase its contribution percentage to reach the same contribution of $30,000. In most plans, (again "integrating" with Social Security) this means increasing the staff funding percentage to approximately 16 percent of pay.

Planning for 1994

The $150,000 limitation takes effect for plan years starting in 1994, so now is the time to analyze your contribution situation. According to the law, changes made throughout the year are considered effective as of January 1994, as long as they do not result in a reduction or cut-back of existing benefits. However, should you elect to increase funding levels, you will need sufficient time to amend your practice retirement program, provide the required notices to your employees, and satisfy other requirements mandated by retirement plan and tax laws.

Many practices will actually need to set up a second retirement plan if they are now maintaining just one plan. The decision of what course to take can be made by comparing the increased staff costs if the plan is fully funded with the income taxes on the money if the extra dollars are paid to the doctor(s) in the form of additional salary/bonus.

Consider the options

Consider, for example, a group of three physicians, each earning over $200,000 and maintaining a single profit-sharing plan. Based on the new compensation cap of $150,000, the maximum amount that may be funded into the plan for each doctor is $22,500 (15 percent of $150,000). Assume that the practice maintains a staff of six employees who are paid compensation totaling $120,000, and that before the change in the law, it cost $9,600 in staff contributions in order to contribute $30,000 for each doctor. The doctors now need to decided whether it makes sense for the practice to pay another $9,600 (8 percent) in staff funding so that each doctor can continue to contribute at the $30,000 level.

The chart below illustrates the options of increasing funding versus no increase at all. In this example, increasing the funding percentage is clearly advantageous. By keeping the percentage equal to the percentage level before the change in the law, each doctor would pay an extra $4,494 in tax. This is based on a combined federal and state rate of 42 percent on the extra salary/bonus.

However, by increasing the funding percentage, the extra cost per doctor for staff funding is only $3,200 (total extra funding of $9,600 divided by three). Even by doubling the staff funding percentage, the physicians are still ahead of the game tax-wise—$4,494 per doctor versus $3,200 per doctor.

Two additional factors support the decision to increase the funding percentage. One is that earnings in the plan compound on a tax-deferred basis—if the extra dollars are taken as salary/bonus and invested in taxable vehicles, tax deferral is lost. The second is the intangible benefit that the doctors create by increasing the staff retirement percentage (employee "goodwill").

Each practice's retirement program obviously needs to be analyzed on an individual basis. In some cases, depending on the goals of the practice's owners, the size of the staff payroll, and the amounts already accumulated for retirement by the doctors, it may be advantageous to maintain current levels of funding percentages. Before making any major changes, be sure to review these issues and examine your specific circumstances with your retirement plan advisor.

The contributing author, Joseph W. Gallagher, JD, LLM, is an attorney with The Health Care Group, a practice management consulting firm based in Plymouth Meeting.

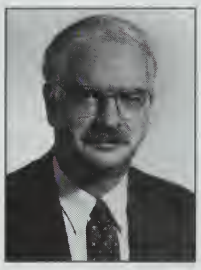
1994 SPRING ASSEMBLY

BUILDING ALLIANCES, COPING WITH THE FUTURE

Two years into the health system reform debate, we are still uncertain what the future holds for physicians and their patients. To prepare members to more effectively participate in the ongoing reform debate and cope with coming changes, the Society's annual Spring Assembly will focus on "Forging Alliances...Assuring Your Future." The assembly will be held April 19 and 20, 1994, at the Harrisburg Hilton and Towers.



Dr. Corlin

The Society's Spring Assembly Committee has scheduled a number of nationally known speakers to address the theme. Richard F. Corlin, MD, vice speaker of the AMA House of Delegates and immediate past president of the California Medical Association, will explore the future of health care in the keynote address. According to the committee, Dr. Corlin was chosen to open the assembly, because: "To plan for the future, we must first have a better idea what the future holds in store."

Dr. Corlin's perspective is based on his own experience as a practicing gastroenterologist and from insights gained through his national medical leadership role. His participation at the Forum on Health System Reform at the Society's 1992 Annual Business Meeting was well received.

A high-ranking official in the Clinton administration—promised by the Democratic National Committee—will then discuss the future of health system reform as seen by the White House, and Jennifer James, PhD, a cultural anthropologist, will discuss ways physicians confront and respond to change.

Thomas M. Reardon, Esq., one of the most popular presenters at last year's Leadership Conference, will conclude the afternoon with "Alliances with Health Care Professionals." Reardon, who works with Mintz, Levin in Boston, will discuss his experiences in assisting physicians in developing relationships with hospitals, financing entities, and other physician groups.

Following the formal presentations, physicians will have the opportunity to meet in smaller groups with Dr. Corlin and the other speakers for questions, discussion, and debate.

Tools for building alliances

Keeping with the themes of building alliances and assuring the future, the Spring Assembly is offering "Tools for Building Alliances" through six workshops scheduled Wednesday morning. Workshops include:

- "Computers Made Easy"—An overview the basics of personal computers and the growing role PCs are playing in the health care system.
- "PHO...Friend or Foe?"—"Nuts and bolts" considerations and ramifications of establishing various medical staff networks.
- "Financial Planning in the Changing Environment"—Designed for HMSS representatives and young physicians, focuses on repayment of educational debts, buying a home, buying insurance, establishing an investment plan, and saving for retirement.
- "Winning Approaches to Your Legislator and the Public"—Practical information and training on how to be more effective when talking to elected government officials and the public.
- "Difficult Decisions for Patients and Their Families"—How to talk to patients and their families about medically futile care and other ethical considerations raised by health system reform.
- "Contracting with Managed Care Organizations"—An overview of what physicians should ask for when entering into contractual arrangements.

To register

Deadline for registrations is March 18. Registration fees are: $65 for Society members, $30 for residents, and $100 for nonmembers; medical students may register free of charge. Participants are eligible for 7.5 hours of Category 1 continuing medical education (CME) credit. For registration materials and information, call the Society's Department of Member Communications at (800) 228-7823 or (717) 558-7750.

CLINICAL DECISION MAKING FOCUS OF HMSS SEMINAR

How do physicians and hospital medical staffs remain competitive in an era of downsizing, managed care, and prospective reimbursement? How can they demonstrate quality results and still keep their practices and hospital lean, yet retain the rewards of improved efficiency?

Those are the questions the new, half-day seminar, "Improving Cost-Effective Clinical Decision Making," will answer the evening before the Society's Spring Assembly.

Hospital medical staff leaders—including physicians directing quality assurance, utilization review, risk management, and cost containment—are invited to attend this train-the-trainer experience in which participants will receive materials and skills to help them train their own medical staffs in the most efficient use of hospital resources.

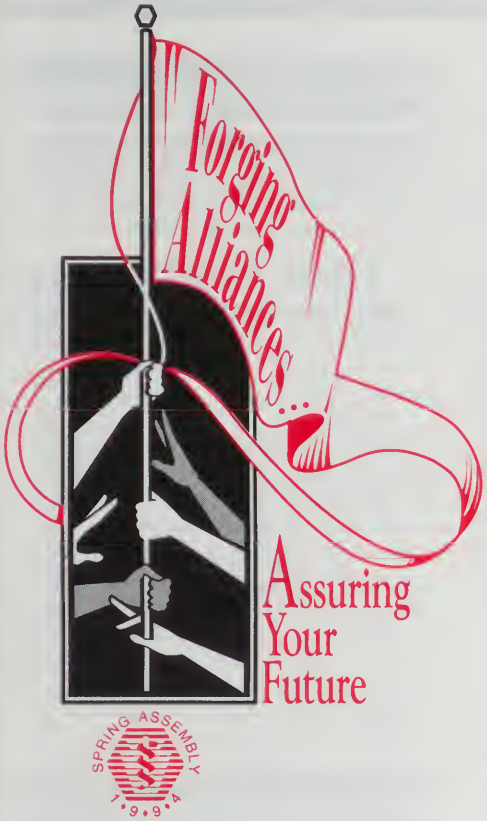
Speakers will include:

- Toni M. Casale, DO, director of outcomes and assessment, Philadelphia College of Osteopathic Medicine, Philadelphia;
- Lee H. McCormick, MD, chairman, of the AMA-HMSS;
- David B. Nash, MD, MBA, director of health policy and clinical outcomes, Jefferson Medical College, Philadelphia; and
- David J. Shulkin, MD, director of clinical outcomes assessment and quality management, University of Pennsylvania Medical Center, Philadelphia.

The seminar—cosponsored by the Society's HMSS and The Scientific and Educational Trust's Institute for Physician Leadership, and supported in part by an educational grant from the Upjohn Company—begins at 4:00 p.m. on April 18 at the Hilton and concludes at 8:00 p.m. Four hours of Category 1 CME credit have been requested.

The cost of the seminar, which includes the evening meal, is $130 for Society members and $165 for nonmembers. Medical staffs and hospitals are eligible for group discounts when more than one physician attends from the same hospital or health care organization.

For further information, call (800) 228-7823, extension 461. Registration deadline is March 31.



Pennsylvania Medical Society

Spring Assembly April 19-20, 1994

Harrisburg Hilton and Towers

Tuesday, April 19

8:30 a.m.-11:30 a.m. ***Society–HMSS 20th Assembly Meeting***

11:30 a.m.-1:30 p.m. ***HMSS–Spring Assembly Joint Luncheon***

Keynote Address: **Richard F. Corlin, MD**

This portion of the program is supported in part by a grant from the Raymond C. Grandon, MD, and Doris N. Grandon Fund of The Educational and Scientific Trust of the Pennsylvania Medical Society.

Plenary Sessions

"What is the Future of Health System Reform?"

"Dealing with the Future", Jennifer James, PhD, cultural anthropologist

"Alliances with Health Care Professionals", Thomas M. Reardon, Esq., of Mintz, Levin, in Boston

Break-Out Sessions

6 p.m. ***Reception***

7 p.m. ***PAMPAC Dinner***

Entertainment by the popular Capitol Steps, former Capitol Hill employees whose witty send-ups of Washington people and events have been showcased in three national television specials, eleven albums, and 300 performances a year throughout the United States.

Wednesday, April 20

7 a.m. ***Breakfast*** **Martin A. Murcek, MD:** President's Address

Presentation of the first annual Pennsylvania Medical Society Physician Volunteer Award

8:15 a.m.-noon ***Workshops—Tools for Building Alliances (Choice of 3)***

Computers Made Easy: A discussion of the basics of personal computers and the growing role PCs are playing in the health care system, presented by Edward H. Dench Jr., MD, of the Society's Board of Trustees.

PHO . . . Friend or Foe? Developed in cooperation with the Hospital Medical Staff Section Governing Council and presented by KPMG Peat Marwick.

Financial Planning in the Changing Environment: Presented by AMA Investment Advisors, Inc.

Winning Approaches to Your Legislator and the Public: Practical information and training on how to be more effective when you talk about health system reform and other issues with your elected government officials and with the public.

Difficult Decisions for Patients and Their Families: Stuart Youngner, MD, will discuss how to talk to patients and their families about medically futile care and other ethical considerations raised by health system reform.

Contracting with Managed Care Organizations: Alice G. Gosfield, Esq., a health care law specialist from Philadelphia and a popular speaker at past Society meetings, discusses what physicians should ask for when entering into contractual arrangements.

The Pennsylvania Medical Society is accredited by the Accreditation Council for Continuing Medical Education to sponsor medical education for physicians.

The Pennsylvania Medical Society has designated this continuing medical education activity for 7.5 hours in Category 1 of the Physicians Recognition Award of the American Medical Association and the Pennsylvania Medical Society membership requirements.

All faculty participating in continuing medical education programs sponsored by the Pennsylvania Medical Society are expected to disclose to the program audience any real or apparent conflict(s) of interest related to the content of their presentation(s).

See the March issue of* Executive Report *for the registration form!

SOCIETY'S ANTI-SMOKING EFFORTS RECOGNIZED

The Society continues its partnership in the Pennsylvania Department of Health's Youth Against Tobacco (YAT) campaign, which encourages teenagers not to smoke by asking them to take a pledge and providing them with anti-smoking information. Other partners in the program include the state Department of Education and the state chapter of the American Cancer Society.

During the 78th Annual Pennsylvania State Farm Show in Harrisburg in January, Society staff volunteers served at a YAT informational booth, where tens of thousands of promotional buttons, posters, and other materials were distributed, and thousands of young people signed pledges not to use tobacco products.

Statewide, campaigns have been conducted by more than 150 organizations, including schools and youth organizations, in 45 of the state's 67 counties. Currently, television and radio spots are being aired to promote teenage anti-tobacco behaviors.

In addition, project materials have been requested by people in Ireland, Africa, and Canada, and in New York, New Jersey, Maryland, the District of Columbia, Virginia, Florida, and West Virginia. The materials have also been shared with the Centers for Disease Control and Prevention.

The project has been recognized by numerous organizations: It was presented at the fall 1993 annual meeting of the American Public Health Association in San Francisco, and the radio "rap" commercial won first place in the Central Penn Ad Federation ADDY competition and received a 1993 Gold Excellence Award for a radio public service announcement from the National Public Health Information Coalition for Communications.

For more information about the program or the Society's involvement, call the Division of Communications and Public Affairs at (800) 228-7823 or (717) 558-7750.

NEW MANAGED CARE SYSTEM FORMING IN PHILADELPHIA

Graduate Health System and Independence Blue Cross, both in Philadelphia, have agreed to merge their for-profit operations into a new managed care subsidiary under Independence Blue Cross.

According to Independence Blue Cross President G. Fred DiBona Jr., "The result will be the creation of a vertically integrated delivery system offering a comprehensive package of health care benefits in a managed care environment which delivers quality care at the best price possible." He adds that the only "real way" to control costs and assure quality is "at the point of service delivery by providers and practitioners."

Graduate Chairman and Chief Executive Officer Harold Cramer says the proposed merger is a "logical" move for the health system, which currently includes seven hospitals, an HMO, and other health businesses. He explains the merger will expand services available to Graduate patients, while allowing them to stay within the Graduate system.

The *Philadelphia Inquirer* reported that the proposed system "closely mirrors many of the reforms envisioned by the Clinton health plan." But DiBona says, "Aside from whatever may happen in Washington or Harrisburg, health care reform in the private market is happening now."

COUNTY NEWS

Pat Myers (left) and Brigitte Davidson (right) were two of 75 participants at a living will seminar sponsored recently by the Montgomery County Medical Society (MCMS). The seminar emphasized that a living will "ensures you dignity if you are ill, can speak for you when you cannot, and can save you and your heirs money." Statistics show that approximately 80 percent of Pennsylvanians do not have a living will. Also pictured in the middle (left to right) are seminar speakers Leonard Frank, MD, and Barbara Zulich, Esq.

MEDICAL SCHOOL NEWS

WOMEN'S HEALTH MEDICAL EDUCATION GROUP FORMED

The Medical College of Pennsylvania (MCP), Philadelphia, and the American Medical Women's Association (AMWA) have joined forces to create the National Academy on Women's Health Medical Education, the first group nationally to focus specifically on women's health in medical education.

The mission of the academy is "to blend women's health into every facet of medical education from medical student teaching, to the residencies, to the halls of academia, and to physicians already in practice." The group will "propose strategies and analyze their effectiveness with two goals in mind: 1) the successful inclusion of women's health education into the majority of medical school and residency curricula; and 2) the consequent delivery of appropriate, high-quality health care to all women."

Leaders from other medical schools and organizations with interest or expertise in women's health and women's history have been invited to join the academy, which will hold its first meeting on March 21 at MCP. For further information, call (215) 842-4522.

SPECIALTY SOCIETY NEWS

ORTHOPEDIC SOCIETY PLANS SPRING MEETING

The Pennsylvania Orthopedic Society will hold its Spring 1994 meeting, "Total Knee Arthoplasty: Advances, Complications, and Outcomes," on April 20-23 at the Boca Raton Resort and Club, Boca Raton, Florida. The meeting offers 12.5 hours of Category I CME credit. For more details or to register, call (717) 558-7750, extension 447.

OTOLARYNGOLOGISTS TO DISCUSS SCIENTIFIC ISSUES

Physicians are invited to attend the annual scientific meeting of the Pennsylvania Academy of Otolaryngology-Head and Neck Surgery to be held June 16-18, 1994, at the Hotel Hershey.

Fred J. Drucker, MD, professor and chairman of otolaryngology-head and neck surgery, Louisiana State University Medical Center,

Shreveport, Louisiana, will be the guest of honor. In-depth panels will focus on facial plastic and reconstructive surgery and surgery of the thyroid and parathyroid glands. For further information, call Al Walter at (610) 775-3298.

REFORM, CLINICAL TOPICS FOCUS OF ALLERGY MEETING

Allergists will have the opportunity to discuss health system reform at the Pennsylvania Allergy Association's 46th Annual Meeting, scheduled the mornings of June 24-26, 1994, at the Hotel Hershey. Clinical topics to be covered include upper airway, asthma, immunotherapy, anaphylaxis, and food allergies.

The association has applied for 12 hours of Category 1 CME credits for the three-day program. A registration fee of $150 will be charged to nonmembers. For more information, call (717) 558-7750, extension 468.

ALLIANCE NEWS

AMA REP TO DISCUSS REFORM AT PMSA CONFLUENCE

AMA Vice President of Legislative Affairs Ross Rubin, JD, will discuss health system reform at the Pennsylvania Medical Society Alliance (PMSA) confluence, to be held April 12-15, 1994, at Toftrees Hotel Resort and Conference Center, State College.

Mr. Rubin, who has been with the AMA since 1976, is responsible for federal legislation and AMA Council on Legislation activities. He will offer an overview of current reform activities, as well as AMA positions on reform.

Also scheduled:

- Patricia Dolence, an interaction consultant from Johnstown, will present "Understanding People and Predicting Their Behavior," a two-hour seminar offering ideas to get people to work together, minimize potential conflicts, recognize "motivators/satisfiers," convey messages essential to gaining cooperation, and realize the full impact of nonverbal communication.
- Timothy Murphy, PhD, a clinical psychologist from Pittsburgh, will discuss TV violence.
- William J. Evans, PhD, director of the Noll Laboratory for Human Performance Research, and professor of nutrition and applied physiology, Penn State, State College, will present, "Beating the Clock: Can We Slow the Aging Process with Exercise."
- Eileen Plundo, RN, a clinical case manager from Greensburg, will discuss managing the physician's office in today's environment.

For additional program or registration information, call PMSA at (800) 228-7823.

PMSLIC ISSUES SEMI-ANNUAL CLAIMS STATISTICS REPORT

The Pennsylvania Medical Society House of Delegates Resolution 86-17 requires that the Pennsylvania Medical Society Liability Insurance Company (PMSLIC) report certain claims statistics to the House of Delegates on a semi-annual basis.

In response to this resolution, PMSLIC published the first semi-annual report in the September 1987 PENNSYLVANIA MEDICINE. The data included in the following tables is an update of PMSLIC's claims experience as requested by the resolution. →

TABLE 1: Number of cases in which a physician is joined as an additional defendant by a hospital or physician

Since beginning tracking joinder data on April 7, 1987, 119 PMSLIC insureds were joined by other parties through December 1993, as follows:

PMSLIC Insured Joined By:	Number of Times:
Hospital	56
Other Physician	30
Nursing Home	3
Commercial Business	5
Plaintiff	4
Pharmacy/Pharmacist	9
Manufacturer	1
Drug Company	3
Other	8
TOTAL	**119**

During the same period, PMSLIC joined 21 other parties, as follows:

Party Joined By PMSLIC:	Number of Times:
Hospital	2
Physician	10
Drug Company	1
Manufacturer	4
Other	4
TOTAL	**21**

TABLE 2: Number of claims and suits filed by specialty from January 1, 1978-December 31, 1993*

Specialty	Total Claims and Suits	Specialty	Total Claims and Suits
Allergy	18	Pathology	48
Anesthesiology	447	Pediatrics	400

** Claims and suits filed during this period resulted from policy years 1978-1993. PMSLIC's limit of liobility is $100,000 per incident for policy years 1978-1982, $150,000 for 1983, and $200,000 for 1984-1993.*

Keep in mind thot the specialty totols are affected in part by the number of PMSLIC insureds in each speciolty. In oddition, some speciolties are relatively new rating classifications and were not in existence for the entire time period represented.

Please note: Though previous reports have included only five years of claims, to more accurately reflect PMSLIC's experience, the tables are being expanded this year to include all claims and suits indexed against PMSLIC insureds since the company's inception in 1978.

Table 1 (page 45): Joinders—includes PMSLIC physicians joined by other parties and other parties joined by PMSLIC.

Table 2 (page 45): Number of claims and suits filed by specialty, January 1, 1978, to December 31, 1993.

Table 3 (above): Cost of claims and suits filed by specialty, January 1, 1978, to December 31, 1993.

Direct any questions or comments about this material to Jane L. Conley, Director of Medical Research and Statistics, PMSLIC, P.O. Box 8375, Harrisburg, PA 17105-8375, (717) 558-7500, extension 501.

QUARTERLY REPORT OF HOUSE AVAILABLE

In accordance with Resolution 92-27 of the House of Delegates, the quarterly report on actions of the House is now available from the State Society. The report is provided to members to enable them to respond to and participate in upcoming House activities. To request a copy, call (800) 228-7823, extension 403.

SOCIETY COMMENTS ON DPW MANAGED CARE PLAN

The State Society recently outlined some reservations voiced by physicians regarding a proposed managed care plan for Philadelphia and the five surrounding counties. The comments were sent in late 1993 to the Pennsylvania Department of Public Welfare (DPW).

According to the December 11, 1993, issue of *Pennsylvania Bulletin*, the new managed care program is designed to replace the Health Insurance Organization (HIO) plan previously in place in the Philadelphia area, and would be implemented in October 1994. The proposal creates three separate "districts," splitting Philadelphia and aligning each of the areas with adjacent counties. State-licensed health maintenance organizations (HMOs) could bid to be a certified plan for the districts, and DPW could approve between two and six plans to operate within each district.

The Society supports the basic goal of the program—pairing Medical Assistance (MA) patients with primary care physicians for coordination and management of health care. However, the Society is concerned that "access to quality health care may be less available to the MA patients as a result of these initiatives."

The letter also states that "any initiative that discourages physicians from participating by increasing paperwork or interrupting the patient-physician relationship will not succeed." Instead, we believe more could be accomplished in encouraging physicians' participation by DPW initiatives such as adoption of a uniform claim form.

Further, the Society said the department "failed to involve [interested] parties in a meaningful dialogue during the planning stages" of the program, and requested "a more open involvement" of all parties—the MA patient, physicians and other health care providers, insurers, elected representatives, etc.—in the design and implementation of the program.

Among other areas of concern were plan marketing, medical service, provider enrollment, quality assurance, and utilization management issues. The Society is continuing dialogue with the department to further discuss specifics and will react to the request for proposal when it is circulated.

PETITION FILED FOR SINGLE STATEWIDE CHARGE LOCALITY

At the direction of the 1993 House of Delegates, the State Society in early February filed a petition with the Health Care Financing Administration (HCFA) requesting a single statewide charge locality for determination of Medicare payments to physicians.

HCFA has said it will consider changing a multi-locality state, such as Pennsylvania, to a statewide locality only if there is "overwhelming support" among state physicians. To date, only five states have been converted to a statewide locality; four states' petitions have been denied for lack of overwhelming support. The Society has received numerous letters—including copies of letters addressed to HCFA—from county societies, specialty societies, individual physicians, and others. Some support the move, and others oppose it.

Timeline

The Office of Payment Policy (OPP), the unit within HCFA responsible for reviewing statewide locality petitions, has advised the Society that the federal rule-making process applies to petitions for a statewide charge locality, and released the following timeline:

- An approved petition with information required by OPP (includes formal state medical society request, House resolution with vote count, list of number of actively practicing physicians in state by county and number that are state society members, and letters of support from local societies representing physicians who will experience decrease in reimbursement under proposed change) must be submitted to HCFA by early February 1994.
- If the petition fulfills all of OPP's requirements, the request for a statewide charge locality will be published as a proposed rule in the *Federal Register* in Spring 1994—with a 60-day public comment period.
- Once comments are reviewed, a decision will be made by OPP (for HCFA) as to whether a final rule will be published.
- A final rule would be published in Winter 1994, if HCFA decided to implement a statewide locality. HCFA has advised that the earliest implementation date is January 1995.

Watch for updates on movement of the petition throughout 1994. Direct any questions on the issue to the Society's Department of Medical Economics at (800) 228-7823 or (717) 558-7750.

EFFORTS CONTINUE TO RESOLVE MEDICARE ISSUE

The Society continues efforts to resolve the Medicare clinical laboratory overpayment refund demand from Pennsylvania Blue Shield.

In early September 1993, approximately 1,600 physicians and labs were informed that they had been overpaid for outpatient clinical lab services under Medicare and that they had to refund the excess amounts. The Society immediately objected to the demand, which included a 13.635 percent interest rate to be imposed on amounts not paid within 30 days, and was successful in efforts to have the Health Care Financing Administration (HCFA) place a hold on the situation.

Currently, the Society is working with the AMA and other states involved to resolve the situation. The AMA House of Delegates adopted a resolution at its December interim meeting which addressed protection of physicians in similar situations.

CHAMPUS LIMITS BALANCE BILLING FOR NON-PAR DOCS

As of January 1, physicians who do not participate in the Civilian Health And Medical Program of the Uniformed Services (CHAMPUS) are limited to how much they can bill CHAMPUS patients. The program is the U.S. Defense Department's health benefits plan for military families who receive medical care from civilian hospitals and doctors.

According to the Department of Defense Appropriations Act of 1993, physicians who do not participate in the program may bill CHAMPUS patients no more than 115 percent of the CHAMPUS allowable charge for a particular service.

Providers who do not comply with the limit on charges could lose their status as authorized providers of care under the Defense Department program.

Third Annual

Family Physicians' Approach to Clinical Problems

August 17-20, 1994

Hidden Valley Resort, Somerset PA

A unique program presented by Family Practitioners. Family Physicians learning from Family Physicians.

Presenters include:

- **James E. Hocutt, Jr., M.D.** Family physician who has successfully incorporated procedures into office practice will provide a workshop on skin cryosurgery and lecture on choosing procedures for the office.
- **William Brandon, M.D. MPH.** HIV Training Director for the state of Louisiana
- **Mark Johnson, MD.** Chairman, Dept. of Family Medicine, New Jersey Medical School will speak on management of Hypertension
- **Marian Stuart, Ph.D.** Co-author of T*he Fifteen Minute Hour: Applied Psychotherapy for the Primary Care Physician*
- **Janelle Goetcheus, MD.** AAFP Family Doctor of the Year 1991
- **Richard G. Roberts, MD., JD.** Member, U.S. Dept. of Health & Human Services, AHCPR Clinical Guidelines Panel for Management of BPH

• • • • • • • •

Plus workshops and lectures on childhood sinusitis, colposcopy, myofascial techniques, diabetic ketoacidosis, recognizing incest, sports medicine, breast cancer and many other topics.

Located in the beautiful Laurel Highlands of Pennsylvania.

HCQII: Local Cooperative Projects

Donald E. Harrop, MD

Last month, we discussed the major sources of cooperative projects under the Keystone Peer Review Organization's new Health Care Quality Improvement Initiative (HCQII). In this installment of our review of HCQII components, we go one step further, focusing on local PRO-initiated cooperative projects.

As we continue to look at the various components of the Health Care Quality Improvement Initiative (HCQII), it becomes clear that the success of this new peer review organization (PRO) direction depends upon how well cooperative projects are designed, developed, and completed. Of the two types of cooperative projects—local PRO-initiated and national—the major focus is on the local projects. Each PRO will analyze its own state data, plan the projects, initiate the necessary action, and measure the outcomes of the projects which result from PRO and provider collaborations.

Of course, these projects are conducted in accordance with guidance and requirements provided by the Health Care Financing Administration (HCFA). Because there has been little or no prior in-depth experience with a quality improvement program of this complexity, it is expected that the HCFA rules and requirements may change continuously as PROs gain experience, and provide feedback to HCFA central and regional offices.

As we discussed in last month's article, there are numerous sources of subjects for cooperative projects. The data analysis conducted by the PRO in the early stages is vital because lack of identification of aberrant patterns could cause an otherwise significant subject to be scrapped. Even subtle variations in the data must be recognized if the PRO is to develop meaningful projects.

It is also extremely important that during the designing of the project, provider input is incorporated as early as possible. This is essential since potential obstacles to implementation of action plans need to be addressed during the development stage. This allows the PRO to gain the willing participation of the providers and to refine the data analysis. It also facilitates acceptance of analytic results when presented to the providers.

Each project developed should address important issues in quality of care, utilization of services, and accuracy of data, and should have the potential to improve performance. It is a HCFA requirement that at least 50 percent of all cooperative projects must focus on quality issues.

"Each project developed should address important issues in quality of care, utilization of services, and accuracy of data, and should have the potential to improve performance."

Stringent statistical methods are employed when analyzing data, measuring outcomes, and determining sample size. The intended result is to identify possible clinical issues causing the variations, rather than merely establishing statistical explanations. The bottom line is to modify provider behavior if necessary, in a cooperative manner, in those situations where less than desirable outcomes have been routinely occurring.

The Keystone Peer Review Organization's first cooperative project should be completed this month. Another six PRO-initiated projects were in various stages of development at press time.

Dr. Harrop is president of the Keystone Peer Review Organization.

Commission Seeks Support for High-Quality School Health Education

The Society's Commission on Public Health is undertaking a project designed to assure that every child in Pennsylvania receives the benefits of a comprehensive, high-quality health education.

The Society's House of Delegates called for a mandate in Pennsylvania requiring all schools in the commonwealth to provide this to all students. The commission—realizing that Pennsylvania is not yet ready to accept such a mandate—plans to address the issue locally throughout the commonwealth.

In cooperation with the Pennsylvania School Health Education Coalition, the commission plans to encourage physicians and others to ask questions about the programs that exist in the schools in their communities. Through other coalition members, such as the American Cancer Society and the Pennsylvania PTA, the commission can provide contacts for like-minded individuals in the physician's community.

Also, the coalition is preparing a folder of information that includes a model school health program, information on education standards in Pennsylvania, how the school systems work, and information on coalition building.

The commission hopes that informal contacts between individuals will result in the creation of local coalitions dedicated to assuring that the schools in their communities provide quality, comprehensive health education to all students.

To be placed on the mailing list for additional information and the names of contacts in your area, call the Society's Department of Educational and Scientific Affairs at (800) 228-7823 or (717) 558-7750.

Thousands of children in Central Pennsylvania qualify for free health care benefits.

Do yours?

Call 1-800-KIDS-101

If you, or someone you know, have children who are not insured, they may qualify to receive free health benefits through a special program called BlueCHIP℠ of Pennsylvania.

BlueCHIP is funded by the Commonwealth of Pennsylvania and administered by the Caring Foundation of Central Pennsylvania, an affiliate of Capital Blue Cross and Pennsylvania Blue Shield. We believe all children deserve access to quality health care. And our goal is to provide regular preventive care, check-ups and immunizations to children who really need them. So they'll be healthy now, and in the future.

Dr. Sirio

Dr. Casale

The Pennsylvania Medical Society Board of Trustees has appointed **Carl A. Sirio, MD**, Pittsburgh, as the Society's additional delegate to the Pennsylvania Health Care Cost Containment Council (PHC4) Data Systems Committee. Also, the board appointed **Toni S.M. Casale, DO**, Camp Hill, as additional delegate to PHC4's Education Committee.

Jody R. Piltz, MD, ophthalmologist, Scheie Eye Institute, Philadelphia, was awarded a $750,000 grant by the National Eye Institute of the National Institutes of Health. The grant supports an eight-year study to determine if medicine to reduce intraocular pressure will prevent or delay the onset of glaucoma damage in eyes with elevated intraocular pressure.

R. Barrett Noon, MD, director of surgery and chief of the service of plastic surgery, Bryn Mawr Hospital, was named a governor of the American College of Surgeons.

Lila Stein Kroser, MD, Philadelphia, was appointed to the Committee on Finance and Insurance of the American Academy of Family Physicians.

Kat Kolaski, MD, was appointed director of pediatric rehabilitation, Children's Rehabilitation Hospital, Philadelphia.

Penn State's College of Medicine at The Milton S. Hershey Medical Center and Lehigh Valley Hospital, Allentown, have signed an affiliation agreement to establish a formal relationship between the two health care institutions for the purpose of medical education, clinical research, and patient care.

The American Medical Writing Association awarded **H. Michael Zal, DO,** Bala Cynwyd, the Frances Larson Memorial Award for his article, "When Fatigue is Chronic," which appeared in the June 1992 issue of *Family Practice Recertification*.

Herbert E. Mandell, MD, Wyncote, chief of child adolescent psychiatry, Albert Einstein Medical Center and Belmont Center for Comprehensive Treatment, Philadelphia, has been elected president elect of the Regional Council of Child and Adolescent Psychiatry of Eastern Pennsylvania and Southern New Jersey.

Robert W. Colman, MD, director, Sol Sherry Thrombosis Research Center, Temple University School of Medicine, Philadelphia, received the Distinguished Career Award from the International Society on Thrombosis and Haemostasis.

Victor M. Bove, DO, chief of clinical services, Wernersville State Hospital, has been inducted as a fellow of the American College of Physician Executives.

Penn State's Milton S. Hershey Medical Center has named **Bruce H. Hamory, MD,** associate dean for clinical affairs.

Dr. Axelrod

Lawrence S. Axelrod, MD, was appointed medical director of both Moyer Packing, Souderton, and Fleer, Inc., Philadelphia.

David J. Eskin, MD, chief of staff, Abington Memorial Hospital, has received the 1993 Frobese Day Award in recoginition of his distinguished service and contribution to furthering medical education at the hospital.

Herbert E. Segal, MD, previously principal clinical coordinator/ corporate medical director, KePRO, was appointed executive vice president of operations and medical affairs at CHP-The Medical Group, New Hyde Park, New York.

Barry W. Rovner, MD, director, Wills Geriatric Psychiatry Program, Wills Eye Hospital, Philadelphia, was named among the country's "Best Mental Health Experts" in the February 1994 issue of *Good Housekeeping*.

March 30 is

DOCTORS' DAY

Join the celebration!

Doctors' Day recognizes the dedication and healing work of physicians and their significant medical, scientific and humanitarian contributions.

The day was first celebrated on March 30, 1933, by the Auxiliary of Georgia's Barrow County Medical Society, commemorating the day in 1842 when Crawford W. Long, M. D., first used ether anesthesia in surgery.

The Georgia native graduated from medical school at the University of Pennsylvania, Philadelphia.

The red carnation is the symbol of Doctors' Day, celebrated nationally.

CASE REPORT

UNUSUAL PRESENTATION OF ROCKY MOUNTAIN SPOTTED FEVER

Maurice J. Lewis, MD, FACP

A 25-year-old, white female presented with a four-day history of marked left occipital, posterior cervical, and auricular tender lymphadenopathy, one week after sustaining a tick bite to the left parietal area, where a small papule was subsequently noted. Constitutional symptoms started on day five of the illness and progressed over the next 48 hours to high fever, diffuse myalgias, nausea, vomiting, chills, headache, photophobia, and a macular eruption which progressed from the trunk to the extremities, including the hands and feet. She became progressively obtunded, but, on admission, was not shocky. There was no other significant lymphadenopathy. She responded to intravenous Doxycycline over the next five days, Rocky Mountain spotted fever IgG and IgM antibodies rising from less than 1:64 to greater than 1:1024 and 1:320 respectively over a two-week period. Recovery was uneventful.

Rocky Mountain spotted fever is unusual in Pennsylvania, seven cases out of 289 nationwide having been reported in the past year, four of 628 in 1991.[1,2] Some of these cases reflected travel to more endemic areas, e.g., South Atlantic and South Central States. Our case gave no history of such travel.

What is even more unusual is the presentation of marked regional lymphadenopathy several days prior to onset of constitutional symptoms. Although mild generalized lymphadenopathy may be present in up to five percent of cases within the first three days of illness,[3,4] there is no evidence in the literature of marked regional lymphadenopathy as a presenting complaint, spread probably being more commonly hematogenous rather than lymphatic, as demonstrated by the presence of rickettsia in the endothelium of small vessels.[5] In addition, Rocky Mountain spotted fever usually starts with an abrupt onset of constitutional symptoms followed by an exanthem starting on the extremities, progressing centripetally to the trunk. In only 10 percent of cases does the eruption start centrally.

As previously emphasized, one must be continually aware of atypical features both in presentation and epidemiology.[6] Since its first description among residents of the Bitter Root and Snake River Valleys of Montana and Idaho in the past century, the diagnosis of Rocky Mountain spotted fever has been based solely on clinical judgment. Only here rests the cure of this potentially fatal disease.

For additional information, call Maurice J. Lewis, MD, FACP, at Freedman, Kaneson & Lewis Associates, (717) 761-3875.

MEDICAL ABSTRACT

LIVER PACKING FOR UNCONTROLLED HEPATIC HEMORRHAGE AFTER TRAUMA

Michael A. Erdek, MD;
Sheldon Brotman, MD

OBJECTIVE: Liver packing is an option for the surgeon faced with hepatic hemorrhage as a function of traumatic injury. Originally popularized in the early 1900s, liver packing was condemned towards the middle of this century after World War II. However, it has been reevaluated in certain situations of hepatic trauma. This case report details the use of liver "sandwich" packing for uncontrolled hemorrhage.

METHODS: A 38-year-old male victim of a motorcycle accident was presented to the emergency department with a blood pressure of 90 mmHg/palpable and a hemoglobin of 6 gm/dl. An exploratory laparotomy revealed a large liver laceration and profound hemorrhage.

A "sandwich" technique of liver packing—where tamponade of the hemorrhage is achieved by placement of packs both above and below the liver bed, causing an effective compression of the liver—was employed to prevent patient mortality in the face of exsanguinating hemorrhage and multiple transfusions.

RESULTS: The patient made an uneventful postoperative recovery. Two weeks after his initial injury, he was stable enough for transfer out of the intensive care unit; a week later he was judged fit for transfer to a rehabilitation unit.

CONCLUSION: Massive liver hemorrhage after blunt trauma may be uncontrolled by conventional means. Failure to achieve hemostasis requires multiple transfusions and further worsens the coagulopathy already existent due to liver trauma. Liver packing is an appropriate and successful means of controlling this type of exsanguinating hemorrhage. Further, it may prevent impending mortality and allow ultimate survival of an otherwise lethal injury.

For additional information or a copy of the complete study, contact Michael A. Erdek, MD, at Geisinger Medical Center, (717) 271-6211.

Clinical Ethics Help Clarify Complex Times

Ralph A. Capone, MD

Reprinted with permission from the Westmoreland County Medical Society Bulletin, *June 1993.*

"Clinical ethics helps the physician find what is right and good for a patient at that particular point in a patient's life."

Dr. Capone, an internist and geriatric physician, is a member of the Board of Trustees, Jeannette District Memorial Hospital, Jeannette, and chairman of the Institutional Ethics Committee, Mercy Hospital, Pittsburgh.

Medical ethics has come a long way in the U.S. since the early 1960s. This discipline rapidly evolved after Dr. Belding Scribner invented the permanent arteriovenous access shunt which bears his name. His device provided a practical way to dialyse renal failure patients.

As there were many such patients, most of whom lacked the financial resources to afford this treatment, the so-called Seattle "God Committee" was formed. It consisted of a group of lay persons who chose who received hemodialysis. Widely criticized, this committee used social-worth criteria to determine who would benefit from this innovative and expensive technological breakthrough.

In 1972, this controversy finally ended when the federal government provided funding for hemodialysis for *all* end-stage renal disease patients. Although this may have ended the controversy, it did not address how to decide future dilemmas in which many patients feel entitled to various treatments which the government cannot fully subsidize.

The medical profession had recognized the limits of government intervention in health care and also had realized that medicine was becoming a more complex technological and moral enterprise. The era of rigorous medical ethics began.

Physicians realize that they practice in a pluralistic society. Patients, families, and health care professionals do not always share the same cultural heritage and values.

Physicians must have not only technical skills to practice good medicine, but also caring skills, listening skills, and empathy. But to serve patients in this way requires a commitment to technically competent, technically compassionate, and ethically sound medical care. Clinical ethics has evolved since the 1960s to help clinicians practice this kind of medicine.

But clinical ethics is *not* a separate discipline from clinical medicine. It has no other agenda nor function but to help the medical profession achieve its goals of curing disease and relieving suffering. It is *not apart from but a part of* clinical medicine.

William May, in *The Physician's Covenant*, calls clinical ethics "corrective vision" because it helps clinicians *see* the clinical situation in a different light. Clinical ethics helps the physician find what is *right* and *good* for a patient at that particular point in a patient's life.

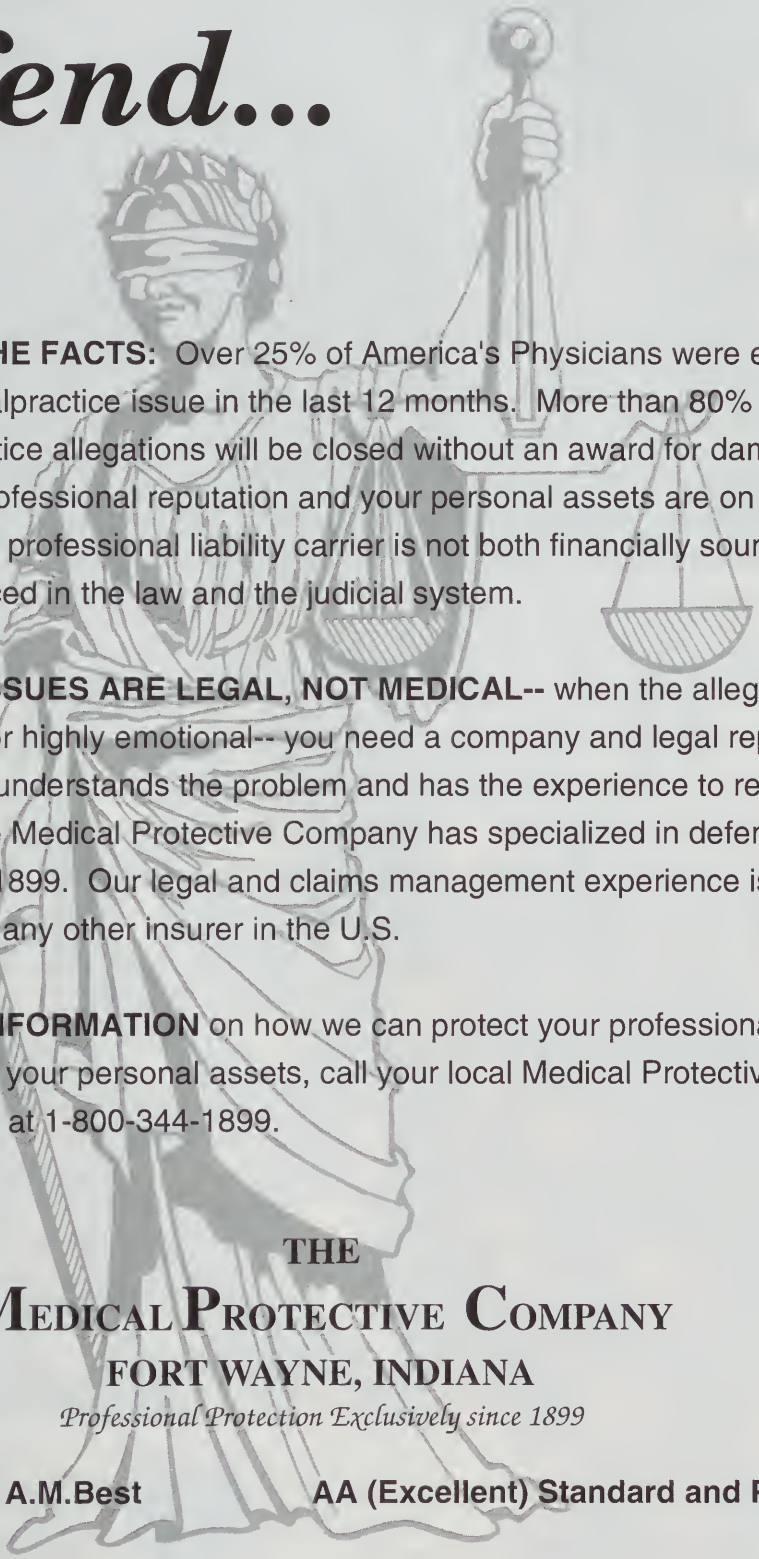
The technical advances of medicine have created complicated choices for patients and physicians. The basic principles of medical ethics—autonomy, beneficence, and non-maleficence—are applied in clinical situations in order to help clarify the roles and values of patients, families, and health care professionals as each strives to make the best decisions. In an open society, these principles become "action-guides" for each participant as they go through the decision-making process. They also serve to protect patients from harm and abuse. Clinical medicine is indebted to these ethical principles because they have provided a framework for rational discourse on differing values and value conflicts in the medical decision-making process.

But ethical principles do not insure the recognition or relief of patients' suffering. Clinical ethics focusing on principles alone miss much of clinical reality. For any patient, that reality is being in the middle of his or her life's narrative and suddenly being cut off from all that is familiar by a particular illness.

What a patient wants, among other things, is restoration of his or her sense of "wholeness" or "well-being." It is from this loss of wholeness that patient suffering arises. But in order to relive suffering, first it must be recognized.

Clinical ethics, in going beyond principles and grounding itself in the "narrative unity" of a patient's life story, begins to approach an "ethics of care." Caring, for years done so well by the nursing profession, teaches physicians how to *see* suffering and starts them on the way toward reducing or alleviating it. To learn the art of medicine is really the task of clinical ethics, which is really about teaching physicians how to *care for* and *care about* patients.

...a promise to defend...



HERE ARE THE FACTS: Over 25% of America's Physicians were embroiled in a malpractice issue in the last 12 months. More than 80% of those malpractice allegations will be closed without an award for damages. Your professional reputation and your personal assets are on the line when your professional liability carrier is not both financially sound *and* experienced in the law and the judicial system.

WHEN THE ISSUES ARE LEGAL, NOT MEDICAL-- when the allegations are frivolous, or highly emotional-- you need a company and legal representation that understands the problem and has the experience to resolve the issue. The Medical Protective Company has specialized in defending doctors since 1899. Our legal and claims management experience is unmatched by any other insurer in the U.S.

FOR MORE INFORMATION on how we can protect your professional reputation and your personal assets, call your local Medical Protective General Agent at 1-800-344-1899.

SOMETIMES THE BEST DEAL IS THE ONE YOU HAVEN'T HEARD ABOUT.

Maybe you haven't heard about the Medical Inter-Insurance Exchange (MIIX). After all, we're a relatively new player in Pennsylvania's medical professional liability insurance marketplace.

But ask your counterparts in New Jersey, and you'll find we've been getting rave reviews since we wrote our first policy there in 1977. We're proud that 98 percent of our 9,000 insured physicians renew their policies each and every year. With such an outstanding track record, we must be doing something right.

Perhaps it's our **innovative products**, such as our new **$500,000** HIV benefit that provides income protection — at no additional charge — for physicians who become HIV positive. We were the first professional liability insurer in the state of Pennsylvania to offer this coverage.

Or maybe it's our **commitment to service**, which includes 24-hour customer assistance and a claims staff that's the best in the industry. Our insureds know that MIIX makes sense financially, too, considering our outstanding discounts for new and part-time practitioners. We also offer flexible premium payment plans that help you manage your money.

Because MIIX is a **physician-owned company**, you can be assured that everything we do is designed with your best interests in mind. Call us today so you can join your peers who are already benefiting from the MIIX difference.

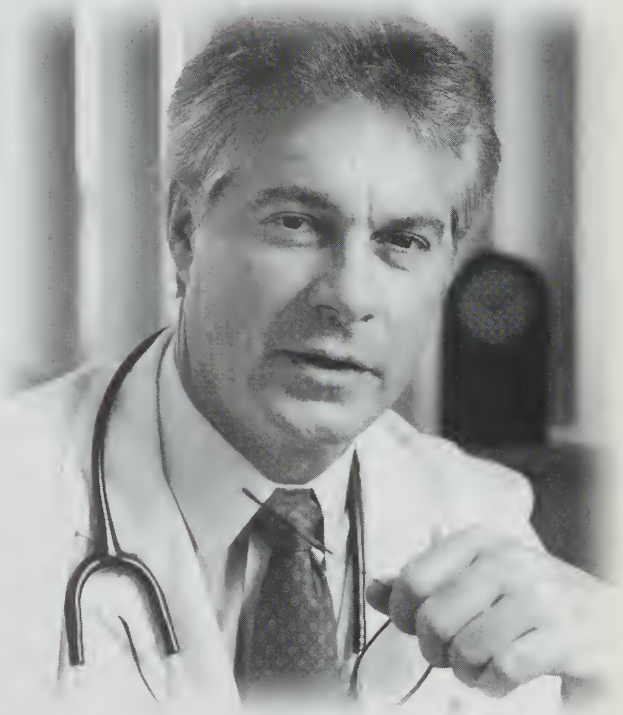
"Unfortunately,

he was already sitting in my examining room. This guy was a walking liability suit looking for a victim. He was angry, non-compliant. It was one of those rare, no-win cases and, well, I guess my number was up.



Then I remembered PMSLIC. So I stepped into the next room and gave them a call. They put me in touch with a member of their Risk Management team, who advised me of the relevant legal issues and the implications of each of my alternatives. Right on the spot. As a result, I was able to make the best medical recommendation with the peace of mind that comes from knowing my legal interests were also protected. I guess that's what it's all about. Peace of mind. The kind you only get from people who really take the time to help. That's excellent service. I'll never change carriers."

MEDIGRAM

FREE APPEAL REPRESENTATION OFFERED FOR MEMBERS: The State Society has been working with the AMA and other states involved in the Medicare clinical lab overpayment issue to minimize hassles in the appeals process. The carrier handling the appeals process, Blue Cross-Blue Shield of Maryland, has agreed to pursue joint representation of physicians for what is probably the most important and universal issue—the "at fault" issue. *Members who have not already received information and who are interested in this "consolidated" appeal process should contact the Society's Legal Department at (800) 228-7823* ***as soon as possible.***

The consolidated appeal will be handled by the AMA's outside counsel, Sidley and Austin. The AMA will pay a large portion of the costs, with the states sharing a portion as well. ***There will be no charge to the physicians involved.***

Inclusion in the consolidated appeal would apply to the "at fault" issue only, and physicians who wish to raise other issues may want to consult with personal counsel. While resolution of the "at fault" issue may completely resolve most cases, physicians who believe the amounts stated in the Blue Shield overpayment demand letter are incorrect, or who wish to raise other personal issues, may be foreclosed from raising those issues at a later date if they do not address them at the outset.

The Society has been instrumental in negotiating a resolution on behalf of physicians involved in the issue. Among other concessions, the Society has negotiated a decrease in the number of physicians required by the Health Care Financing Administration to make repayment (from 1,451 to 343), an increase in the length of installment payment options, and waivers of interest payments.

HCFA DENIES SOCIETY REQUEST FOR SINGLE MEDICARE CHARGE CLASS: The Society on April 6 received a letter from the Health Care Financing Administration (HCFA) denying our request that Pennsylvania be converted to a single statewide payment area under the Medicare physician fee schedule. According to HCFA Administrator Bruce C. Vladeck, "We do not believe that [the Society's] request meets our criterion of demonstrating overwhelming support among both winning and losing physicians for a statewide payment area. Rather, it appears that there is significant opposition to the change among losing physicians."

GOVERNOR EXPECTED TO APPROVE COVERAGE FOR PAP SMEARS: The state House of Representatives on March 22 passed Senate Bill 1103, requiring health insurers to provide coverage for pap smears. The vote was 193-3. Sponsored by Senator Allyson Schwartz (D-Philadelphia), the bill was previously approved by the Senate, and since there were no House amendments, it moved to the governor's desk. At press time, the governor was expected to sign the bill in mid-April.

NEWSPAPER ADVERTISEMENTS CARRY MEDICINE'S MESSAGE: Full-page advertisements, headlined "We agree," appeared in the *Washington Post, New York Times, Wall Street Journal,* and *USA Today* on March 8. Signed by the medical societies of all 50 states and the District of Columbia, and by 64 national specialty societies, the ads contain the text of a letter sent to the White House and Congress outlining basic reform principles—universal coverage, patient choice—backed by the signing organizations.

AMA LAUNCHES ANTI-TOBACCO CAMPAIGN: The AMA in March launched a new anti-tobacco campaign, including a program to help Americans quit smoking, federal laws to regulate tobacco products, and new efforts to ban smoking in public places. The AMA will apply pressure at local, state, and federal levels to protect non-smokers from the effects of passively inhaled cigarette smoke.

MEMBERS PREPARED FOR SPRING ASSEMBLY: At press time, more than 260 members were registered for the Society's annual Spring Assembly, to be held April 19-20, 1994, in Harrisburg. Featured are speeches on the future of medicine and health system reform, and tools for dealing with the future. For late registration, call the Society at (800) 228-7823.

SOUND PROTECTION

Princeton knows professional liability insurance.

And we know the disquieting reality. No matter how excellent your skills, you can still be drawn into a medical malpractice lawsuit.

We provide a strength that's instrumental to peace of mind. Just note our success rate over the last four years for cases in the courts: 95 percent were resolved in favor of our policyholders.

That's sound protection for doctors who choose Princeton.

Princeton. It's worth it!

The Big Push

John W. Mills, MD
Medical Editor

I was privileged to attend the AMA's March 8 rally in Washington, DC, entitled "Partnership In Action: Uniting For America's Health." The day was filled with congressional speakers, and because of a State Society board meeting on March 9, we had to squeeze in our congressional visits.

The AMA is trying very hard to get the message across that American physicians are united and really agree on three areas of concern: physician voice on health system reform, patient choice of physician, and universal coverage.

There was some fatherly advice from a speaker about endorsing broad issues which, when they change as time goes by, locks us in with no way to retreat without losing credibility. The American College of Surgeons just experienced this when they issued an "Explanatory Letter" on their endorsement of the single-payer system.

Eleanor Clift of *Newsweek* and Fred Barnes of the *New Republic* set the stage for the rally through their views on the Clinton Plan and their ideas about the congressional time table. Clift sees a window of opportunity for Clinton's plan if hearings progress rapidly. She also feels Whitewater could bring down the messenger (Hillary) and thus the message—Hillary's task force and their plan.

Surprisingly, Barnes generally agreed with Clift. He sees the problem as a two-government White House—Hillary wanting to hold the line on the task force's plan, and Bill willing to compromise. He also thinks the White House needs to move rapidly, or they'll lose it.

U.S Representative Newt Gingrich (R-GA) favors the Michel-Lott bill (H.R. 3080), which was entirely new to us all. He sees no consensus at all on the hill. He warns of a secret bill written by Representative Dan Rostenkowski (D-IL) which will be rushed to the floor in record time, having been dealt with in committee by the "Democratic enforcers." Rostenkowski has problems of his own which may defeat the above possibility. Meanwhile, Representative Jim McDermott (D-WA) touted his own bill.

Senator Phil Gramm (R-TX) made more sense than all the other speakers. He's an elder statesman, weathered by years in the Senate. He said the Clinton plan takes away some basic freedoms by mandates, and observed that under the Clinton plan all federal employees are exempt. Why, if it's good for all the rest of us? I believe Senator Gramm wants a bill passed this year, but he firmly believes that "we can't fix what's wrong by destroying what's right with our system." Along that line, Senator Bob Dole (R-KS) also feels a bill of some sort will pass; however, neither senator elaborated.

We spent some time with Congressman John Murtha (D-PA), who expressed more substance on what we might expect in a health system reform bill. Tort reform is a lost cause, and he seriously doubts we'll ever see anything until the *public* demands it. Preventive medical measures and antitrust relief are definite possibilities. He favors the incremental approach to health system reform and envisions yearly changes to fix most problem areas.

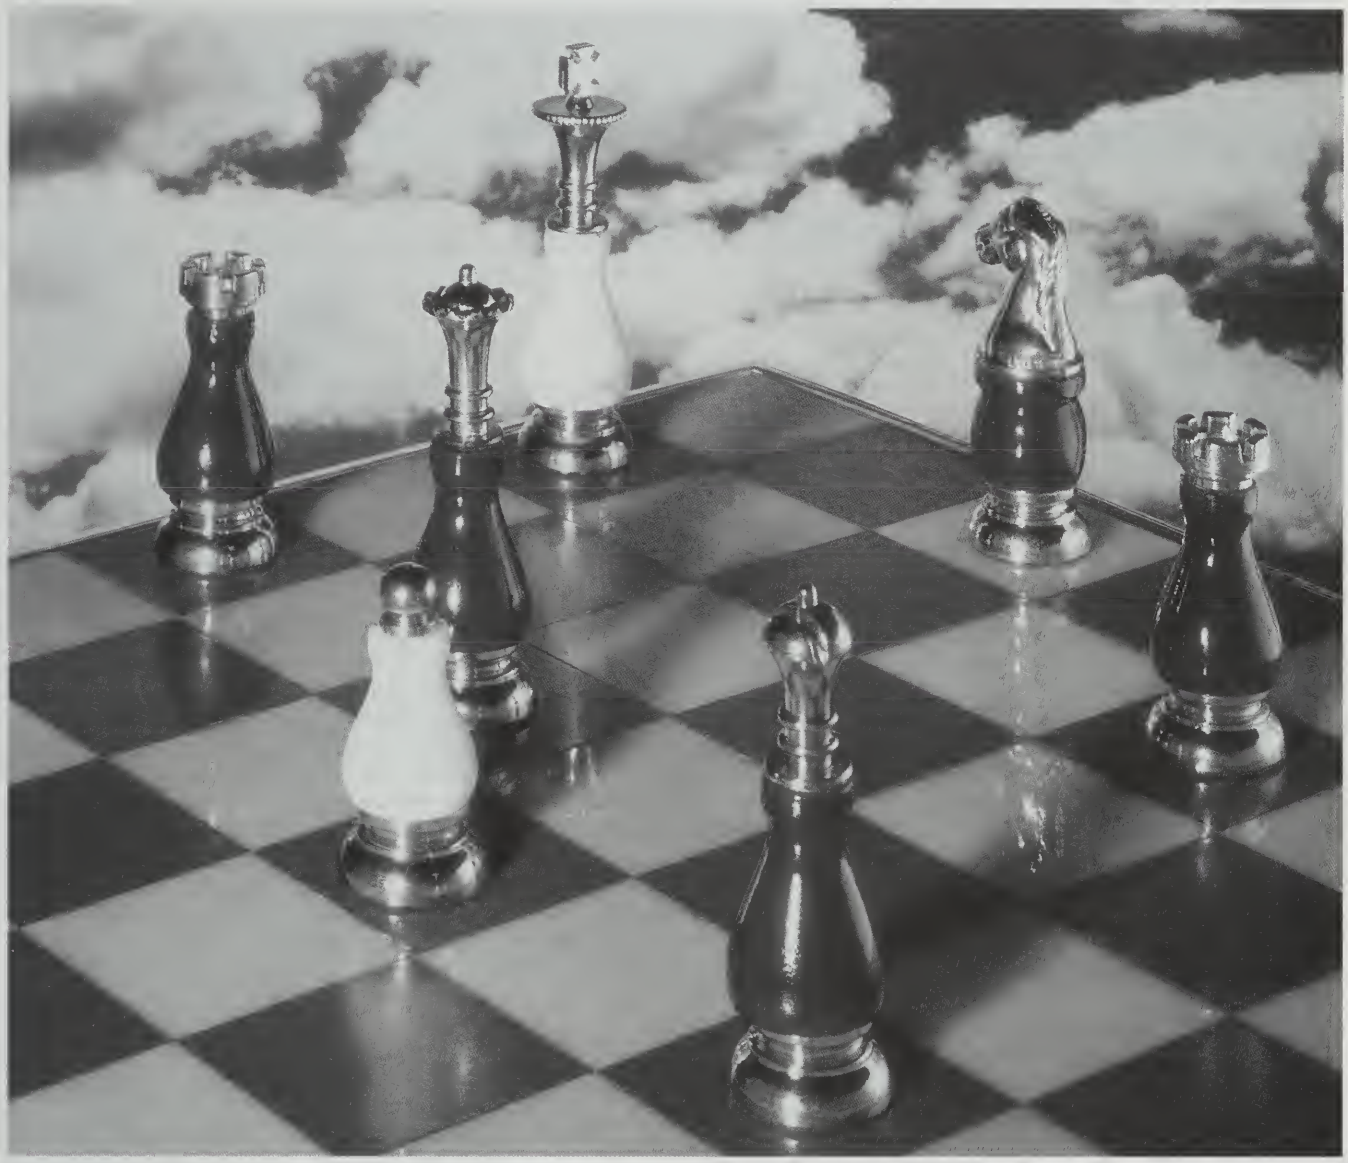
All speakers stressed our grassroots ability to talk with our patients about the issues and an important duty to our profession to keep in close contact with our legislators in both congressional houses.

Thus, the "big push" is on—talk to your patients and your congressional legislators. This may very well be our last chance.

A couple of quotes from the meeting are worth mentioning and should serve to put this all in a bit lighter perspective. Attributed to John McLaughlin of "The McLaughlin Group": "If you think health care is expensive, wait till it's free!" And from Congressman Gingrich: "If you like public housing, you'll love public medicine!"

I'll close with a thought-provoking quote from the February 14, 1994, *Wall Street Journal* by Swiss medical philosopher Ernest Truffer. "The increasing interjection of third parties between doctor and patient amounts to a rejection of the *medical ethic*—which is to care for a patient according to the latter's specific requirements—in favor of *veterinary ethic,* which consists in caring for the sick animal not in accordance with its specific medical needs, but according to the requirements of its master and owner." ⬡

The author (third row from bottom, right) contemplates health system reform amid legislators' speeches at "Partnership In Action: Uniting For America's Health," the AMA's March 8 rally in Washington, DC.



In claims, it's the endgame that counts

A malpractice claim brought against a physician brings to mind two things: reputation and money. We consider a third: the bond of care and trust between physician and patient.

Successful endgame results resolve all three. To do that, you need a consistent, winning strategy. Strategy that considers the merits of the claim, the complex court system and the National Practitioner Data Bank. Knowing when **and how** to fight is crucial.

In little more than a decade, we've achieved checkmate in over 95% of the cases taken to court. A vigorous defense, a successful conclusion for our policyholders. And always, your participation in every decision. When we need to settle a claim, settlements are fair to both parties.

We're here to serve physicians, patients and the healthcare field. How is this done? With financial stability, competitive premiums, integrity, and the right team members.

Physicians Insurance Company is dedicated to making all these elements work together. That's why we get to endgame with confidence. That's why we'll continue to be here for our policyholders.

PHYSICIANS INSURANCE COMPANY

Society Efforts Focus on Good of All

Martin A. Murcek, MD

As I travel around the state and meet with members of the Society, one of the most frequent questions I hear is, "What is the Society doing for me?" The only thing difficult about answering this question is trying to decide where to begin.

The Society undertakes such a range of activities and initiatives on behalf of the physicians of Pennsylvania that it's easy to leave something out of the answer. Let me describe a few of our efforts.

Possibly the most important service we are providing to our members is not readily visible: the constant activity of our lobbyists. If you ask your state legislator, and he or she replies honestly, you'll find that our lobbyists receive an A+ rating. They are prepared and knowledgeable.

Our staff monitors the *Pennsylvania Bulletin*, and keeps our lobbyists up-to-date on the status of bills moving through the state legislature. This effort allows us to be heard during the development of the specific regulations in new laws. As a result, many regulations are more physician-friendly by the time they go into effect.

A lesson learned during the fights over workers' compensation and auto insurance, as they related to physicians' fees, we have developed "Quick Response Committees," made up of Society leaders and physicians knowledgeable in the specific issue being addressed. This way, we are more responsive and flexible when the time comes to oppose or re-direct legislative initiatives that are potentially damaging to the medical community.

One thing that frustrates me a great deal is that I don't feel our members read their mail, at least that which comes from the Society. I know we are all inundated with mail, but the Society makes some valuable resources and information available to the membership through its mailings.

About four years ago, the Forbes Group of Virginia worked with the Society to restructure our communication activities. We have cut down on the size, volume, and complexity of our publications and other mailings. Check out *Executive Report,* and for those of you who receive it, *Call to Action.* The latter may be one of our most important mailings, because it alerts *you* to what your local legislators are up to with respect to legislation that affects physicians. Your direct communications with your local legislators are crucial to getting our message heard. *Call to Action* lets you know who in Harrisburg needs to hear directly from you on the issues.

It's important to remember that politicians perceive physicians as another special interest group, not as individuals or as individual specialties. The Society's approach to representing all of us is more effective than the scattershot efforts of a bunch of specialty groups all shouting over each other to be heard.

> ***"...the Society makes some valuable resources and information available to the membership through its mailings."***

Recently, the Society formed a management service organization (MSO, see page 20) which is designed to advise physicians on a variety of issues related to the business side of our profession. The new company will provide information on managed care, and offer assistance to physician groups forming their own locally controlled and operated health maintenance organizations and independent practice associations.

So, while the Society may not seem to be devoting as much of its efforts to *your* particular specialty or region of the state, remember that we are working for *all* our members as hard as the leadership and staff possibly can!

ou're on solid ground with the Dodson Plan.

More than 75 years ago, Bruce Dodson, Sr. pioneered the concept of the dividend plan for workers' compensation insurance. Dodson Group has been helping businesses like yours save on premium costs ever since.

The Dodson Plan gives you the opportunity to earn a dividend each year, depending on the claim experience of all insured members. We carefully select those who participate, creating the greatest potential for you to save.

Pennsylvania Medical Society endorsed the Dodson Plan in 1973. Since then, participating members have earned a total of **$2,309,240** in dividends. Share in the savings!

You're on solid ground with Dodson.

LETTERS TO THE EDITOR

CURRENT CONCEPTS II PRAISED BY MANY

The Pennsylvania Academy of Ophthalmology received several letters praising its "Current Concepts in Ophthalmology," mailed with the February issue of PENNSYLVANIA MEDICINE. *The following is a sampling of comments:*

"Although I have retired from the practice of internal medicine in Philadelphia, I'm still interested. I found the publication of 'Current Concepts in Ophthalmology' in 1993 and 1994 excellent and most interesting. I hope the Pennsylvania Academy of Ophthalmology will continue the series."

E. Cooper Bell, MD
Lancaster, SC

"I liked the ophthalmology supplement to PENNSYLVANIA MEDICINE. It was well written, concise, and well illustrated. It would be nice to have similar supplements from other specialties."

Michael C. Beachley, MD
Pittsburgh

The journal was "excellent, [an] outstanding example of ophthalmic outreach programs. Hopefully you will continue to provide a forum for education and debate."

Next Month in PENNSYLVANIA MEDICINE

Daniel A. Hussar, PhD, the Remington Professor of Pharmacy at the Philadelphia College of Pharmacy and Science, continues his overview of the 22 therapeutic drugs first marketed in 1993, including their most important properties and comparisons with similar drugs.

For the first article in Dr. Hussar's series, see pages 12-16 of this issue.

Your Letters Are Welcomed

The editors of PENNSYLVANIA MEDICINE encourage comments about the magazine and its contents, as well as viewpoints on current medical issues. Letters should be typed or legibly handwritten, concise, and should not exceed 200 words.

Please send letters to:
Managing Editor
PENNSYLVANIA MEDICINE
777 East Park Drive
P.O. Box 8820
Harrisburg, PA 17105-8820

Letters are published at the discretion of the editors and are subject to editing.

You Deserve the Best.

Before purchasing computer software for your practice, make sure your vendor can offer the following:

- ✔ *Automated Posting of Medicare, Blue Shield, Prudential and other carriers.*
- ✔ *No testing for Medicare Electronic Claim Submission.*
- ✔ *Proof the system can reduce Accounts Receivable by 40-60%, even when replacing existing systems.*
- ✔ *Assurance your office can be "on-line" in only 8 hours of on-site training.*
- ✔ *Medicare/PA Blue Shield Preferred VIP recognition.*
- ✔ *Excellent support and update service, including a 24-hour Bulletin Board Service.*
- ✔ *Affordability.*

New Therapeutic Agents Marketed in 1993

Daniel A. Hussar, PhD

This is the first in a series of articles overviewing new drugs approved and marketed in the U.S. in 1993.

In 1993, the Food and Drug Administration (FDA) approved 25 new molecular entities (NMEs), 23 of which are for therapeutic use and two are diagnostic agents. Eleven of the NMEs for therapeutic use, as well a new biological agent intended for therapeutic use, were both approved and marketed in the United States in 1993. In addition, 11 other NMEs that the FDA approved before 1993 (most in late 1992) were marketed during the year. Thus, a total of 23 therapeutic agents reached the U.S. market for the first time in 1993, a considerably lower number than the 30 new therapeutic agents marketed in 1992 and the record number 31 new agents marketed in 1991. Many of the 13 therapeutic agents approved in 1993 but not marketed before the end of the year have become available in early 1994.

This review of the therapeutic agents first marketed in 1993 considers their most important properties and, when possible, compares them with other available agents with similar properties. Of the 23 new therapeutic agents, 22 are considered in this paper. The one agent not reviewed is flosequinan, which was withdrawn from the market after being available only several months because of a concern about toxicity. This discussion of new drugs focuses on the most important properties of these agents; when additional information is needed, more comprehensive references and the product literature should be consulted.

Antibiotic

Piperacillin sodium/tazobactam sodium (Zosyn-Lederle) represents a combination of a new beta-lactamase inhibitor (tazobactam) with a penicillin antibiotic that has been marketed for a number of years. Of the 14 penicillin derivatives marketed in the U.S. (see Table 1, next page), piperacillin is the fourth to also be marketed in combination with a beta-lactamase inhibitor, joining amoxicillin, ampicillin, and ticarcillin. The most common form of bacterial resistance to the beta-lactam antibiotics involves the production of beta-lactamase enzymes. By inactivating these enzymes, the beta-lactamase inhibitors protect antibiotics such as the penicillins from destruction by the enzymes, resulting in the enhancement of the spectrum of action of the penicillins to include bacteria that are normally resistant.

Tazobactam is the third beta-lactamase inhibitor to be used in the U.S., joining potassium clavulanate and sulbactam. The new agent demonstrates inhibitory activity against most of the classes of beta-lactamase enzymes that have been identified, and appears to be more active against a wider spectrum of enzymes than its two predecessors. Tazobactam is a derivative of the penicillin nucleus but has minimal intrinsic antibacterial activity. When used in combination with piperacillin, the synergistic action is due to the inhibition of beta-lactamases by tazobactam, and the resultant extension of the spectrum of activity of piperacillin to include certain bacteria that are not susceptible to piperacillin when given alone.

Piperacillin/tazobactam is as active as the first-generation cephalosporins (e.g., cefazolin [Ancef]) against gram-positive aerobic bacteria and the third-generation cephalosporins (e.g., ceftriaxone [Rocephin]) against gram-negative aerobic bacteria. Its coverage against enterococci is comparable to ampicillin, and its coverage against anaerobic bacteria is similar to metronidazole (Flagyl). Because of its broad spectrum of activity, it may be useful as empiric monotherapy in patients with suspected polymicrobial infections. In comparative clinical trials in patients with polymicrobial infections, piperacillin/tazobactam had equal or greater efficacy than clindamycin (Cleocin) plus gentamicin (Garamycin), imipenem/cilastatin (Primaxin), and ticarcillin/potassium clavulanate (Timentin).

The labeled indications for piperacillin/ tazobactam include the intra-abdominal, gynecologic, skin, and lower respiratory tract infections noted in Table 2 (see next page). These indications are most similar to the labeled indications for ampicillin/sulbactam (Unasyn). In comparing the role of piperacillin/tazobactam with that for piperacillin, the new product would primarily be used as monotherapy for patients with suspected or documented polymicrobial infections, whereas piperacillin (without tazobactam) is most often used in combination with an aminoglycoside for infections in neutropenic patients or in patients with nosocomial pneumonia.

The use of piperacillin/tazobactam is contraindicated in patients with a history of an allergic reaction to any of the penicillins, cephalosporins, or beta-lactamase inhibitors. As with other penicillin formulations, an aminoglycoside (e.g., gentamicin) should not be combined with piperacillin/tazobactam in the same solution for administration because the aminoglycoside may be inactivated.

Piperacillin/tazobactam is administered by intravenous infusion over a period of 30 minutes. It is supplied in vials containing 2.25, 3.375, and 4.5 grams of the drugs, representing piperacillin sodium equivalent to 2, 3, or 4 grams of piperacillin and tazobactam sodium equivalent to 0.25, 0.375, or 0.5 gram of tazobactam, respectively. The usual adult dosage is 3.375 grams every six hours, and the usual duration of treatment is seven to 10 days.

Antimycobacterial agent

Rifabutin (Mycobutin-Adria; SmithKline Beecham; formerly known as ansamycin) is an antimycobacterial agent that is similar in many of its properties to rifampin (Rifadin, Rimactane). It is active against *Mycobacterium avium* and *Mycobacterium intracellulare*, which comprise *Mycobacterium avium* complex (MAC).

MAC disease is a potentially life-threatening opportunistic infection that often occurs in people with acquired immunodeficiency syndrome (AIDS). In the U.S., up to 40 percent of patients with advanced human immunodeficiency virus (HIV) infection develop MAC disease. Disseminated MAC infections are very difficult to treat and require the combined use of several antiinfective agents. Therefore, in addition to efforts to develop more effective treatments for infections, there have been studies of prophylaxis measures that can reduce the incidence and severity of MAC disease.

Rifabutin is indicated for the prevention of disseminated *Mycobacterium avium* complex (MAC) disease in patients with advanced HIV infection and is the first drug to be approved for such preventive therapy. In two clinical trials involving 1,146 patients with AIDS and CD4 counts $\leq$ 200 cells/μl, patients receiving rifabutin were two to three times less likely to develop MAC bacteremia than patients receiving placebo. On December 23, 1993, the FDA approved the use of clarithromycin (Biaxin) for the treatment of disseminated MAC disease, making it the first drug to receive an indication for the treatment

of this infection. It is recommended that clarithromycin be used in combination with other agents that have demonstrated activity against MAC, including ethambutol (Myambutol), clofazimine (Lamprene), and rifampin.

Rifabutin exhibits in vitro activity against many strains of *Mycobacterium tuberculosis*. However, rifabutin prophylaxis should not be administered to patients with active tuberculosis because of the possibility of the development of tuberculosis that is resistant both to rifabutin and rifampin. Cross resistance between the two agents is commonly observed with *M. tuberculosis* as well as *M. avium* complex isolates. Patients who develop complaints consistent with active tuberculosis while receiving rifabutin prophylaxis should be evaluated immediately, so that those with active disease may be given an appropriate combination regimen of antitubercular agents.

Like rifampin, rifabutin may cause a brown-orange discoloration of urine, feces, saliva, sputum perspiration, tears, and skin, as well as permanent staining of soft contact lenses. Patients must be advised of this possibility. Rifampin is also known to be a potent inducer of hepatic enzymes resulting in a faster rate of metabolism and a reduced therapeutic effect of concurrently administered drugs that are metabolized by these enzyme systems (e.g., warfarin [Coumadin], corticosteroids, oral contraceptives, cyclosporine [Sandimmune], and numerous other agents). Although rifabutin appears to be a less potent enzyme inducer than rifampin, the concurrent use of the new drug with other agents that are metabolized by hepatic enzyme systems should be closely monitored. Patients using oral contraceptives should be advised to use nonhormonal or additional methods of birth control while taking rifabutin.

The recommended adult dosage of rifabutin is 300 mg administered once daily. For patients who experience GI intolerance, administering 150 mg doses twice a day with food may avoid these effects. In the limited experience with its use in children, different doses were employed, with no evidence that doses greater than 5 mg/kg daily are useful. Doses of the drug for use in children may be administered mixed with foods such as applesauce.

Rifabutin capsules are supplied in a 150-mg potency.

Table 1

Penicillins and Penicillin/ Beta-Lactamase Inhibitor Combinations

Natural penicillins

Penicillin G potassium (e.g., Pentids)
Penicillin V potassium (e.g., Pen Vee K)

Penicillinase-resistant (antistaphylococcal) pencillins

Cloxacillin sodium (e.g., Tegopen)
Dicloxacillin sodium (e.g., Dynapen)
Methicillin sodium (e.g., Staphcillin)
Nafcillin sodium (e.g., Unipen)
Oxacillin sodium (e.g., Prostaphlin)

Aminopenicillins

Amoxicillin (e.g., Amoxil)
Amoxicillin/potassium clavulanate (Augmentin)
Ampicillin (e.g., Omnipen)
Ampicillin sodium/sulbactam sodium (Unasyn)
Bacampicillin (Spectrobid)

Extended-spectrum (antipseudomonal) penicillins

Carbenicillin indanyl sodium (Geocillin)
Mezlocillin sodium (Mezlin)
Piperacillin sodium (Pipracil)
Piperacillin sodium/tazobactam sodium (Zosyn)
Ticarcillin disodium (Ticar)
Ticarcillin disodium/potassium clavulanate (Timentin)

Table 2

Labeled Indications for Piperacillin/Tazobactam

- Appendicitis (complicated by rupture or abscess) and peritonitis caused by piperacillin-resistant beta-lactamase producing strains of *Escherichia coli* or the following members of the *Bacteroides fragilis* group: *B. fragilis. B. ovatus, B. thetaiotaomicron,* or *B. vulgatus.*
- Postpartum endometritis or pelvic inflammatory disease caused by piperacillin-resistant beta-lactamase producing strains of *Escherichia coli.*
- Uncomplicated and complicated skin and skin structure infections, including cellulitis, cutaneous abscesses, and ischemic/diabetic foot infections caused by piperacillin-resistant, beta-lactamase producing strains of *Staphylococcus aureus.*
- Community-acquired pneumonia (moderate severity only) caused by piperacillin-resistant beta-lactamase producing strains of *Haemophilus influenzae.*

Antifungal agent

Terbinafine hydrochloride (Lamisil-Sandoz) is the second allylamine derivative to be marketed for the topical treatment of dermatologic fungal infections, joining naftifine (Naftin). The new drug is indicated for the topical treatment of interdigital tinea pedis (athlete's foot), tinea cruris (jock itch), and tinea corporis (ringworm) caused by *Epidermophyton floccosum, Trichophyton mentagrophytes.* or *Trichophyton rubrum.* The oral administration of terbinafine is also being evaluated in the management of certain fungal infections; however, an oral formulation of the drug is not yet available.

With the use of many of the topically applied antifungal agents, it is recommended that the treatment of tinea pedis be continued for four weeks to provide control of the infection and to reduce the possibility of recurrence. In several of the studies of terbinafine in the treatment of tinea pedis, a high cure rate was attained with just one week of treatment. Studies comparing terbinafine with other antifungal agents are too limited at this time to reach a conclusion that the new drug has a significant advantage over previously marketed agents. However, the high level of activity of terbinafine against these fungal organisms, combined with a rapid onset of its fungicidal action, suggest the possibility of a shorter course of therapy (i.e., one week) which may help avoid treatment failures caused by noncompliance with longer treatment regimens (e.g., four weeks).

Terbinafine cream should be applied to the affected and immediately surrounding areas twice a day in the treatment of interdigital tinea pedis, and once or twice a day in the treatment of tinea cruris and tinea corporis. Treatment should be continued until clinical signs and symptoms are significantly improved; in many patients this occurs by the seventh day of drug therapy. The duration of drug therapy should be for a minimum of one week and should not exceed four weeks. Many patients treated with shorter courses of therapy (one to two weeks) continue to improve during the two to four weeks after drug therapy has been completed. Therefore, patients should not be considered therapeutic failures until they have been observed for a period of two to four weeks off therapy.

Terbinafine hydrochloride cream is supplied in a one percent potency.

Antiviral agent

Rimantadine hydrochloride (Flumadine-Forest) is an analog of amantadine (Symmetrel) that is active against in-

fluenza A virus. It is specifically indicated for the prophylaxis and treatment of illness caused by various strains of influenza A virus in adults, and for prophylaxis against influenza A virus in children. Although there has been considerably less experience with rimantadine than with amantadine, the results of the comparative studies that have been completed suggest that the two agents are similar in their efficacy against influenza A virus.

To prevent influenza infection, most recommend vaccination on an annual basis as the method of choice unless vaccination is contraindicated, not available, or not feasible. Early vaccination is advised to allow adequate time for the development of the antibody response prior to an influenza outbreak. If the vaccination is administered during an influenza outbreak, rimantadine or amantadine prophylaxis can be started when the vaccine is given and continued for at least two weeks until the protective antibody response develops from the vaccination.

Because rimantadine and amantadine may be effective in the treatment of influenza A virus infections, they should be considered for use in patients who develop an influenza-like illness during known or suspected influenza A infection in the community. However, treatment should be initiated as soon as possible after the onset of signs and symptoms of infection (i.e., within 48 hours) if a significant reduction of symptoms is to be attained.

In addition to its use for influenza A virus infections, amantadine is also indicated for the treatment of Parkinson's disease and drug-induced extrapyramidal reactions. However, these conditions are not indications for the use of rimantadine.

Rimantadine was well tolerated by most patients in controlled clinical trials. The new drug appears to be better tolerated than amantadine; in one prophylaxis study of 436 adults, seven percent of the subjects receiving rimantadine experienced adverse reactions (e.g., insomnia, dizziness, nausea, vomiting, anorexia) compared to 15 percent of those receiving amantadine, and four percent of those receiving placebo. Both rimantadine and amantadine have been reported to cause seizures in patients with epilepsy, and the use of these agents should be monitored closely in patients with a history of such a disorder.

The recommended dosage of rimantadine for prophylaxis or treatment in adults is 100 mg twice a day. A dosage reduction to 100 mg daily is recommended in patients with severe hepatic dysfunction or renal failure (creatinine clearance of 10 ml/min or less) and in elderly nursing home patients. When rimantadine is used for the treatment of influenza A virus infections in adults, therapy should be continued for approximately seven days from the initial onset of symptoms.

Rimantadine hydrochloride is supplied as tablets in a 100-mg potency and in a syrup formulation containing 50 mg/5 ml. Because of the similarity of the generic names rimantadine and ranitidine (Zantac), particular caution should be exercised in writing and interpreting prescriptions for these agents.

Antihypertensive agent

Bisoprolol fumarate is a beta-adrenergic blocking agent that has been marketed as a single agent (Zebeta-Lederle) and in combination with hydrochlorothiazide (Ziac). Both formulations are indicated for the management of hypertension, and Ziac is being promoted as "the first low-dose multimechanism agent approved and marketed as first-line therapy for the treatment of hypertension." The bisoprolol/hydrochlorothiazide combination contains low doses of both the beta-blocker and diuretic, and has been effective and well tolerated in the clinical studies. The formulation contains only 6.25 mg of hydrochlorothiazide in comparison to the 25 or 50 mg amounts (or the equivalent amount of another diuretic) included in other beta-blocker/diuretic combination products, and the new product would be less likely to cause dose-related adverse effects (e.g., hypokalemia).

Like acebutolol (Sectral), atenolol (Tenormin), betaxolol (Kerlone), and metoprolol (Lopressor), bisoprolol is cardioselective (i.e., selectively acts at $beta_1$-adrenergic receptors). This cardioselectivity is not absolute, however, and in higher doses (20 mg and above), bisoprolol also inhibits $beta_2$-adrenergic receptors located in the bronchial and vascular musculature. In general, patients with bronchospastic pulmonary disease (e.g., chronic bronchitis, emphysema) should not receive a beta-adrenergic blocking drug because of the risk of exacerbation of the pulmonary disorder. However, in the event that a patient with bronchospastic disease does not respond to or cannot tolerate other antihypertensive treatment, bisoprolol or another beta-blocker with relative cardioselectivity may be used cautiously in the lowest possible dose. A $beta_2$-agonist (bronchodilator) should be available in these situations.

In patients with coronary artery disease, the abrupt cessation of bisoprolol therapy may cause an exacerbation of angina pectoris and, in some instances, myocardial infarction or arrhythmia. Patients should be warned against interrupting or discontinuing their therapy without consulting their physician and, when bisoprolol therapy is to be discontinued, it is best to gradually reduce the dosage over a period of one week.

Bisoprolol may potentiate the action of other antihypertensive agents and should not be used concurrently with another beta-blocker. In patients receiving concurrent therapy with clonidine (Catapres), if therapy is to be discontinued, it is recommended that bisoprolol be discontinued for several days before the withdrawal of clonidine. Caution should also be exercised when using bisoprolol concurrently with myocardial depressants or inhibitors of AV conduction, such as certain calcium channel blockers (particularly, verapamil [Calan, Isoptin] and diltiazem [Cardizem]) or antiarrhythmic agents such as disopyramide (Norpace).

The usual starting dosage of bisoprolol is 5 mg once a day. If the antihypertensive effect is inadequate, the dose may be increased to 10 mg and then, if necessary, to 20 mg once daily. Bisoprolol fumarate tablets are supplied in 5- and 10-mg potencies. The combination formulations with hydrochlorothiazide contain 2.5, 5, or 10 mg of bisoprolol fumarate with 6.25 mg of the diuretic.

Antiarrhythmic agent

Sotalol hydrochloride (Betapace-Berlex) is a new antiarrhythmic agent that is unique because it both prolongs cardiac repolarization (Vaughan Williams Class III) and has beta-adrenergic-blocking activity (Vaughan Williams Class II). The beta-blocking action of the drug is non-cardioselective and is not associated with intrinsic sympathomimetic or local anesthetic activity.

Sotalol is indicated for the treatment of documented life-threatening ventricular arrhythmias such as sustained ventricular tachycardia. Because of the potential for causing proarrhythmic effects, its use in patients with less severe arrhythmias, even if the patients are symptomatic, is generally not recommended. In the clinical studies, sotalol was determined to be at least as effective as the other antiarrhythmic agents to which it was compared (e.g., quinidine, procainamide [Pronestyl], mexiletine [Mexitil], and propafenone [Rythmol]). Sotalol has not been demonstrated to have a beneficial effect on survival, but neither has it been shown to produce increased mortality, as has been the experience with certain other antiarrhythmic agents (e.g., encainide [Enkaid—withdrawn from the market]). In several studies, sotalol has been reported to be effective in suppressing supraventricular tachycardias

Wednesday Medical Seminar Series—8:30 a.m. to 3:30 p.m.

APRIL 6, 1994
Advances in the Treatment of Diabetes Mellitus
Course Director:
Jeffrey Miller, M.D.
Guest Lecturers:
Robert Tanenberg, M.D., and Jesse Roth, M.D.

MAY, 1994
No Seminar

Seminar Director: Allan B. Schwartz, M.D., Professor and Vice Chair of Medicine, Director, Continuing Medical Education for the Department of Medicine

Full Disclosure Statement: All faculty participating in continuing medical education programs sponsored by Hahnemann University are expected to disclose to the audience any real or apparent conflict(s) of interest related to the content of their presentation.

Statement of Accreditation: As an organization accredited by the Accreditation Council for Continuing Medical Education (ACCME), Hahnemann University designates this continuing medical education activity as Category 1 of the Physician's Recognition Award of the American Medical Association. One credit hour may be claimed for each hour of participation by the individual physician.

and atrial fibrillation. However, these are not labeled indications for the drug at this time.

Like other antiarrhythmic agents, sotalol may cause proarrhythmic events, and the occurrence of torsades de pointes (four percent) and other serious new ventricular arrhythmias (one percent) are the most important adverse effects associated with the use of the new agent. These reactions are most likely to occur within seven days of initiating therapy or of an increase in dose. A reduction in serum potassium and/or magnesium also increases the risk of torsades de pointes, and sotalol should not be used in patients with hypokalemia or hypomagnesemia prior to the correction of the imbalance.

A number of therapeutic agents, such as the Class I antiarrhythmic agents (e.g., quinidine, procainamidc. disopyramide [Norpace]), tricyclic antidepressants, phenothiazines, terfenadine (Seldane), and astemizole (Hismanal), are known to prolong the QT interval. The concurrent use of sotalol and one of these agents is best avoided; however, in some situations concomitant therapy may be necessary.

Sotalol has been used safely in the long-term treatment of life-threatening ventricular arrhythmias following a myocardial infarction (MI). However, its use in the early phase of recovery from acute MI is limited, and in two studies in post-infarction patients, involving the use of a nontitrated initial dose of 320 mg once daily and 320 mg twice daily, respectively, there were suggestions of an excess of early sudden deaths. Particular caution in the first two weeks post-MI is recommended, and careful dose titration is important, especially in patients with markedly impaired ventricular function. Many of the other precautions to be observed with the use of sotalol are related to its beta-blocking activity.

In addition to the possible drug interactions described earlier, there are several other interactions in which sotalol may be implicated. Additive effects would be expected if sotalol was used concomitantly with other Class III antiarrhythmic agents (e.g., amiodarone [Cordarone]) or beta-adrenergic blocking agents (e.g., propranolol [Inderal]). Concurrent use with a calcium channel blocking agent (e.g., verapamil [Calan, Isoptin]) may result in additive effects on atrioventricular conduction or ventricular function, as well as on blood pressure, possibly leading to hypotension. When sotalol is administered concurrently with a beta$_2$-receptor agonist (e.g., terbutaline [Brethine, Bricanyl]), the dosage of the latter agent may have to be increased.

It is best to begin therapy with sotalol in a hospital where the therapy can be very closely monitored. The recommended initial dosage of sotalol is 80 mg twice daily. The dosage may be increased, if necessary, to 240 or 320 mg/day, allowing two to three days between dosing increments in order to attain steady-state plasma concentrations and to allow monitoring of QT intervals. In most patients, a therapeutic response is obtained at a total daily dose of 160 to 320 mg/day, given in two divided doses. Some patients with life-threatening refractory ventricular arrhythmias may require doses as high as 640 mg/day. If sotalol is to replace previous antiarrhythmic therapy, the previous agent(s) should generally be withdrawn under careful monitoring for a minimum of two to three plasma half-lives.

Sotalol hydrochloride tablets are supplied in 80-, 160-, and 240-mg potencies.

Antithrombotic agent

About 250,000 patients undergo hip replacement surgery each year. There is a high risk of venous thromboembolism following this procedure and, in the absence of prophylaxis, the incidence of deep vein thrombosis (DVT) has been reported to range from 45 to 70 percent. DVT may lead to pulmonary embolism that may be fatal and, to prevent such complications, agents such as heparin or warfarin are usually employed for prophylaxis in patients undergoing hip replacement surgery.

Although the use of heparin for DVT prophylaxis has been effective and well tolerated in most patients, concern about the risk of bleeding reactions has lead to the development and evaluation of derivatives of heparin that may be less likely to cause this problem. The first such derivative to be marketed in the U.S. is *enoxaparin* (Lovenox-Rhone-Poulenc Rorer), a low molecular weight fraction of heparin that exhibits antithrombotic activity. Prepared by the degradation of heparin benzyl ester derived from porcine intestinal mucosa, enoxaparin has a higher bioavailability (following subcutaneous injection) and a longer half-life than unfractionated heparin.

In comparison to unfractionated heparin, enoxaparin has a higher ratio of anti-factor Xa to anti-factor IIa activity. The new agent does not significantly influence platelet aggregation or the plasma fibrinogen concentration, nor does it affect global blood-clotting tests (i.e., prothrombin time [PT] or activated partial thromboplastin time [APTT]).

Enoxaparin is indicated for the prevention of deep vein thrombosis following hip replacement surgery and represents an important addition to the small group of agents used for prophylaxis against this complication. It has been reported to be as effective or more effective than unfractionated heparin and, in some studies, the rate of major bleeding complications was comparable to that observed with placebo.

The use of enoxaparin has also been evaluated in the prevention of DVT following other surgical procedures (e.g., knee surgery, general surgery), and in the treatment of DVT. However, these are not labeled indications at the present time.

Although the incidence of hemorrhagic complications during enoxaparin treatment has been low, this is the reaction that warrants the greatest caution with the use of the new agent. The rates of major bleeding episodes during the clinical trials with enoxaparin, heparin, and placebo were four percent, six percent, and four percent, respectively. Enoxaparin is contraindicated in patients with active major bleeding and must be used with care in patients receiving oral anticoagulants and/or platelet inhibitors.

Enoxaparin is administered by subcutaneous injection and must not be administered by intramuscular injection. Its bioavailability is about 90 percent, and its maximum effect usually occurs three to five hours after injection. The recommended dosage is 30 mg twice daily subcutaneously, with the initial dose given as soon as possible after surgery, but not more than 24 hours post-operatively. This dosage regimen is recommended for all patients, and dosage titration is not necessary. Because the drug is not likely to affect PT or APTT, daily monitoring is usually not necessary in patients with normal presurgical coagulation parameters. Treatment should be continued throughout the period of postoperative care until the risk of DVT has diminished. The average duration of administration is seven to 10 days.

To administer enoxaparin, the patient should be lying down, and the drug is given by deep subcutaneous injection. Administration should be alternated between the left and right anterolateral, and left and right posterolateral abdominal wall. The whole length of the needle should be introduced into a skin fold held between the thumb and forefinger; the skin fold should be held throughout the injection.

Enoxaparin is supplied in prefilled syringes that contain 30 mg of the drug in 0.3 ml of Water for Injection.

Dr. Hussar is the Remington professor of pharmacy at the Philadelphia College of Pharmacy and Science.

SOCIETY OFFERS SECOND DRUG COST CHART

The Society's Center for Professional Drug Education and Information is continuing its efforts to provide physicians with the information they have requested on medication costs. This second in a series of charts focuses on *quinolone antibiotics*.

The new generation of quinolones offers an advantage over existing antibiotics because of their ability to eradicate multi-resistant pathogens. Generally, quinolones are *not* used as first-line therapy in infections encountered in the outpatient setting, such as otitis media, sinusitis, pharyngitis, and pneumonia. It has been determined that using quinolones inappropriately, in cases such as these, will increase the treatment expense, increase the failure rate, and increase the rate of bacterial resistance.

A quinolone antibiotic may be the drug of choice in the following conditions:

- bacterial conjunctivitis,
- infectious diarrhea,
- Salmonella carriers,
- traveler's diarrhea,
- bacterial prostatitis, and
- chronic otorrhea.

The chart below presents the average wholesale price of a 10-day course of treatment plus a $3 dispensing fee. While prices vary from pharmacy to pharmacy and region to region, this chart provides physicians with a means for making relative comparisons among quinolone antibiotics. The drugs are listed in alphabetical order by brand name. We are also providing cost information on alternative therapies.

For a free pocket card or wall chart version of this information on *quinolone antibiotics*, contact the Society's Center for Professional Drug Education and Information at (800) 228-7823. Pocket cards and wall charts are also available on nonsteroidal anti-inflammatory drugs.

Quinolone Antibiotics: Cost of 10 Days of Therapy

BRAND NAME	GENERIC NAME	ADULT DOSING	QUANTITY	BRAND COST	GENERIC COST
Cipro	Ciprofloxacin	500 mg BID	20	$61.45	NA
Floxin	Ofloxacin	200 mg BID	20	$56.62	NA
		400 mg QD	10	$36.61	
Maxaquin	Lomefloxacin	400 mg QD	10	$59.60	NA
Noroxin	Norfloxacin	400 mg BID	20	$49.84	NA
Penetrex	Enoxacin	400 mg QD	10	$29.00	NA
Alternative Therapies:					
Achromycin	Tetracycline	250 mg QID	40	$3.91	$4.27
Amoxil	Amoxicillin	500 mg TID	30	$15.12	$10.74
Augmentin	Amoxicillin/ Clavulanate	500 mg TID	30	$74.75	NA
Bactrim	Trimethoprim/ Sulfamethoxazole	160/800 mg BID	20	$20.05	$8.75
Ceclor	Cefaclor	250 mg TID	30	$60.38	NA
Cloxapen	Cloxacillin	250 mg QID	40	$17.64	$14.32
E-Mycin	Erythromycin	250 mg QID	40	$12.20	$8.70
Geocillin	Carbenicillin	764 mg QID	40	$67.06	NA
Keflex	Cephalexin	250 mg QID	40	$49.90	$13.72
Macrodantin	Nitrofurantoin	50 mg QID	40	$29.40	$3.73
Pathocil	Dicloxacillin	250 mg QID	40	$19.76	$16.80
Prostaphlin	Oxacillin	500 mg QID	40	$48.20	$24.87
Suprax	Cefixime	400 mg QD	10	$60.15	NA

Notes

Cost = Average wholesale price plus $3.00 dispensing fee.
Dosage and duration may have to be adjusted for disease severity, age, and/or co-morbid conditions.
NA = not available.

Integrated Delivery Systems: One Staff's Experience

James G. Pitcavage, MD

Many hospitals and medical staffs have established a physician-hospital organization (PHO) or are discussing the development of one to facilitate contracting with managed care organizations. Physician leadership is essential in the establishment of a PHO in order for physicians to maintain control over patient care. This article describes how one medical staff—at Sewickley Valley Hospital—formed a PHO with its hospital and then a network with other PHOs. It also explains how physicians play an active role in the organization.

In 1980, physicians on staff at Sewickley Valley Hospital had a number of concerns, among them loss of patient volume and the hospital's interest in recruiting physicians to the area. The administration also had concerns, including market competition from other hospitals and physician loyalty. Both the hospital and the medical staff were concerned about the growth of managed care, a growing trend of shifting economic risk from payers to providers, and a fear that if providers do not find a solution to the rising cost of health care, the government will.

The medical staff and hospital determined that there were a number of positive reasons to establish an organization:

- It would place the hospital and medical staff in a better position to deal with health system reform.
- The organization would be better able to address problems that surfaced.
- It would create economic incentives for the hospital and physicians to succeed.
- Physicians' practice costs would be reduced through bulk purchasing.
- The hospital and medical staff would have more leverage with managed care organizations due to the ability to provide data on cost and quality of care.

Establishing the organization

The medical staff and the hospital established a hospital/physician joint venture (HPJV), which is a forerunner to what is now generally called a physician-hospital organization (PHO).

The HPJV was incorporated as a separate organization controlled by shareholders, with ownership allocated at 50 percent hospital and 50 percent physicians—physicians must purchase a share in the PHO to become a member. The hospital and physicians are equally represented on the HPJV board, and the physician board members are elected by the physician members of the organization.

Initially, membership in the HPJV was offered to the entire medical staff. Potential members were told that credentialing standards would be developed that would be applied to everyone and that those not willing to comply with standards would be asked to leave the organization.

The primary function of the HPJV was to develop opportunities to contract with managed care organizations. It also purchased computers, lab equipment for the hospital and physician offices, and whatever else was needed.

Expanding the organization

The medical staff and hospital found it very difficult to market a single PHO. Because Sewickley Valley Hospital, a small 220-bed community hospital just north of Pittsburgh, does not have sufficient numbers of specialists on staff to provide a full array of services, the hospital and physicians decided to approach other community hospitals in the Pittsburgh area to test interest in forming a network.

In 1985, the ALPHA Health Network, a preferred provider organization (PPO), was founded by Sewickley Valley Hospital and six other community hospitals in the Pittsburgh area, all of which had formed an HPJV with physicians on their medical staffs. ALPHA is a not-for-profit PPO which directly contracts with employers, insurers, and third-party administrators on behalf of its network providers. Its mission is two-fold: 1) to develop a network of participating hospitals and physicians committed to delivering high quality cost effective health care; and 2) to design appropriate methods for

Dr. Pitcavage is chairman of the Society's Hospital Medical Staff Section Governing Council.
He wishes to thank Kipton Kaplan, president and CEO of ALPHA, for his input into this article.

quality assessment, patient referral, and utilization.

Organizational structure

ALPHA is made up of HPJVs which are responsible for creating internal procedures for reviewing clinical data and improving provider performance. The ALPHA board, made up of the CEO and a physician leader from each member hospital, provides governance and leadership and establishes direction for ALPHA's managed care initiatives. ALPHA has a Medical Advisory Group (MAG) and a Quality Assurance and Improvement Committee.

The MAG, which is made up entirely of physicians, develops the credentialing standards for all physicians who belong to ALPHA. It also:

- defines medical policy for the HPJVs;
- provides a link between the HPJVs and ALPHA;
- reviews network needs;
- decides what clinical services ALPHA can and cannot provide, and should and should not provide;
- develops the medical criteria for use in utilization review;
- serves in an advisory capacity to ALPHA management and utilization review nurses; and
- serves as an appeal board for all determinations of inappropriate care for payers who utilize the ALPHA medical management process.

ALPHA's Quality Assurance and Improvement Committee is a subcommittee of the MAG, comprised of at least one physician from each hospital in the ALPHA network and a quality assurance coordinator. Its responsibilities are to:

- review and analyze outcome data, and present its findings to the MAG (the MAG has authority to go back to the HPJV if there is a problem);
- determine methods for corrective action;
- design programs to educate physicians, nurses, and hospitals depending on where the problem lies; and
- look at best practices and best results.

The Quality Assurance and Improvement Committee uses MedisGroups data, claims information, hospital reports, and medical charts to compare acceptable standards and the medical results of each network physician and hospital. When a need for improvement is evident, ALPHA providers are counseled by their peers to modify their practices and procedures, or pursue alternative methods of treatment. When hospitals and physicians demonstrate superior medical outcomes, other providers in the network are encouraged to use this information to improve their own patterns of treatment.

Benefits of establishing a network

Establishing the ALPHA Health Network has been very beneficial to Sewickley Valley Hospital and its medical staff. It provides the specialists needed to effectively compete for managed care contracts, as well as a vehicle for information sharing and collaborating among hospitals and medical staffs. Sewickley Valley Hospital was able to improve its pneumonia outcomes as a result of this information sharing.

The network has also enabled the medical community to provide wellness and immunization programs, and weight and high blood pressure clinics, which are difficult for physicians as individuals to provide.

The ALPHA network has also been successful in the western, central, and northeast regions of the state. It is the thirteenth largest provider-sponsored PPO in the nation and serves over 147,000 enrollees across Pennsylvania. ALPHA's members include over 2,000 physicians, 16 member hospitals, and more than 50 contract facilities for specialty, ancillary, and diagnostic services.

Managed Care Resource Kit Available

As physicians' involvement with managed care increases, so does their need for information and guidance. The State Society has created the Managed Care Resource Kit to give physicians a condensed source of knowledge that can contribute to survival and success in a managed care environment.

The kit is free and available only to Society members. For content information or to order, call the Department of Physician Services at (800) 228-7823 or (717) 558-7750.

How ALPHA Functions

ALPHA is a not-for-profit preferred provider organization (PPO) that directly contracts with employers, insurers, and third-party administrators on behalf of its network providers. It does not process claims or underwrite benefits, but does provide the claims administrator with all cost documentation required for timely and efficient claims processing.

Contracting process

ALPHA facilitates the process of establishing relationships with multiple payers. To accomplish this, network providers grant ALPHA a limited power of attorney to negotiate contracts on their behalf. The fee schedule used by ALPHA was developed and is maintained by an independent third party designated by ALPHA. Contracts negotiated cannot differ substantially from a master agreement approved by the providers. Additionally, each contract includes an "opt-out" clause which a provider can use if a payer cannot accept the standard agreement. If ALPHA negotiates a contract that differs from the standard agreement, the providers in the network are notified of the changes in writing and given the opportunity to accept or reject the contract. Individual physicians and PHOs are not prohibited from contracting with other third parties.

Utilization management program

A utilization management program was established by ALPHA and its hospital/physician joint ventures (HPJVs) to control the cost of health care services available to purchasers from network providers. A primary component of this program is the Benefit Management Service (BMS). This service is staffed by registered nurses who counsel individuals regarding cost effective procedures, and direct patients to ALPHA member hospitals and physicians. Also, they answer specific questions and assist in patient referrals. A payer may define its own utilization program which may or may not be administered by the BMS.

Negotiate from Strength: Physician-Led Integration

The Health Care Group

Health system reform is likely to be a complex process that will take place over a number of years—not in a single bill passed by Congress. As this process unfolds, market forces are already changing the way physicians practice medicine.

In response to the new realities of medicine—including the proliferation of capitation payments, utilization reviews, and emphasis on outcomes management—hospitals, physicians, and insurers are reevaluating their traditional business relationships and positioning themselves most effectively for a sea of change.

Employer initiatives

Many of these new alliances have become quite visible, such as employers in major cities who have begun to mandate change. Eager to achieve cost-effective health care, large employers are negotiating directly with selected hospitals and doctors. These companies want to secure a package of services based on high-quality standards at a fixed price. If the provider is unable to accommodate them, they simply look elsewhere in the market.

In Rochester, New York, for example, pressure from companies like Kodak, General Electric, and Bausch and Lomb is accelerating the acceptance of managed care—and even creating a "lock-out" for some medical groups. Using community-rating, these companies are mediating between medical groups and insurance companies to contract for services at a competitive price. As a result, the city of Rochester boasts the highest health maintenance organization (HMO) enrollment in the country—54 percent, according to a Group Health Association of America report released a year ago.

Hospital-directed groups

Hospitals across the nation are also taking an active role in shaping new formats for aligning themselves with physicians. Motivated by the fear of exclusion and loss of control (or even existence) in a capitated environment, many hospitals are acquiring practices at a rapid pace. With advantages of capital resources and information to cement these relationships, hospitals are also successfully enticing physicians to join hospital-based networks such as physician-hospital organizations (PHOs) or management service organizations (MSOs).

However, these models are often designed to primarily serve hospitals' interests. In these types of organizations, most policy and strategy decisions are made with the hospital's priorities in mind—not the physicians'. Designed with 50/50 hospital/physician representation on the board, the appearance of fairness is maintained. But when key questions are presented, the hospital representatives are likely to vote as a block, and at least one physician is likely to "defect."

While many hospitals have enticed doctors into joining a hospital-based network by focusing on fear of exclusion, the "sales-pitch" that doctors need hospitals in today's changing environment is misleading. After all, hospitals are essentially *physician-driven*, and doctors make all the decisions on patient care. Doctors make hospitals efficient, not vice-versa. They fill beds, and order laboratory services and tests. Patients—more often than not—are loyal to their doctor, not a hospital.

Moreover, aligning oneself with one specific hospital carries certain risks. In a capitated environment, where hospital stays are minimized and outpatient procedures are maximized, signing on exclusively with a hospital that may not stay financially secure could seriously jeopardize your financial viability. On the other hand, a physician with multiple hospital alliances may be seen as not on anyone's team and thus risk being excluded from each hospital's efforts at integration.

Physician-led integration

Given the surplus of beds and the resulting precarious nature of a hospital's economic stability in a capitated environment, physicians need to take control of their own destiny. In hospital-based affiliations, hospital administrators will ultimately need to place organizational needs ahead of physician needs. By taking the lead and forming physician-led, -directed and -controlled groups—whether they be very large single-specialty groups, multi-specialty

Society Offers Integration Expertise

The professional staff of the Pennsylvania Medical Society is ready to assist counties societies, hospitals medical staffs, and other physician groups in understanding the complexities of developing integrated delivery systems.

The Society has formed Penn Med Members Services Company to consult with physicians on taking the lead in integration. Also, speakers from the Society's Policy and Programs, Governmental Affairs, and Professional Relations divisions are available to make presentations to various-sized groups.

For more information, call the Society at (800) 228-7823 or (717) 558-7750.

groups, or all-inclusive physician networks—doctors can secure market share and maintain full professional autonomy.

Not only do these types of groups control clinical and professional decisions, they significantly strengthen their financial and bargaining power when negotiating with other groups, such as HMOs, insurers, and hospitals. While it is sometimes difficult to overcome old distrusts, when physicians understand that they can have a voice in how care will be delivered and how finances are handled, they will readily move into an integrated system.

An example to emulate

While many physician groups are forming and gaining momentum, the Mullikin Group, based in Los Angeles, is particularly noteworthy. Starting with 35 doctors in 1991, this group has grown into a mega-practice of 3,000 employees that is physician-led, -controlled, and -directed. The group merged medical groups all over Southern California under a physician ownership model that hasn't, until recently, involved an outside hospital, health system, foundation, or public offering.

One of the keys to their success is their heavy base of primary care physicians—nearly 60 percent. This group is enjoying the advantages of significant geographic scope, heavy concentration of primary care physicians, and leverage in negotiating with HMOs. In short, they are putting together the deals with hospitals, and they are steering the ship.

Other groups, such as the Mayo Clinic, Geisinger System, the Texas Back Institute, and the Cleveland Clinic, have earned superior clinical reputations as they capitalize on economies of scale. More importantly, these groups share a vision of how physicians view their role in the coming years, and an understanding that initiating change gives them more control than waiting for change to happen to them.

Be a reformer

The message here is simple. Be a reformer. And be first. If hospitals set up a network before you do, you will be fighting two battles—payers on one front and competing health plans on the other.

An organized group of physicians with convenient, high-quality products has tremendous clout and appeal. Controlling your own destiny through physician-led integration carries with it some risk—but it is not really as risky as ignoring change or waiting until change takes place without you.

The contributing authors, Geoffrey T. Anders, JD, CPA, CPBC, and Michael J. Parshall, are consultants with The Health Care Group, a medical practice management consulting firm based in Plymouth Meeting.

More Details: Governor's Proposal Scrutinized by State Society

In the year since announcement of Governor Casey's health system reform proposals, much state as well as national debate has occurred. Last issue, we began a synopsis of the State Society's most recent responses to the governor's proposals, Senate Bill 1202 and House Bill 1958. This is a continuation of that discussion of specific aspects of proposed reform plans for the commonwealth.

Insurance Market Reform

Under the governor's plan, health care networks would be subject to insurance market reforms that have become virtually standard in health system reform proposals: open enrollment, guaranteed continuity/renewability, a pre-existing condition exclusion prohibition, and community rating. Networks also must enroll a demographic cross-section of the population of their region.

The State Society supports insurance reforms of this nature. The regions would permit limited geographic adjustments. Consideration should also be given to allowing for age adjustments—to avoid dramatic premium increases for young persons.

One of the few advantages of experience rating and medical underwriting is that they provide some incentives for employers to offer employee wellness programs and for employees to live healthy lifestyles. New incentives will need to be put in place when community rating is required. For example, we support a premium surcharge for smokers. Plans should also be permitted to give discounts for healthy behavior and participation in wellness and early screening programs.

We further support the development of innovative insurance products such as permanent (pre-funded) health insurance. It has the potential to be less expensive in the long run, as income earned on the subscriber's equity can be used to reduce or eliminate the premium over time. The equity could also be used to pay the premium during short-term periods of unemployment.

Bureaucratic Intervention

Premium controls

The Health Security Board must approve the rates charged by health care networks. The board could modify rates and establish an index limiting yearly rate increases.

The Casey proposal includes many elements similar to those in the "managed competition" model—a health system reform model designed to control costs through competition. However, the proposal also includes a number of provisions that evidence a lack of confidence that competition will be effective in controlling cost. The premium controls are one example.

Physicians are eager for a reformed health care system in which we can compete on the basis of both price and quality. We also have long advocated a number of other measures that would bring health care costs under control, including tort reform, cutting government red tape, slicing administrative paperwork and hassles, and promoting healthy lifestyles.

However, the Society opposes global budgets—set through premium controls or otherwise—especially inflexible, arbitrary caps that are based upon economics, as opposed to the health needs and demands of the population. Premium caps do not correct the underlying causes of rising costs, and will inevitably result in arbitrary rationing and reduced quality and access.

Underserved areas

The Health Security Board is authorized to take several actions under the pretense of stimulating competition in underserved areas, including financial incentives to encourage providers to locate in underserved areas, exclusive service franchises, regulation of provider payments and capital expenditures on plant equipment, and recommendations for preferential treatment of certificate of need requests.

We oppose exclusive service franchises and regulation of provider payments. Both unduly restrict competition and free-choice. Moreover, history has repeatedly proven that price controls are not effective in controlling costs and inevitably lead to harmful results, including reductions in quality, access, and investment in facilities and new technology. In sum, these measures simply replace one set of problems with a worse set of scenarios.

Instead, the board should stimulate competition in underserved areas by providing grants and loans to encourage the formation of physician networks in these areas.

Quality Assurance

Under the governor's plan, health care networks would be monitored and regulated in a manner similar to health maintenance organizations (HMOs) in the existing system. The proposal also relies heavily on the collection, analysis, and public dissemination of outcomes data to protect quality.

As noted, the Casey proposal is a variation of the "managed competition" model, with a heavy emphasis on "managed." Both the bureaucratic intervention aspects of "managed"—especially the premium controls and the mandated managed care—and the premium bidding wars that may result from "competition," raise quality concerns that demand close scrutiny of the promised quality assurance components. For the reasons discussed below, we believe that quality assurance components of the Casey proposal are inadequate. Quality cannot be assured without both scientifically sound health outcomes data and safeguards to protect against networks sacrificing quality to reduce costs.

Network "report cards"

The Health Security Corporation would assume the authority and

responsibility of the Pennsylvania Health Care Cost Containment Council (PHC4), and provide enrollees with cost and quality information similar to the report cards in President Clinton's proposal.

The Society supports the collection, analysis, and appropriate use of health outcomes data. However, we have several concerns:

- It is critically important that outcomes data be comprehensive, accurate, and reliable. Otherwise it does not serve any useful function, and will lead regulators and consumers to make arbitrary decisions based upon invalid data. While many of our initial concerns with PHC4 data have been resolved—especially since the creation of a technical advisory committee—the usefulness of the current data reports is limited.
- The problems with current PHC4 data are largely due to the imperfect state of the art. Although considerable advances have been made in outcomes measurement, and the data from many systems can be very useful in educational feedback programs, the current state of the art has not reached the point that outcomes data can be used to truly measure or compare quality.

For example, current PHC4 data does not adequately adjust for severity. In addition, the mortality data heralded by PHC4 tells little about other important outcome considerations such as morbidity (complications) and the general quality of life faced by the patients who survive. Reliable measures of these other considerations have yet to be developed and more research is needed.

- While we are optimistic that research will enhance the effectiveness of current outcomes measurement techniques, even future refinements may be inadequate. Indeed, quality of life may never be reliably measured. The quality of a patient's life cannot be evaluated by simple blood pressure readings and other objective tests. Quality-of-life evaluations require a host of complex and often subjective considerations that may be impossible to translate into a uniformly applied, numerical system for computerized comparisons.
- Outcomes data must be released to consumers in a format that is readily understandable to people from a wide range of educational backgrounds. The need for consumer understanding is especially critical now, since the current state of the art severely curtails the legitimate uses of the data.

Limited quality safeguards

Health care networks would be required to be licensed as HMOs, have a quality assurance plan that looks at both over- and under-utilization, and contract with a sufficient number and variety of providers, including primary care physicians and pediatric specialists.

The techniques and incentives employed by managed care systems to reduce inappropriate utilization can also jeopardize appropriate utilization when adequate safeguards are not in place. Consequently, safeguards are essential to ensure that managed care efforts to control insurer costs do not sacrifice quality and access.

These safeguards must include preventive, prospective measures—not just the after-the-fact review provided by data analysis. As discussed above, current quality measurement systems are imperfect and may never be developed to the stage that quality can be truly measured—let alone effectively used by consumers.

In any event, it will take time to identify and eliminate plans that provide poor quality care. In the meantime, patients may be irreversibly injured by the denial of medically appropriate care.

We are pleased by the inclusion of some prospective safeguards in the governor's reform proposal. However, far more protections are necessary. The proposal ignores many of the safeguards that we recommended in our managed care paper, including those pertaining to credentialing of network providers, utilization review, and reimbursement incentives.

Practice Parameters

The Health Security Board is charged with coordinating the development and implementation of practice parameters.

We support the development of practice parameters. They have the potential to both increase quality and reduce costs. However, we have several concerns—including the lack of safeguards to assure appropriate development and use.

- Practice parameters are guidelines—not standards of care. They should not be adopted as a clinical rule or used as a per se indicator of a quality or utilization problem, except in limited situations where variation is deemed by the preponderance of medical opinion to be inappropriate in any clinical situation. Physicians and other medical providers generally must be given the leeway to deviate from practice parameters when their patient's unique condition warrants a different course.
- While the potential of practice parameters is promising, they also have limitations and are untested. The management of many patients is not conducive to even general definition. In addition, practice parameters have yet to be extensively tested and might backfire.
- The board's role and responsibilities need to be better defined. The success or failure of the current and future parameters will also rest on the development process. Proper development demands research of the relevant scientific studies, practical clinical experience, and expert opinion. Parameters also must be regularly reviewed and updated to ensure that they remain relevant and do not hinder medical progress. Physician organizations must be included in the process. They possess both the requisite knowledge and the broad-based representation necessary to achieve consensus.

Limited Administrative Relief

The Health Security Board would be required to establish uniform explanation of payment forms for use by health care networks when they reimbursed providers.

We have advocated a uniform explanation of medical benefits form for some time. However, the proposal does not address the full scope of administrative relief the Society has advocated to reduce administrative costs resulting from claims processing and managed care requirements. "Hassle" protections are especially critical in the governor's proposal—as the mandated managed care requirement is likely to intensify hassles.

Reform Debate Touches Pennsylvania

David Woods

The campaign to foster support for President Clinton's health system reform plan is making headlines around the nation. A recent stop by Clinton officials at a Philadelphia forum generated this report. More than 400 people representing the medical profession, insurance industry, and public attended the forum entitled, "The Health Care Dilemma: Problems at Home, Lessons Abroad?"

The United States is attempting to restructure a health care system which, at close to one trillion dollars a year, equals the world's eighth largest economy, according to William Kissick, MD. He told participants at a February 15 forum, sponsored by the World Affairs Council of Philadelphia, that the system can expect to fulfill only two of the three criteria of access, quality, and reasonable cost.

Dr. Kissick, professor of public health and preventive medicine at the University of Pennsylvania, and a professor of management at the Wharton School, was one of two physicians who helped draft the original Medicare legislation. He described that legislation as having failed to detect three trends—technology, utilization, and demography.

Noting that the United States now spends considerably more on health care than on education, Dr. Kissick said that by the year 2000 we'll have a well-medicated but illiterate population whose economic ascendancy will have been eclipsed by Japan, Korea, and Germany. Since no society is capable of providing all of the health services a population demands, he said, choices will have to be made in any restructuring of health care. He predicted an end to fee-for-service solo practice, a shift in medical education towards production of more primary care physicians than specialists, and the use of nurses to treat the elderly.

Whatever the challenges of health system reform, "at the end of the day," the Clinton plan will be adopted, keynote speaker Ira Magaziner told the meeting. Magaziner, senior adviser to the president for policy development and principal strategist for the health system reform package, said that the much-criticized strategy of presenting a detailed—1,300 plus—page report was so the people know what's being proposed. Past efforts at social reform, he said, have been presented in skeleton form and then subjected to 10,000 pages of regulations.

Acknowledging that there are items that may be unwise in the bill, or that can be improved upon, Magaziner said that the underlying principles of reform will be enacted. Those principles, he said, are:

- universality;
- community rating, so that age and health status don't affect eligibility or cost;
- comprehensiveness;
- control of the rate of cost increases;
- choice (of plan and of physicians);
- simplicity (one universal claim form);
- quality—what Magaziner called moving away from the micro-management of "checkers checking the checkers checking the checkers" to outcomes-based criteria; and
- responsibility (an emphasis on primary and preventive care).

Magaziner said that a cap on the growth of premiums would put some discipline into the system, and increased competitiveness would "put the consumer into the driver's seat."

Noting that the Clinton health system reform team has seen 1,400 different special interest groups, Magaziner concluded that change won't be easy—"It'll be like a hurricane on a roller coaster"—but that we're going to have reform because the people want it.

Later, at a panel discussion on what Americans could learn from other countries, Ontario Medical Association president Tom Dickson, MD, said that government imposition of "hard caps" on hospitals and physicians has meant that fee schedule increases for Ontario doctors will work out to 0.8 percent a year from 1988 to 1996. As the U.S. moves to broaden coverage, the Canadians are moving to narrow it, said Dr. Dickson, with the "de-listing" of procedures such as routine newborn circumcision and reversal of sterilization.

He warned that U.S. physicians should jump right into the debate on health system reform, lest they be the object of the same kind of unilateral decisions about their professional lives as has been the case in Canada. In 1993, he concluded, a record 650 Canadian physicians emigrated—a luxury that presumably their American counterparts do not have.

The author is president of Healthcare Media International, Inc., Philadelphia, and a former editor-in-chief of the Canadian Medical Association Journal.

AMA STUDY SHOWS GROWTH IN GROUP PRACTICE

With health system reform on the horizon, a third (33.4 percent) of American physicians in the direct care of patients are now involved in group practices, compared to 18 percent in 1969, according to a new AMA study.

"Physicians in Medical Groups: A Comparative Analysis 1993" finds that physicians in group practices—defined as three or more physicians—feel less restrictions on their autonomy, are more likely to be board certified, more likely to contract with health maintenance organizations, and tend to have somewhat higher incomes than physicians in solo and other practice settings. The study sees the trend toward group practice accelerating under health system reform.

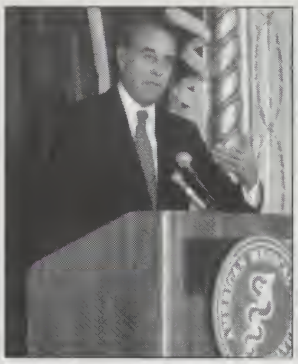
The study also finds a third (34 percent) of American physicians still

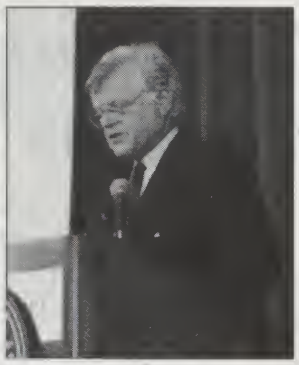
in solo or two-physician practices, while 32.6 percent practice in other patient care settings, such as hospital employment or under temporary employment arrangements.

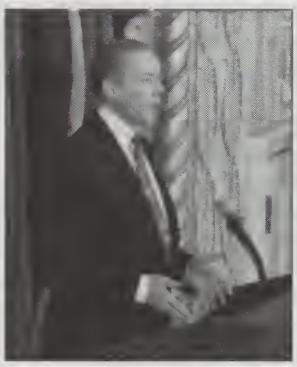
Those in group practices report seeing more patients than their colleagues in solo or two-physician practices, according to the publication. Their patients, on the other hand, wait longer for appointments and longer in waiting rooms.

The study further investigates the demographic and professional characteristics of physicians in group versus solo or two-physician practices, and examines relationships to different managed care environments, such as the presence of an HMO or PPO contract and perceived clinical autonomy.

For more information about "Physicians in Medical Groups: A Comparative Analysis 1993" (AMA publication OP#392993CH), call the AMA at (800) 621-8335.







Senators Bob Dole (R-KS, top left), Orrin Hatch (R-UT, bottom left), and Edward Kennedy (D-MA, top right) were among several U.S. congressmen and AMA leaders to address health system reform at an AMA rally, "Partnership in Action: Uniting for America's Health," held on March 8 in Washington, DC.

Senator Dole said that while he doesn't think the health care system is in a "crisis" yet—i.e., it is not ready to collapse—he does believe some sort of a reform bill will pass Congress this year. He didn't elaborate. Senator Hatch, however, believes the U.S. system is on the verge of catastrophe, and he is concerned. He said the "wrong decision" about reform "will set us back" for a long time.

Senator Kennedy, in an interview with *American Medical Television,* said he "hopes doctors realize that this is an opportunity to get comprehensive health care passed. There will never be a balanced budget in the U.S. until health care costs are under control."

Members of the Society's board and alliance, as well as other physician leaders from across the U.S., attended the event. **For commentary, see page 6.**

Reform Resources Available from the Pennsylvania Medical Society

- **Exploring the Issues in Health System Reform.** Full-color brochure designed to help Pennsylvania physicians talk to their patients. To order, call the Division of Communications and Public Affairs at (800) 228-7823.

Reform Resources Available from AMA

The following health system reform materials are available at no charge to physicians through the AMA Health Policy Resource Center. To order, call (800) 262-3211.

- **Providing Health Coverage for All Americans: Health System Reform Proposal for Action.** 8-page booklet. Publication #101.
- **A Message to My Patients: We Need a Better Health Care System.** 4-page patient education brochure. Publication #102a. (A packet of 25 copies of the brochure is also available. Ask for #102b.)
- **Moment of Trust Ads.** Four different 8½ x 11 ads calling for reform. Suitable for framing or copying. Publication #103.
- **AMA Analysis of the Clinton Plan.** 25-page, side-by-side comparison with the AMA position. Publication #104.
- **Comparison of Congressional Health Reform Proposals.** 83-page, side-by-side comparison. Publication #105.
- **Advocacy Briefs.** Provide responses to frequently made statements and give supporting arguments. Topics available: U.S. and International Health Spending (#111), Health Reform Glossary (#112), The Impact of Violence (#113), Medical Technology (#114), Physician Income (#115), and Professional Liability and Access to Care (#116).
- **Policy Briefs.** Outline issues and background information. Topics available: Health Care and the Economy (#117), Administrative Costs (#118), Price Controls in Health Care (#119), Managed Care Plans (#120), and Nurse Practitioners and Physician Assistants (#121).
- **Fact Sheets.** Topics available: How U.S. Health Dollars Are Spent (#131), Estimated Health Care Costs Related to Lifestyles (#132), Who Pays? (#133), and The Insured and the Uninsured (#134).

PMSLIC: Focusing on Physicians' Needs

Betty L. Cottle, MD

The malpractice world is changing, and physicians are asking: How do I choose the right carrier for me? To help physicians answer that and related questions, the chairman of the board of the Society's liability insurance company offers this overview of the company's basic philosophy and focus.

As new carriers enter the malpractice insurance market, and others market more aggressively in order to compete, there may be a growing sense of confusion among physicians: Should I care about a rating by some organization I know nothing about? What does it mean to me to have a consent provision? How can these rates be so much lower? Which carrier will best represent me and my interests?

The Pennsylvania Medical Society Liability Insurance Company (PMSLIC) is the answer. As the wholly owned subsidiary of the State Society, through its subsidiary PennMed, we are the carrier focused on physicians' individual needs, as well as those of the physician community.

We were formed when physicians needed a carrier that could be there through thick and thin, and we were capitalized by contributions of the State Society's members. Our board of directors consists exclusively of physicians, with the exception of the president of the company and the executive vice president of the Society, and, as a result, board committees are comprised of physicians practicing medicine in Pennsylvania. Our operating decisions are made by physicians. PMSLIC is committed to Pennsylvania physicians. We are here for the long term.

We take every appropriate step to minimize the costs of liability insurance, and many of the steps we take are a direct challenge to the status quo. We operate on a not-for-profit basis using all investment income to offset expenses for our physician insureds. This operating philosophy has been recognized by A.N. Best, one of the premier "rating" organizations, which rates PMSLIC an NA-4.

An NA-4 rating is assigned to a company "when the nature of its business and/or operations is such that our normal rating procedure does not properly apply." We set out to challenge the industry that had left physicians stranded, and we have done so.

Think of it: The industry failed physicians. Now, companies which follow the standards—the *for-profit* standards—of that very industry trumpet that success as a reason for you to buy their product. That simply makes no sense.

Physicians direct PMSLIC. Physicians who are practicing medicine just as you are; who face the same changes in that practice, the same cut-backs in fees, the same questions about liability and a crazy court system. They look for every prudent way to reduce costs of insurance, for all insureds—including themselves.

Fighting the tough fight

There are many ways to hold the line on costs. First is peer review, with physicians and a carrier willing to fight the tough fight. PMSLIC is a recognized leader in terms of trying the case no one else would try...and winning! We can do so only because we have reviewed the case for medical merit and because our physician insured has been involved in the evaluation from the start.

Physicians make claims and underwriting decisions. Each decision is communicated to the insured *before* action is taken. Every insured has the opportunity to meet with the physicians on the committee to review the decision, and has recourse to an independent body of the Society (Professional Liability Insurance Appeals Committee or PLIAC) for a final determination of an issue. No claim will be settled without the consent of the insured or a final resolution from PLIAC.

There is no question that PMSLIC is the quality carrier. Our claims results match or exceed those of other carriers. Our coverage is geared to all aspects of the practice of medicine. We have stayed true to our philosophy of identifying meritorious claims and moving expeditiously to resolve same while vigorously defending all claims which lack medical merit. We have always been willing to pay the defense costs associated with defending even the smallest monetary value claim. No claim is "small" in the eyes of the physician defendant.

Dr. Cottle is chairman of the board of the Pennsylvania Medical Society Liability Insurance Company.

Sometimes, of course, physicians prefer to settle claims even when they believe that the medicine was appropriate. The advent of the National Practitioner Data Bank, increased use of managed care entities which appear to credential based on economics or superficial claim analysis, and increased activity by hospitals to buy practices and bring physicians within their fold, all cry out for a carrier which represents the interests of physicians.

We believe that physicians and medical staffs must have input and collaboration in the process of medical malpractice defense: This is a cornerstone of our existence. Also, we believe that physicians should be involved in the defense of a claim throughout the process. At PMSLIC, no defense counsel firm is approved until interviewed by the Claims Committee, made up of eight physicians. We pride ourselves on the monitoring, quality, and relationship we have with these firms.

We avoid tying ourselves to a single firm. It is essential to have a number of law firms available to represent the unique needs of physicians.

We constantly look for different ways to approach litigation. There is no single answer which always works, and the paramount need has to be to fully represent the interests of each and every insured—which sometimes, simply put, costs a lot of money.

We have developed a reputation for standing by our decision to defend good medical care—trial judges and plaintiff trial lawyers throughout this commonwealth know that PMSLIC means business. We firmly believe that the costs associated with defending good medicine are a sound investment, not only because we are protecting the interests of our physician insureds, but also because it reduces the number of claims, particularly those with doubtful liability.

Risk management

Another method of cost reduction is to reduce the risks of practice. Our risk management programs are unsurpassed. Expert medico-legal advice is just a phone call away. We offer educational programs which have been purchased by other physician groups and carriers. PMSLIC focuses on supporting physicians as they encounter the uncertainties of practice and the often bizarre impact of the legal system upon the practice of medicine.

To encourage participation and education, we offer programs for premium discounts and Category 1 CME credits, a risk management newsletter, reports identifying specific risks based on nationwide statistics and results; the Laws and Regulations Affecting Medical Practice, and many other materials and services.

More dividends

Yet another method of cost reduction is the payment of policyholder dividends. These dividends reflect our dedication to charging the right rates and returning any amount not needed to the insureds. This year, we declared our third policyholder dividend in the amount of 10 percent of premium.

One might ask why other companies are offering some physicians rates substantially lower than PMSLIC. The answer is simple. A look at the rates filed with the Insurance Department shows that all filed and approved rates for the major carriers are in the same range. That means that rates supported by actual claims experience are substantially the same.

Right now, some carriers are offering discounts of 30-40 percent routinely! But if the rates filed with the department are correct—and they are based on each company's own experience—then the discounted amounts being charged under these programs cannot be based on this experience. The last time this industry was so driven was in the seventies, and we all know what happened then.

One-stop shopping

Of interest to many is that we offer "one-stop shopping" through our membership in the Pennsylvania Medical Society family. In addition to our professional liability insurance, the Society offers a full program of other insurance products. A simple review of the publication "Resource Guide for Pennsylvania Physicians," mailed to every member, will outline the many products and services available. One need look no further than the family of the Pennsylvania Medical Society to meet all practice needs.

PMSLIC has been chosen by more independent practicing physicians than any other carrier in Pennsylvania, because of our quality, our advocacy for physicians, and our financial strength. Choosing another carrier may save money in the short run, but talk to your colleagues who are returning to PMSLIC after a stint with a low-cost carrier because they received unsatisfactory representation on a claim, or inflexibility in underwriting, or lower quality service. Is your practice and the protection of your assets something you will leave to the lowest bidder? ⬡

"The real world is that managed care is here... Capitated payments limit what doctors can do and will encourage more medical malpractice... reform without liability reform is a mirage, and it 'ain't gonna happen.' "

—Dr. Cottle, to the state's Senate Public Health and Welfare Committee at its February meeting on medical liability reform

Recognizing the Uncertainty of Medicine's Future

Maria T. Montesano
Assistant Managing Editor

Next month
Look for profiles of newly elected resident physician, Joyann A. Kroser, MD, and newly elected medical student trustee, Stacy L. Krisher.

In this second of three articles profiling the State Society's newly elected board members, John R. Martell Jr., MD, Young Physician Section trustee, discusses his medical training, his trustee position, and the importance of physician involvement in organized medicine.

Five years ago, John R. Martell Jr., MD, took a long, hard look at the future of his profession. Seeing overwhelming changes and the uncertainty of practicing medicine into the twenty-first century, he decided to join the federation of medicine—to get involved. "If you're not part of the solution," he says, "then you're part of the problem." Today he's committed to being part of the solution: He represents young physicians as a trustee to the State Society's board.

Dr. Martell joined the board last July, replacing Richard J. Greco, MD, who moved out of state before his term expired. Dr. Martell says he sought the trustee position because he feels it's important that young physicians have a voice in organized medicine. "We're the ones who are going to be facing whatever changes are made, and we need to have a voice in the decision-making process," he says. He was officially elected to the position by the Young Physician Section at the October annual meeting.

Dr. Martell

Training in medicine

Dr. Martell, a native of Elizabeth, says he was focused on a career in medicine by the time he got to high school. He received his bachelor's degree in biology from the University of Pittsburgh and his medical degree from Jefferson Medical College of Thomas Jefferson University.

He then served eight-and-a-half years of active duty in the U.S. Army, including an internship at William Beaumont Army Medical Center, El Paso, Texas, and a residency in orthopedic surgery at Dwight D. Eisenhower Army Medical Center, Fort Gordon, Georgia. He says he chose orthopedics because he enjoyed surgery, and orthopedics offered "a full spectrum of treating the musculoskeletal system."

One of his strengths as an orthopedic surgeon, he says, is his ability to "think" in medicine—a concept he learned from Anthony Ballard, MD, one of his professors at Jackson Memorial Hospital in Miami, Florida.

"Dr. Ballard really impressed me," Dr. Martell says. "In a lot of training situations, you are not encouraged to think; instead, you are encouraged to do things the way whoever you're training under does them."

He says Dr. Ballard stressed that the procedure was not as important as the logical thinking that brought his students to a conclusion. "Dr. Ballard would say, 'Present to me what you think should be done, let's discuss it, and if you are right, we'll do it.' Now, with the orthopedic residents at Allegheny General, I follow that teaching philosophy as well," he adds.

As a trustee, he says he is challenged because of his "surgeon's mentality." He explains, "If I identify a problem, I want to fix it,

and it doesn't take me a great many steps to go from point A to point B. But this process isn't always like that. Change often takes years to accomplish."

He believes Society members are often discouraged by that time factor: "They see a problem, and question why we can't fix it or fix it *quicker.* They need to understand the process—that if a law is written, you can't just say it's a bad law. You have to go through a series of legislative maneuvers to get that law taken off the books or changed. It's a challenge for most physicians to understand that, because we tend to be very aggressive individuals...I certainly didn't have a handle on that before I got involved in the Society."

Learning from military medicine

He calls his medical training in the military "excellent, hands-on training, that taught me that I could exist in several different environments."

Over and over again, however, we hear that there is much to be learned from military medicine when it comes to health system reform. Dr. Martell views the U.S. veterans' and military medical systems as "socialistic types of medical practice [that] no one will really look at." He emphasizes one on-going problem he encountered during his Army experience—getting instruments and equipment. "When I would get to a new facility, I would ascertain the equipment I would need to do my job," he says. "But the equipment never got there when I was there. Most of the time, it would come as I was going to my next duty assignment."

"Getting the government more involved in the health care delivery business frightens me," he says. "If you put budgetary constraints on things, then you have to be willing to wait. I don't think the American public is prepared for that."

The Society's most important role in reform, according to Dr. Martell, is to educate its members about managed care options. "Pennsylvania as a whole is probably behind in many areas of managed care," he says. "I know the Pittsburgh area is probably less than 12 or 13 percent managed care, and that has the potential under health system reform to dramatically change. Physicians are not attuned to what those changes are going to mean to the practice of medicine, and we're going to need help sorting things out and understanding the various group arrangements...Joining them will significantly impact our medical practices, and we will have to live with that. The more we understand up front, the less we'll have to regret later on."

The uncertainty of the future

The uncertainty of the future is especially distressful to young physicians, as mentioned earlier—but again, Dr. Martell says education by the Society can help. "I think that, in change, there is an opportunity for younger physicians to control their practice of medicine. I just hope that we are prepared to take advantage of that opportunity."

"I want to see physicians take the lead in reform," he says. "We don't want to diminish the quality of medicine. Health care in the U.S. has to be some of the best in the world, if not the best. I hope that isn't forgotten in the rush to change things. I'd hate to see us move to a system that provides access to everyone at the expense of quality."

He is "somewhat disheartened" that it is difficult to get a group of physicians together on common ground. That makes it easier to separate them—"by specialty, by interest, by everything," he says. "When we were in medical school, we were all the same. And even though we have subspecialized, there has to be a common area that we can all fall back to, and build from there. If we don't, we will be 'pitted' specialty against specialty. Then we'll be doomed to a dismal failure."

Even in the clinical arena, there should be compatibility of specialties: Problems with immunizations shouldn't be a pediatrician's problem, and breast implants shouldn't be a plastic surgeon's problem, he says. "They should be *our* problems, and we should work together to deal with them. That's how you build common ground."

Dr. Martell would like to see physicians step forward and begin to assume responsibility for determining what will occur in the future. He says they need to know they can make a difference and get as many people involved in the political process as possible to ensure that medicine's voice is heard when health system reform hits in final form. "Our members need to be reminded that if they want to get involved, there are many different ways to do so, at whatever level they want—even if it's only at the local level."

But most importantly, regarding health system reform, he says, "We can't forget that our bottom line is taking care of patients. And we can't forget the patients—they have names and faces, they are *not* numbers in a computer somewhere. We can't lose that perspective." ⬡

"I'd hate to see us move to a system that provides access to everyone at the expense of quality."

—John R. Martell Jr., MD

Q&A SUPPLEMENTS NEW STATE HIV GUIDELINES

The Pennsylvania Department of Health in December 1993 released new "Guidelines for Preventing the Transmission of Human Immunodeficiency Virus and Hepatitis B Virus from Infected Health Care Workers to Patients." The following questions and answers are excerpted, with permission, from supplemental department materials.

Do the guidelines affect the responsibility of a health care facility to a health care worker infected with HIV in a manner which differs from the facility's responsibility with regard to any other health care worker?
A facility's responsibility toward an HIV-infected health care worker is, as for all health care workers, to assure to the extent possible a safe and healthful working environment. The guidelines, as well as the Americans' with Disabilities Act of 1990 and the Rehabilitation Act of 1973, preclude discrimination against an individual with a disability, including HIV. The guidelines recommend work restrictions only when there is evidence that an HIV-infected health care worker poses a direct threat to the health or safety of others, and that direct threat cannot be eliminated or reduced to a medically acceptable level with reasonable accommodations.

How can risk assessment be performed, as described in the guidelines, without jeopardizing the HIV-infected health care worker's confidentiality protections?
The Confidentiality of HIV-Related Information Act (Act 148 of 1990) (35 P.S. Section 7601 *et seq.*) imposes a duty of confidentiality upon those individuals who obtain such information while providing any health or social services. Subsequent disclosures are also prohibited without the consent of the subject, absent circumstances which permit disclosure without consent under Act 148 of 1990. Members of the department's expert review panel, as well as members of institutional internal assessment teams, must comply with relevant confidentiality standards.

Do the guidelines recommend mandatory testing of health care workers?
No. Mandatory testing is not an effective or efficient procedure for detecting HIV infection among health care workers. However, the guidelines do encourage health care workers at-risk to obtain HIV testing and counseling.

Under the guidelines, should a health care facility notify patients with regard to a health care worker with HIV or AIDS who has had extensive patient contact?
The guidelines recommend that retrospective notification of a patient is indicated only where there is evidence of significant exposure to that patient. They also recommend that any such notification should not be conducted until the department's expert review panel has completed its own assessment or evaluated the findings of an internal risk assessment team's findings suggesting notification.

Resource for HIV-Infected Physicians

HIV-infected physicians may call the Physicians' Health Programs (PHP) of the Society's Educational and Scientific Trust at (800) 228-7823 for confidential information, referral, and support services.

STUDY INDICATES RADON RISK HIGHER THAN THOUGHT

A new study, reported in the *New England Journal of Medicine* in January, has found that extended exposure to even very small levels of radon in homes can increase the risk of cancer.

Researchers analyzed radon exposures dating back to 1947. They found that residents of homes with 3.8 to 10.8 picocuries of radon per liter (pCi/L) of air had a 30 percent greater chance of having lung cancer, while residents of homes with levels above 10.8 pCi/L had an 80 percent greater likelihood of the disease. The Environmental Protection Agency (EPA) has set 4 pCi/L as the highest acceptable level of radon exposure before remedial action is suggested.

Authors of the article, "Alerting Patients to the Risk of Radon," which appeared in the June 1993 issue of PENNSYLVANIA MEDICINE, feel there is merit to the study. "Our concerns about radon levels from 4 to 20 pCi/L have not been in vain," says Richard T. Bell, MD, a practicing physician in the Reading area and pulmonary representative to the Society's Specialty Section.

"Basically, the results of this residential study correlate to past miner studies," he says. "Originally, it was thought that those studies overestimated the risk of low-level radon exposure. But this study supports the need to test and correct radon levels, and it especially shows the importance of identifying those people at exposures above 20 pCi/L." Dr. Bell concludes, "Clearly, we must pay attention to what was previously thought of as casual exposure."

While EPA statistics show that an estimated seven percent of all U.S. homes are believed to exceed the 4 pCi/L level, state environmental officials estimate that 30 percent of all homes in eastern Pennsylvania may exceed the level due to geological formation.

For more information on radon levels and risks, call the EPA Radon Division Office at (202) 233-9370.

AMA RELEASES HIV, SMOKING GUIDELINES

The American Medical Association earlier this year released new guidelines for the treatment of HIV/AIDS and nicotine addiction. The guidelines provide primary care physicians with new scientific data and strategies for treating HIV patients and smokers during routine office visits, according to the AMA.

The HIV guidelines help physicians diagnose the infection, determine the disease stage, monitor and treat during the early stages of infection, and assist patients in modifying behavior that can transmit HIV. The smoking-cessation guidelines give physicians a step-by-step approach to implement a "stop smoking" program for patients.

The guidelines, endorsed by the Centers for Disease Control and Prevention and the National Cancer Institute, are available by calling the AMA at (312) 464-5372.

CURRENT TRENDS IN CARDIOLOGY *Symposium*

A unique opportunity for practicing cardiologists and those in training to gain valuable information about diagnostic and management strategies for patients with cardiovascular diseases...and, enjoy the company of other colleagues.

Jointly sponsored by The Medical College of Pennsylvania and presented annually by the Episcopal Heart Institute; the symposium is recommended for:

- Cardiologists
- Internal Medicine Physicians
- General Practice Physicians
- Cardiac Care Professionals

DATE:

Saturday, May 14, 1994

PLACE:

Four Seasons Hotel
Philadelphia, PA

The Episcopal Heart Institute/ Episcopal Hospital is located at 100 East Lehigh Ave., Philadelphia, PA.

DISTINGUISHED GUEST SPEAKERS

Richard G. Bach, M.D.
Assistant Professor of Internal Medicine
Saint Louis University Medical Center

Krishnaswamy Chandrasekaran, M.D.
Associate Professor of Medicine
Director, Cardiac Ultrasound Laboratory
Hahnemann University Hospital

Leonard S. Dreifus, M.D.
Director, Division of Cardiovascular Diseases
Hahnemann University Hospital

Kenneth M. Kent, M.D.
Director, Washington Cardiology Center
Washington Hospital Center

Judith L. Swain, M.D.
Herbert C. Rorer Professor of Medical Sciences
Chief, Cardiovascular Division
Hospital of the University of Pennsylvania

Program Director:
Vidya S. Banka, M.D.

Program Co-Directors:
Peter S. Fail, M.D.,
Steven L. Zelenkofske, D.O.

REGISTER NOW!

The registration fee includes all course materials, continuing medical education credits, continental breakfast, breaks, luncheon and "Meet the Faculty" cocktail reception.

REGISTRATION FEE:
Physicians: $50.00
Physicians In Training: No registration fee required. Proof of residency status is necessary at time of registration.
Allied Health Professionals: $50.00

Current Trends in Cardiology is sponsored annually by Episcopal Hospital, an affiliate of The Medical College of Pennsylvania.

PROGRAM DIRECTOR, VIDYA S. BANKA, M.D.

For more information about this symposium, contact the office of Vidya S. Banka, M.D. at (215) 427-7247.

ACCREDITATION ACCME STATEMENT—The Medical College of Pennsylvania is accredited by the Accreditation Council for Continuing Medical Education to sponsor continuing medical education for physicians.

AMA/PRA DESIGNATION STATEMENT—The Medical College of Pennsylvania designates this continuing medical education activity for 6.0 credit hours in Category 1 of the Physician's Recognition Award of the American Medical Association.

DISCLOSURE STATEMENT—In accordance with the Accreditation Council For Continuing Medical Education (ACCME) and the Association of the American Medical Colleges (AAMC) Standards and the policy of the Medical College of Pennsylvania, presenters are asked to indicate if they have any relationship which in the content of their presentation could be perceived as a real or apparent conflict of interest, (e.g. ownership of stock, honoraria, or consulting fees). Any such relationships will be disclosed to the audience and consideration will be given to possible influences of their presentation.

Answers to Your Questions About Employee Benefits

John G. Ferreira, Esq.

These answers may take some of the mystery out of employee benefit plan regulation. For a more comprehensive treatment, contact the State Society's Department of Physician Services and ask for "Employment Law: A Guide for Pennsylvania Physicians."

From "ERISA" to "COBRA," from "Form 5500" to "SPDS," from "401(k)" to "415 limits," the universe of employee benefit plan regulation is complicated and highly technical. For a physician-employer, it can be intimidating.

This complexity can discourage physicians from offering benefits to employees—in some cases causing the physicians to lose valuable tax benefits and other advantages.

What are employee benefits?

Generally speaking, they are any form of compensation provided by an employer for services rendered, other than direct wages (i.e., other than salary or other similar payments, like bonuses, commissions, etc.). There are two basic types: pension and welfare benefits, and fringe benefits.

Pension and welfare benefits provide economic protection for employees and their families for major life events, planned and unplanned, such as retirement, termination of employment, pregnancy, illness, disability, death, and education expenses.

"Pension plans" include the usual defined pension plans, money-purchase pensions, and profit-sharing/401(k) plans; "welfare plans" include medical plans, life insurance programs, short- or long-term disability plans, severance plans, tuition reimbursement or educational assistance plans, and dependent care assistance plans.

Fringe benefits permit employees to stretch their paychecks or make their lives more pleasant, healthy, or less stressful.

Who regulates these plans?

For the most part, regulation is federal, through the Employee Retirement Income Security Act of 1974 (ERISA) and the Internal Revenue Code.

Mr. Ferreira is a partner in the firm of Reed Smith Shaw & McClay, Pittsburgh.

Am I required to offer benefits to my employees?

Generally speaking, no, an employer does not have to provide benefits. Of course, health system reform could change this.

If I provide benefits to any of my employees—including myself—must I provide those same benefits to all my employees?

Just as there is no current requirement that you provide benefits to any employees, there is no requirement that you provide the same benefits to all your employees. However, a number of rules under the Internal Revenue Code are designed to discourage "discrimination" in providing tax-favored benefits. The IRS defines "discrimination" as that favoring owner-employees, management employees, or highly compensated employees.

These nondiscrimination rules apply to benefits like tax-qualified pension or profit-sharing plans, self-insured medical plans, group-term life insurance plans, tuition reimbursement, and others.

Under the nondiscrimination rules, if you cover one or more of the "favored" employees, you must generally cover a minimum percentage of the "rank-and-file" employees, giving them comparable benefits. If you don't do this, both the practice and the favored employees may suffer adverse tax consequences—loss of deductions, and/or current taxation of benefits.

The nondiscrimination rules are complicated and differ for each type of benefit. Some allow you to disregard part-time or seasonal employees; others, like the pension rules, require you to count them in determining percentages if, for example, they work at least 1,000 hours per year. Some require you to count "leased" employees—persons from another company who perform full-time work for at least one year in your office for which you pay their company a "fee." The rules may also require you to count employees of affiliated businesses. In

each case, seek professional advice to be sure you're not violating the rules.

What other rules and requirements must I satisfy if I establish a benefit plan?

Other requirements may include:

- a written "plan document" and a plain-English "summary plan description" explaining employees' benefits and legal rights;
- an annual report (Form 5500) filed with the IRS, disclosing various types of financial and other information about your plan;
- if the plan is "funded"—has assets separate from the general assets of the practice, including employee contributions which are not paid over to an insurer—there are a variety of trust, "fiduciary," and "prohibited transaction" requirements concerning the safeguarding and management of the assets;
- if the plan is a tax-favored pension or profit-sharing plan, there are a host of "minimum standards"—minimum participation rules, vesting rules, funding and deductibility rules, rules concerning when and how benefits are distributed, rules to protect spouses, and limits on benefits; and
- if the plan is a health plan, minimum standards rules exist concerning coverage of dependents in case of divorce, coverage of children placed for adoption, etc.; if there are more than 20 employees, the so-called "COBRA" rules require employers to offer continued coverage, at employee expense, when employees or other beneficiaries lose coverage in certain events.

Can I avoid this complexity and risk by just offering benefits on an "ad hoc" basis—my decision as needed?

Maybe. But if you do this more than once, a court might discern a "pattern" of providing a certain kind of benefit. You could then be held to have established a "plan"—such as a severance pay plan—even if you never wrote it down. The next employee in that situation could sue you under ERISA, claiming entitlement to that benefit under your "plan." Federal auditors may find this unwritten plan in noncompliance, which can lead to substantial penalties or excise taxes. If you plan to provide any employee benefits, it's highly advisable to do so in a way that complies with law.

Watch for Seminars in May

John G. Ferreira and Mark Fontana, both of Reed Smith Shaw & McClay, will present a series of seminars on employment law and employee benefit issues in May. Sponsored by the State Society, the seminars will be held May 17 in Pittsburgh, May 19 in Harrisburg, and May 24 in Philadelphia. Contact the Society's Department of Meeting Services at:

(800) 228-7823

for more information or to register.

YOCON®
YOHIMBINE HCl

Description: Yohimbine is a 3a-15a-20B-17a-hydroxy Yohimbine-16a-carboxylic acid methyl ester. The alkaloid is found in Rubaceae and related trees. Also in Rauwolfia Serpentina (L) Benth. Yohimbine is an indolalkylamine alkaloid with chemical similarity to reserpine. It is a crystalline powder, odorless. Each compressed tablet contains (1/12 gr.) 5.4 mg of Yohimbine Hydrochloride.

Action: Yohimbine blocks presynaptic alpha-2 adrenergic receptors. Its action on peripheral blood vessels resembles that of reserpine, though it is weaker and of short duration. Yohimbine's peripheral autonomic nervous system effect is to increase parasympathetic (cholinergic) and decrease sympathetic (adrenergic) activity. It is to be noted that in male sexual performance, erection is linked to cholinergic activity and to alpha-2 adrenergic blockade which may theoretically result in increased penile inflow, decreased penile outflow or both.

Yohimbine exerts a stimulating action on the mood and may increase anxiety. Such actions have not been adequately studied or related to dosage although they appear to require high doses of the drug. Yohimbine has a mild anti-diuretic action, probably via stimulation of hypothalmic centers and release of posterior pituitary hormone.

Reportedly, Yohimbine exerts no significant influence on cardiac stimulation and other effects mediated by B-adrenergic receptors, its effect on blood pressure, if any, would be to lower it; however no adequate studies are at hand to quantitate this effect in terms of Yohimbine dosage.

Indications: Yocon® is indicated as a sympathicolytic and mydriatric. It may have activity as an aphrodisiac.

Contraindications: Renal diseases, and patient's sensitive to the drug. In view of the limited and inadequate information at hand, no precise tabulation can be offered of additional contraindications.

Warning: Generally, this drug is not proposed for use in females and certainly must not be used during pregnancy. Neither is this drug proposed for use in pediatric, geriatric or cardio-renal patients with gastric or duodenal ulcer history. Nor should it be used in conjunction with mood-modifying drugs such as antidepressants, or in psychiatric patients in general.

Adverse Reactions: Yohimbine readily penetrates the (CNS) and produces a complex pattern of responses in lower doses than required to produce peripheral a-adrenergic blockade. These include, anti-diuresis, a general picture of central excitation including elevation of blood pressure and heart rate, increased motor activity, irritability and tremor. Sweating, nausea and vomiting are common after parenteral administration of the drug.[1,2] Also dizziness, headache, skin flushing reported when used orally.[1,3]

Dosage and Administration: Experimental dosage reported in treatment of erectile impotence.[1,3,4] 1 tablet (5.4 mg) 3 times a day, to adult males taken orally. Occasional side effects reported with this dosage are nausea, dizziness or nervousness. In the event of side effects dosage to be reduced to ½ tablet 3 times a day, followed by gradual increases to 1 tablet 3 times a day. Reported therapy not more than 10 weeks.[3]

How Supplied: Oral tablets of Yocon® 1/12 gr. 5.4 mg in bottles of 100's NDC 53159-001-01 and 1000's NDC 53159-001-10.

Emergency Physicians Tackle Violence

Maureen Hoepfer

Richard M. McDowell, MD, is chairman of the Department of Emergency Medicine at Crozer-Chester Medical Center, Upland, and president of the Pennsylvania Chapter of the American College of Emergency Physicians. When he became president last April, Dr. McDowell designated addressing societal violence as a chapter priority. Since then he has been instrumental in the specialty society's efforts to use a public health approach to tackle this problem.

Emergency physicians are firsthand witnesses to the devastating effects of violence in America, and they will tell you that the problem is getting worse, says Richard McDowell, MD.

"We see the victims of violence every day in our emergency departments. We patch them up, send them out, and more keep coming in," he explains. "Our society is becoming more and more violent, with increasing homicides and other brutal crimes. The cause is complicated, and any solution will be complicated as well. However, there is increasing evidence that violence in America is not inevitable and that solutions can be found."

The costs of violence

Dr. McDowell says the data on societal violence show it is a public health problem that must be addressed. A recently published compendium on violence from the American Medical Association provides these frightening statistics:

- More than 16,000 acts of violence are committed or attempted in the United States everyday.
- Homicide is the third leading cause of death among 15- to 24-year-olds. The homicide rate for children and adolescents has more than doubled in the last 30 years.
- More than 1.5 million people in the U.S. are victims of assault each year, and more than 650,000 women are victims of rape.
- 1.8 million women are beaten by their male partners each year.
- Two to four million children were abused or neglected in 1991, and more than one million elderly were mistreated last year.

"The medical costs of violence are enormous in this country. It is estimated that the cost of gunshot wounds alone last year was $20 billion. That's three percent of the total U.S. health care expenditure," Dr. McDowell emphasizes. "In Pennsylvania, the total medical costs of violence in 1991 was $435 million. These statistics don't include the costs of social services, shelters, lost work, and lost productivity."

Public health approach

In a sociologic sense, Dr. McDowell says violence in the U.S. has become an epidemic. "The Centers for Disease Control and Prevention have clearly made the argument that we should treat this problem as we have treated other epidemics in this country: using a public health approach," he explains. The public health approach is to define the problem, collect data, analyze it, identify interventions, and measure their impact.

"Rhetoric will not solve this multi-faceted problem," he says. "What is required is a scientific methodology and an interdisciplinary approach—including physicians, legislators, social services, law enforcement, the judicial system, and others."

When Dr. McDowell assumed the presidency of the Pennsylvania Chapter of the American College of Emergency Physicians (ACEP) last year, one of his first official actions was to appoint a special Task Force on Interpersonal Violence. "I felt strongly that emergency physicians needed to be involved in this issue because we're on the front lines and see the fallout of this epidemic. The mission of this task

Ms. Hoepfer is a marketing associate for the Society's Educational and Scientific Trust. This article is one in a series, begun in January 1993 and ongoing through 1994, sponsored by the Trust's endeavor to address public health needs, Keystones of Public Health.

force is to use a public health approach to study interpersonal violence and develop strategies emergency physicians can use to help reduce the problem."

He admits that violence seems to be such an overwhelming problem that solutions are elusive. However, the issue seems more manageable when focusing on only one or two specific aspects of violence. The Pennsylvania ACEP task force is taking this approach, he says.

Specific strategies

One major task force focus is education. The goal is to inform health care providers on how to better identify and refer victims of violence. "As physicians, we treat victims of violence all the time in emergency departments, as well as in our offices. We need to educate physicians and other health care providers about how to identify victims, how to deal with them, and what resources are available for these patients," Dr. McDowell explains. "I know physicians are not social workers, but we have a responsibility to refer victims to the proper resources for help. I think it's part of the job...it goes with the territory."

To help educate providers, the Pennsylvania ACEP, through its special task force, has published a *Primer on Interpersonal Violence* which it is offering free to physicians and other health care professionals. The primer includes information on how to recognize victims, offer support, and help patients find and use existing resources. "Dealing with victims of violence is difficult for emergency physicians because we like to fix problems and see instant results," Dr. McDowell says. "However, taking the time to intervene and show people where to go next for help is incredibly important in dealing with this problem."

Pennsylvania ACEP will also focus on initiating and influencing legislation related to interpersonal violence, and recently hired a lobbyist to work on this issue. Dr. McDowell says Pennsylvania ACEP will, for example, lobby for passage of legislation which would outlaw the possession of handguns by minors. "Pennsylvania ACEP thinks the legislators need to look at this oversight. We don't believe that children should be allowed to possess handguns. Legislation aimed at selected groups with selected firearms can help reduce the lethality of violence."

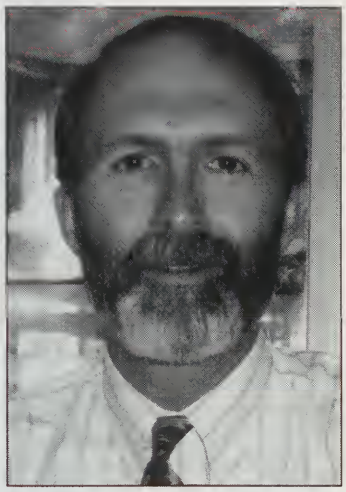
Also, to help educate legislators about the problems caused by increasing societal violence, several Pennsylvania ACEP members participated in a special legislative seminar sponsored by the House Judiciary Committee earlier this year. Issues discussed included the costs of violence, emergency treatment and care of victims, and violence as an epidemic.

"By talking with and educating legislative leaders, we hope to not only influence legislation related to this issue, but also funding. We need to put money into this issue to effectively deal with it," Dr. McDowell explains.

Finally, the Pennsylvania ACEP task force will work on building coalitions against interpersonal violence in Pennsylvania and getting involved in committees working on the issue. Recently, the Pennsylvania Department of Health appointed Dr. McDowell to represent Pennsylvania ACEP on a special Interagency Committee on Violence Prevention. Secretary of Health Allan S. Noonan, MD, has designated addressing violence as one of the department's priorities and has allocated $400,000 for pilot community-based anti-violence programs.

"This task force is a start, but we're hoping to build a strong coalition in the state against societal violence." Dr. McDowell says, "Strong coalitions can have an impact. Look at the success Mothers Against Drunk Driving had on that issue in this country."

"I realize that this problem won't be solved in the year that I'm president of Pennsylvania ACEP. But at least we've begun." He adds, "Physicians, legislators, community leaders, and the public need to say enough is enough. We need to say that the level of violence in this country has escalated and is unacceptable. In my opinion, emergency physicians and physicians in general can be very effective in changing public attitudes about violence."



Dr. McDowell

Resources on Interpersonal Violence

Dr. McDowell suggests the following reading material to physicians interested in learning more about interpersonal violence:

Society Saves Physicians $3 Million in Refunds

The State Society, working closely with the AMA, has saved Pennsylvania physicians nearly $3 million in refunds demanded as a result of a payment error by Pennsylvania Blue Shield.

The Society learned of the problem late last summer when Blue Shield sent a refund demand letter to approximately 1,600 Pennsylvania physicians and clinical laboratories. The letter demanded refunds for what Blue Shield characterized as "overpayments" that it had made for two organ panels.

Similar letters were sent to physicians and labs in Blue Shield services areas surrounding the commonwealth with refund demands exceeding $13 million. Pennsylvania's share was over $6 million.

Shortly after the Society learned of the problem, it sent a letter to HCFA expressing its concerns. After months of meetings and correspondence, HCFA has offered in resolution:

- a one-year statute of limitations, as requested by the Society. Refunds now are required only for overpayments made during the one year prior to the administration's discovery of the error on July 24, 1993. Because Blue Shield corrected the error earlier, the applicable refund period actually has been shortened to about 10 months.
- not to seek refunds from physicians and labs overpaid less that $1,600 during the shortened refund period.
- to waive interest on unpaid balances for one year from the date new refund letters will be issued. After that time, interest will be assessed on unpaid balances at a rate yet to be determined.
- to grant requests for installment payments for up to 15 months without demonstrating "hardship," with interest assessed as described above. If hardship can be demonstrated, the payback period may be extended beyond 15 months.
- to require Blue Shield to pay the administrative costs of collecting the refunds.
- to allow another carrier (i.e., not Blue Shield) to handle appeals.

Even with these concessions, it is important to note that *physicians may still contest their liability by filing an appeal.*

The Society's Department of Legal Affairs has prepared information outlining the options available to physicians, and explaining how to file and pursue appeals. To obtain this information—free and available only to Society members—call the Department of Medical Economics at (800) 228-7823, or fax a written request to (717) 558-7841.

RESOURCES OFFERED ON HOLD HARMLESS CLAUSES

Managed care contracts sometimes include a provision that requires the physician to assume the liability of the third-party payer that results from the third party's negligence or otherwise. These provisions are often referred to as "hold harmless" clauses.

While the Society cannot provide legal advice on specific contracts, our Department of Medical Economics can provide background information on these clauses, and our Department of Legal Affairs can discuss legal issues in general terms with physicians. To contact either department, call the Society at (800) 228-7823 or (717) 558-7750. Physicians should consult with their own attorneys for specific legal analysis.

Note: Managed care contracts also routinely include a clause that prohibits physicians from seeking payment (except for copayments and deductibles) directly from the managed care subscriber, even if the payer fails to pay due to insolvency or some other reason. While this is sometimes also referred to as a "hold harmless" clause, it does not raise the same concerns as the clause involving liability.

National Medicare Fraud Alert Issued

Pennsylvania Blue Shield-Medicare has issued the following National Medicare Fraud Alert:

A supplier of durable medical equipment (DME) and supplies is marketing incontinence care kits to other DME companies and directly to nursing homes. The marketing plan states that nursing home patients who are covered under Medicare Part B and who have a diagnosis of urinary incontinence (ICD-9 Code: 788.3) qualify for the kits. In some instances the seller reportedly states that Medicare is paying for the kits under a special pilot program. Reportedly, beneficiaries are frequently told to ignore the copayments if they do not have insurance.

The kits are being presented to nursing homes with diapers included. However, in some instances, the diapers are reportedly given free, in addition to the kits, to the nursing home in exchange for the names and HICNs of beneficiaries. In either case, marketing representatives obtain beneficiary HICNs and order bulk quantities of supplies billed in the beneficiary's name. *However, in no case are diapers covered under Medicare.*

The P·I·E Mutual has now entered the state of Pennsylvania. And whenever we come into a state good sense comes along, nonsense exits. Stability returns to the medical liability insurance market. In nine states 16,000 of our member-insured doctors have been enjoying the new cost climate. Protected by one of the largest medical professional liability monoline insurance companies in America. And defended by a firm of medically savvy litigators who close almost 80% of cases without payment. And, year in and out, win 90% of cases that go to trial.
For information, call 1-800-228-2335.

Governor Proposes 1994-95 Budget Increases

In his annual budget address to the General Assembly in February, Governor Robert P. Casey outlined increases in a number of human service and welfare areas for 1994-95.

"This budget substantially increases our commitment to women, children, older citizens, and families," he told the assembly. "At the same time, it recognizes that unless we change our policy of providing additional state benefits to welfare recipients, these programs face complete extinction. I do not want to see this happen."

He further explained that his proposals limit state-funded benefits to those able to work, with the overall goal of crafting a program which is "sensible, fair, and compassionate."

The governor has proposed:

- $2.55 billion in state Medical Assistance funds to provide outpatient, hospital, medical transportation, and nursing home services for the poor;
- $376.4 million ($2.7 million increase) in state and federal funds for community mental health services, $385.6 million ($5.6 million increase) for community mental retardation services, $97 million ($21.2 million increase) for early intervention programs provided by the Departments of Public Welfare and Education, and $103.1 million ($5.1 million increase) for intermediate care facilities for the mentally retarded;
- $196 million ($5 million increase) Lottery Fund transfer to the Pharmaceutical Assistance for the Elderly Contract (PACE) Program to offset the cost of prescription drugs for 316,600 older Pennsylvanians;
- $160 million ($11.7 million increase) in state funds for aging programs and abuse intervention services;
- $84.1 million for local drug and alcohol abuse programs;
- $31.25 million ($1.5 million increase) to fund AIDS programs;
- $11.35 million ($818,000 increase) for domestic violence and rape crisis services;
- $9.7 million to comply with the requirements of the Americans with Disabilities Act;
- $5.57 million for the governor's Primary Health Care Program, which funds local environmental health programs; a program to increase the number of primary care providers in underserved rural and urban areas; a generalist physician medical school loan forgiveness program; and the rural telecommunications project to link rural health care providers to urban medical centers through automated technology;
- $3 million for women's service programs and women's medical services that provide alternatives to abortion; and
- $842,000 ($17,000 increase) for breast cancer screening services for low-income women.

Although hearings were being conducted, the potential for political change in the Senate at press time left the timetable for budget passage uncertain.

SOCIETY COMMENTS ON SCOPE OF PRACTICE PAPER

In a recent letter to Pennsylvania Secretary of Health Allan S. Noonan, MD, the Society voiced strong objections to two recommendations published in a draft Department of Health position paper on the scope of practice of non-physician health care practitioners.

"Eliminating the Practice Barriers for Certified Registered Nurse Practitioners, Certified Nurse-Midwives, and Physician Assistants in Primary Health Care," drafted by a department work group over the last several months, is intended to establish the state's policy for addressing health care access problems in underserved areas of the commonwealth. The statement will be used in support of a grant application to the Robert Wood Johnson Foundation for monies to pursue the state's primary care initiatives and would also serve as the administration's position on legislation on the scope of practice of advanced practice nurses.

Briefly, the draft position states that there is an access problem in Pennsylvania and that many areas of the state are underserved with respect to primary care services. It cites, among other reasons, lack of sufficient numbers of physicians trained in and practicing primary care, length of time to train adequate numbers of physicians as primary care physicians, and "barriers" preventing the use of advanced practice nurses and physician assistants in the delivery of primary care.

The paper recommends:

- transferring regulatory authority for certified registered nurse practitioners (CRNPs) to the Board of Nursing;
- permitting the Board of Nursing to regulate the signing of prescriptions by CRNPs under a written collaborative agreement with a physician;
- ensuring that all health financing systems permit the use of CRNPs and certified nurse midwives (CNMs) as enrolled providers;
- directing the State Medical Board to clarify the authority of CNMs to sign prescriptions in accordance with a written collaborative agreement with a licensed physician; and
- permitting physician assistants to be employed with limited authority until they have passed the proficiency examination.

The Society in its letter strongly objected to the recommendations relating to the transfer of regulatory authority to the Board of Nursing, and the granting of prescription authority to CRNPs and CNMs, citing:

1) the lack of adequate training of CRNPs and CNMs related to prescribing, and legal and liability restrictions to such proposals; and

2) the need for the State Medical Board to regulate prescriptive authority for nurses as it does for physician assistants.

The Society also indicated that continued support for the primary care initiatives of the department might be re-evaluated, should the draft position paper be published unchanged.

At press time, the Society was awaiting the department's response to these and other concerns.

Donald N. McCoy, the Society's director of regulatory affairs and specialty legislation, contributed to this page.

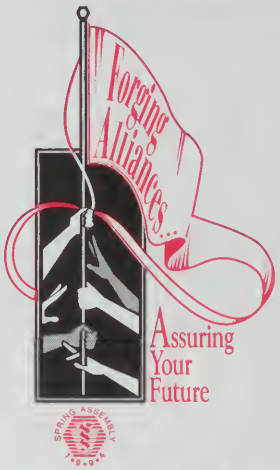
White House Official to Speak at Spring Assembly This Month



Kenneth E. Thorpe, a nationally known economist working with the White House to develop the president's health system reform initiative, is the newest addition to the program for the Society's 1994 Spring Assembly, "Forging Alliances... Assuring Your Future," to be held April 19-20 at the Harrisburg Hilton and Towers.

Thorpe, deputy assistant secretary for health policy in the U.S. Department of Health and Human Services, will discuss the future of health system reform as seen by the White House. His speech will follow Tuesday's keynote address by Richard F. Corlin, MD, vice speaker of the AMA House of Delegates and immediate past president of the California Medical Association. Dr. Corlin will attempt to answer the question, What is the future of the medical profession?

Also, Jennifer James, PhD, a cultural anthropologist, will discuss dealing with the future, and Thomas M. Reardon, Esq., an attorney and one of last year's most popular speakers, will talk about alliances with health care professionals.

Wednesday's program will include six workshops (attendees may pick three) on personal computers, physician-hospital organizations, financial planning, legislative and public speaking strategies, contracting with managed care organizations, and medically futile care.

Assembly activities

In addition to two seminars, "Practicing Politics" and "Improving Cost-Effective Clinical Decision Making," scheduled the day before the conference, the Society is planning several activities in conjunction with the speeches and workshops.

A dinner Tuesday night will feature the Capitol Steps, a nationally known group of political satirists: "The Capitol Steps have been poking fun for 11 years at the high and the mighty, in Washington and elsewhere...Billed as the only group in America that attempts to be funnier than Congress, the Steps came into existence at the beginning of the Reagan administration, when its members, all Congressional aides on Capitol Hill, decided that if entertainers could become politicians, then politicians could become entertainers."

The Steps say they play no favorites in their parodies of Washington's leaders. According to Elaina Newport, co-founder and star of the show, "Typically, the Republicans goof up and the Democrats party; then the Democrats goof up and the Republicans party. That's what we call the two-party system."

The Pennsylvania Medical Political Action Committee (PAMPAC) is sponsoring the dinner.

Also scheduled, a "brown-bag" luncheon on Tuesday in the exhibit area will allow physicians and Hospital Medical Staff Section (HMSS) members to meet and discuss current and common concerns, and peruse the exhibits.

A Wednesday morning breakfast will feature an address by State Society President Martin A. Murcek, MD, and the presentation of the Society's Physician Volunteer Award.

This year's Spring Assembly has been approved for 7.5 hours of Category I continuing medical education credit. For registration information, call the Society's Department of Meeting Services at (800) 228-7823.

STATE SOCIETY PUBLISHES REFERENCE FOR COUNTIES

The State Society in late March distributed to county medical society executives its new "Reference System for County Medical Societies." The kit of information is designed to assist counties with current activities and creating new activities.

Topics addressed are: administration, communications, computers, continuing education, governmental relations, publications, resources, speakers' bureau, and special events. More specifically, the kit offers information on such issues as:

- how to handle difficult phone calls,
- how to build relationships with the news media,
- how to start a mini-internship program,
- how to plan a publication, and
- who to contact for information on various health-related issues.

Also included is a public service announcement on living wills.

The Society will continue to update the Reference System periodically, and new sections will be added as needed. Direct any questions about the kit to the Society's Department of Public Affairs at (800) 228-7823 or (717) 558-7750.

THIRD ANNUAL RURAL HEALTH CONFERENCE SLATED FOR JUNE

"FORMING Community Health Systems—ReFORMING Rural Health Delivery" is the theme of the

Third Annual Pennsylvania Rural Health Conference, to be held June 8-10, 1994, at the Nittany Lion Inn, State College.

Denise Denton, president of the National Rural Health Association, will open the conference with a keynote address. A full-day workshop on community health systems development will follow. The remainder of the conference will consist of concurrent and plenary sessions on such issues as: recruitment of health professionals, teen pregnancy, rural hospice care, networking, health legislation, and the role of mid-level practitioners.

Physicians, hospital administrators, other health care professionals, and health care consumers are invited to attend the conference. For information, write to the Pennsylvania Office of Rural Health, Penn State, 7 Armsby Building, University Park, PA 16802; or fax your request to (814) 865-3746.

DOH RELEASES ANNUAL HEALTH RISK SURVEY

The Pennsylvania Department of Health (DOH) in February released the results of its survey, "Health Risks of Pennsylvania Adults 1992."

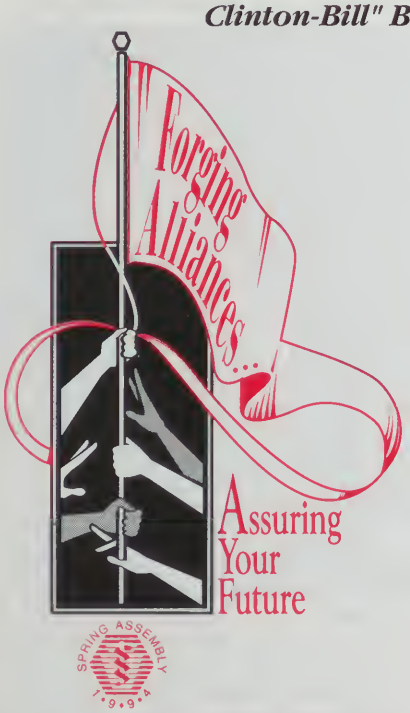
AMA Trustee Paula E. Formica, MD (center), spoke about the AMA's response to the Clinton health system reform proposal at the Berks County Medical Society (BCMS) Installation Dinner, held January 6, 1994, in Reading. Pictured with Dr. Formica are R. William Alexander, MD (left), State Society past president and delegate to the AMA, and Richard T. Bell, MD (right), BCMS past president and alternate delegate to the AMA.

Completed annually by the department, the survey is used to estimate the percentage of Pennsylvanians at risk due to unhealthy behaviors.

Among the results:

- Smoking among adult Pennsylvanians is down three percent from 1989, the first year the department conducted the study.
- Forty-five percent of respondents were at increased risk of serious injury and death in the event of a car crash because they reported that they do not always use a seat belt when driving or riding in a car.
- Less than half of women aged 50 and older reported having had a mammogram and breast exam done

Got the "You-Know-It's-Cold-When-You're Curlin'-by-the-Fire-with-a-Copy-of-the-Clinton-Bill" Blues? . . . Uh-oh. It's been winter tooooo long!



TIME FOR SPRING ASSEMBLY!!!

April 19-20, 1994
Harrisburg Hilton and Towers

- Nearly a dozen nationally respected speakers.
- 7.5 hours of Category 1 CME credit.
- 30 exhibitors of quality goods and services.
- Lively political satire from the Capitol Steps.

Your colleagues will be looking for you.
For information, call (800) 228-7823.

The Pennsylvania Medical Society 1994 Spring Assembly immediately following the 20th HMSS Assembly:

"Forming PHOs: Hospital and Physician Perspectives"

Tuesday, April 19
8:30 - 11:30 a.m.

by a health professional within the past year.

• Being overweight is a problem that plagues 28 percent of Pennsylvanians.

• Thirty-three percent of respondents reported having high blood pressure, 27 percent reported having high cholesterol, 20 percent reported having arthritis, and six percent reported having diabetes.

Questions also focused on other health risks (physical inactivity, HIV/AIDS, weapon carrying), health insurance coverage, and routine physician visits.

The survey is based on a random telephone study of 2,405 Pennsylvania adults and was conducted in cooperation with the Centers for Disease Control and Prevention, Atlanta. Data are compared to similar survey responses nationwide.

To request a copy of survey results, call DOH's Division of Health Promotion at (717) 787-5900.

AMA, USP EXPANDING PATIENT EDUCATION COLLABORATION

The American Medical Association (AMA) and the U.S. Pharmacopoeia (USP) have agreed to work together to develop a print- and computer-based patient education system that will enable physicians to provide patients with information about their drug therapy needs. This effort builds on the AMA's Patient Medication Instruction Sheet (PMI) program that was initiated with USP in 1981.

One of the most important goals of the expanded program, according to AMA and USP officials, is to encourage consistency in the content and delivery of information to patients from physicians and pharmacists, the two primary providers of USP patient education information. Reinforcement of information of similar content, format, and style can be a major contribution to increasing patient drug therapy compliance.

The current offering of preprinted AMA PMI for the approximately 100 most commonly used drugs or drug classes, which are based on the USP DI database, will continue to be available. As the first step in the program, the AMA and USP will develop a loose-leaf book of PMIs based on the complete standard USP DI leaflet database, which includes approximately 650 individual titles. Prescribers will be able to photocopy the information for patients as the drug is prescribed.

The second phase of the program will include development of companion loose-leaf books of Easy-to-Read and Spanish language leaflets. USP will also develop for the AMA a leaflet diskette for physicians' offices enabling them to print, rather than photocopy, information for their patients. When the joint program is fully implemented, the entire leaflet database will be available electronically for physicians to create patient-specific education leaflets.

For additional information about the PMI and expanded programs, call the AMA at (800) AMA-3211.

Society Goals Strengthened by Cooperative Efforts

The Pennsylvania Medical Society welcomes the opportunity to participate in organizations and coalitions whose goals are in line with those of the Society. Such participation often strengthens Society efforts through the cooperative support of others. While some groups with which we are aligned receive considerable attention in Society publications, others may go unnoticed. From a long list of Society alliances, the following are some less publicized:

• *Advance Directives Public Relations Task Force*—Develops public education materials for community education workshops on advance directives and durable power of attorney.

• *American Tort Reform Association*—Works to increase the awareness and need for reforming the general tort system, and serves as a clearinghouse for information on national tort reform activities; also focuses on medical liability reform.

• *Attorney General's Drug Abuse Task Force*—Develops strategies to fight drug abuse in Pennsylvania.

• *Dr. Martin Luther King Jr. Youth Assembly*—Promotes education of youth in principles of nonviolence.

• *Medical Group Management Association*—Works to enhance health care delivery and administration through a broad range of group practice leadership and professional development, education, credentialing, information, communication, advocacy, networking, and research activities.

• *PennCaire*—Addresses water and air quality issues.

• *Pennsylvania Association for Organ and Tissue Donation*—Promotes and facilitates the donation of organs and tissues through legislation, public awareness, and interdisciplinary approaches.

• *Pennsylvania Emergency Health Services Council*—Develops statewide standards for emergency medical services. The Society is a founding member.

• *Pennsylvania Society for Biomedical Research*—Promotes the safe use of animals in biomedical research.

• *Pennsylvania Trauma Systems Foundation*—Establishes standards for trauma centers in Pennsylvania and accredits those that meet those standards.

• *Stop AIDS Via Education (SAVE)*—Works to foster good AIDS education in the schools of Pennsylvania.

HOUSE OF DELEGATES NEWS

CALL TO 1994 ANNUAL MEETING

The House of Delegates of the Pennsylvania Medical Society will convene its annual meeting at the Hershey Lodge and Convention Center, Hershey, Pennsylvania, on Friday, October 21, 1994. The second session will convene Saturday, October 22, 1994, and the third session Sunday, October 23, 1994. Details regarding the starting times of all three sessions will appear in the "Official Call" in the August 1994 issue of PENNSYLVANIA MEDICINE.

All proposed amendments to the bylaws must be submitted to the office of the secretary of this Society on or before June 21, 1994. Such amendments may be proposed upon the written petition of 15 active or associate members of the Society, or by the Committee on Bylaws.

Resolutions to be considered by the House may be submitted in writing to the secretary by a delegate acting in his or her own behalf or for the component medical society or specialty society he or she represents. If received prior to September 21, 1994, resolutions will be published in the *Official Reports Book.*

The Society's Educational and Scientific Trust has announced the establishment of the **Raymond C. Grandon, MD,** and Doris N. Grandon Fund and the **Martin A. Murcek, MD,** Fund. Both funds—established with gifts from "three presidents in medicine's family"—will assist in underwriting expenses for physician leadership development offered by The Institute for Physician Leadership of the Trust.

Dr. Malcolm

John A. Malcolm Jr., MD, Sunbury, on behalf of the State Society, attended the inaugural meeting in January of the National Quality Summit. The mission of the summit is "to foster a system of enhanced accountability for the quality of health care provided under health system reform through coordination of public and private sector efforts to evaluate and enhance quality." The meeting was hosted by the AMA.

Two Hahnemann University School of Medicine students were among 25 medical students nationwide to receive 1994 AMA/Glaxo Achievement Awards for demonstrating strong, non-clinical skills. **Rebecca L. Kunkel,** past State Society medical student trustee, was recognized for her active participation in organized medicine, and **Edward Kantor** was recognized for his commitment to promoting community involvement as an integral part of the medical school curriculum. Each received a $900 stipend to assist with travel and accommodations to attend the AMA National Leadership Conference in February.

Ratmir R. Ciganic, MD, Wexford, has been appointed chief of radiology, Suburban General Hospital, Pittsburgh.

Asher Woldow, MD, chief of cardiology and president of the medical staff, Philadelphia Geriatric Center, has been named clinical professor of medicine, Temple University School of Medicine, Philadelphia.

Saul Jeck, DO, has been named chief of staff, Graduate Health System, City Avenue Hospital, Philadelphia.

David S.C. Pao, MD, has been promoted to associate surgeon, Cataract and Primary Eye Care Service, Wills Eye Hospital, Philadelphia.

The Berks County Medical Society (BCMS) installed the following officers at its installation dinner held in Reading in January: Rocco F. Chirieleison, MD, president; John C. Moser, MD, president elect; and William J. West Jr., MD, secretary. Also at the dinner, Richard T. Bell, MD, a BCMS past president, received the county society's 1994 Community Service Award in recognition of his community volunteer activities. Pictured above: Dr. Chirieleison (left) presents Dr. Bell (right) with the BCMS Community Service Award.

Dr. McHugh

James E. McHugh, DO, vice president of medical affairs, Suburban General Hospital, Norristown, has been appointed to the National Board of Osteopathic Medical Examiners (NBOME).

Chestnut Hill Hospital, Philadelphia, installed the following officers for 1994: **Ramsey Thorp, MD,** president; **Baxter Holland, MD,** vice president; and **Nancy Gettes, MD,** treasurer/secretary. Also at the hospital, **Marc W. McKenna, MD,** has been appointed director of the family practice residency program and family practice unit.

The Lupus Foundation of Philadelphia presented Sheryl N. Hirsch Research Grants to **Michael P. Madaio, MD,** associate division chief, Renal Electrolyte and Hypertension Division, and **Leslie E. Silberstein, MD,** director, Blood Bank and Transfusion Medicine Section, University of Pennsylvania Medical Center, Philadelphia.

Myles Turtz, MD, Cherry Hill, New Jersey, has been appointed executive vice president of Allegheny Health, Education and Research Foundation for Systems Development. His responsibilities include working with the CEOs of five Delaware Valley hospitals.

The *New England Journal of Medicine* published an article authored by **John Ditunno Jr., MD,** Thomas Jefferson Medical College of Thomas Jefferson University, Philadelphia, and **Christopher Formal, MD,** Magee Rehabilitation Hospital, Philadelphia. The article reviews facts and figures about spinal cord injury.

Lawrence J. Schneiderman, MD, San Diego, California, has been named the 1994 Medical College of Pennsylvania (Philadelphia) Katharine Boucot Sturgis Visiting Professor in the Department of Community and Preventative Medicine.

Chestnut Hill Hospital, Philadelphia, has appointed **Jonathan Rogers, MD,** Lower Gwynedd, chief of orthopedics.

Serving Central Pennsylvania

National Cooperative Projects Are New PRO Direction: HCQIP

Donald E. Harrop, MD

In this fourth of a series of articles on the new peer review organization Health Care Quality Improvement Program, KePRO's president overviews national cooperative projects.

You may notice that in the above title, HCQIP has replaced the HCQII of the previous three articles. The Health Care Financing Administration (HCFA) has decided that the Health Care Quality Improvement Initiative is no longer an initiative, but is now a full-fledged "program." This is just one of the many changes expected as peer review organizations (PROs) move farther into this new direction, and both the PROs and HCFA gain more experience with data analysis and information feedback.

Although HCFA has not yet determined any minimum number of local cooperative projects, PROs are expected to have a variety of projects in progress and in various stages of development at any given time, with some consideration given to the size of the PRO. National cooperative projects are handled somewhat differently, however, since they may be difficult to initiate and coordinate. HCFA determined the subject for the first two national cooperative projects, and this is expected to continue, although I'm sure PROs will have the opportunity to make suggestions.

The first national project is referred to as the Medicare Hospital Information Project (MHIP) and involves annual mortality data HCFA has publicly released each of the last several years. This year, rather than releasing the data to the media as in the past, each hospital will receive only its own data along with some statewide and national figures for comparison purposes, and the factors used to predict the mortality rates.

Each PRO will receive data applicable to its state, and is expected to analyze the data for regional and provider-specific variations. Focused medical review, explained in this column in January, will be instituted when a significant variation is identified; that is, the information learned from the analysis will be communicated with the individual provider(s).

Further study, with provider cooperation, is then conducted to determine if the variation truly represents a problem with the treatment process. If so, the information learned from the study is communicated to the provider(s) to help them to provide more effective treatment.

Our initial analysis of the 1993 Hospital Report, which utilizes 1991 data, did not identify any dramatic variations in the Pennsylvania hospital data. We are communicating our findings to hospital chief executive officers and using the data as an adjunct to other analyses. HCFA expects that these analyses will be used as a tool in other patterns and outcomes analyses. The MHIP will most likely continue to be an annual PRO project.

Most national projects will probably be conducted in the same or similar manner as the cooperative cardiovascular project (CCP), the other current national project. In this case, four PROs (not including KePRO) were selected to participate and conduct the study on a pilot basis. The intent is to assess the processes and outcomes of care for patients hospitalized for acute myocardial infarction (AMI), coronary artery bypass grafting (CABG), and percutaneous transluminal coronary angioplasty (PTCA).

These PROs will develop statistical quality assurance methodologies, generate feedback techniques, and develop cooperative techniques for improving processes and outcomes of care. We expect that all remaining PROs will participate in this study after the entire methodology has been refined.

Although the HCQIP process is quite complicated and involves numerous steps in the development of both local and national projects, we at KePRO are determined to not lose sight of our mission as a PRO. We fully intend to continue to strive to assure that Medicare beneficiaries receive quality of care, efficiently delivered. ⬡

Dr. Harrop is president of the Keystone Peer Review Organization.

ANNUAL 1993 REPORT

THE EDUCATIONAL AND SCIENTIFIC TRUST
A Legacy To Medicine

From the Executive Director

IN MAY 1994, I WILL RETIRE AFTER 22 YEARS OF SERVICE AT THE Pennsylvania Medical Society and 12 years as executive director of The Educational and Scientific Trust. During my tenure, the Trust has grown in ways I never thought possible. When I came in 1982, the Trust had a staff of two, assets of $3 million, an annual budget of $80,000, and one focus — the student loan program. Today, the Trust has a staff of 17, assets of $8 million, an annual budget of $1.5 million, and seven major areas of focus.

Our growth can largely be attributed to the continuous support of Pennsylvania physicians, the Pennsylvania Medical Society and Alliance, the county medical societies and alliances, and other friends. I believe you, in partnership with the Trust, are making a difference here in the Commonwealth.

The Trust has expanded significantly within the realms of financial possibility. Our *student loan program* provides between $300,000 and $500,000 annually to students in need. The *Physicians' Health Programs* has an active case load of 450 physicians and has helped over 1,000 individuals on their way to recovery. *The Institute for Physician Leadership* is working diligently to enhance the human relations and organizational skills of medical leaders so they can successfully direct their institutions and professional organizations. One of our newest programs is *Keystones of Public Health*, a coalition focusing on education and information dissemination relating to Pennsylvania's public health priorities. *Keystones* takes the Trust back to its 1954 roots of addressing public health needs.

The Trust has reached the point of expansion where we must now pause and assess our progress. At our 1993 board planning retreat, the Trustees directed us to make each of our programs financially stable. Raising funds to sustain our programs remains a priority, and we continue to rely on your support. As we do, we promise to remain faithful stewards of your generosity.

I'm excited about the future of the Trust. The board has selected Matthew J. Tornambe as my successor. Mr. Tornambe has served for the past 10 years as the executive director of the Central Pennsylvania Chapter of the National Multiple Sclerosis Society. His experience in non-profit management and fund-raising will enable the Trust to continue serving the physicians of Pennsylvania. As the leadership of the Trust changes, the growth of programs and interpretation of priorities will also change. But the Trust remains committed to serving the needs of medicine.

To those who have watched the Trust grow over the years and to those who are newer friends, I extend my personal gratitude for your commitment and support of the Trust.

I used to buy apples and peaches at an orchard outside of Bowmansdale, Pennsylvania. As I paid for my fruit, my farmer friend always said to me, in a most sincere way, "Thanks a whole lot." That is how I feel about my years of association with you, and I express it in a most sincere way, "Thanks a whole lot."

LeRoy C. Erickson

1993

From the Chairman

You have before you the thirty-ninth annual report of The Educational and Scientific Trust. For 39 years, the Trust has provided programs and services which benefit Pennsylvania physicians and the public.

You are an important part of our growth and progress. Your dedication and support of the Trust's programs have enabled us to expand. The effectiveness of our retiring executive director has been another crucial element of the Trust's progress. His leadership has guided the Trust through some turbulent times to a position of stability and sustained growth.

On behalf of the Board of Trustees and staff, I extend a special note of thanks to LeRoy C. Erickson and wish him the best in his future endeavors. The Trust looks forward to new opportunities with our incoming executive director, Matthew J. Tornambe. I am confident in his ability to lead the Trust into the future.

The Trust was initially established to address public health needs on behalf of Pennsylvania physicians. While we have maintained that priority, we have also expanded into several other areas. Our annual report highlights the following activities: the loan programs, projects, the Physicians' Health Programs, The Institute for Physician Leadership, Keystones of Public Health, fund-raising, and finance.

Abram M. Hostetter, MD
Chairman, Board of Trustees

Loan Programs

Student Loans

The Trust's most long-standing activity is its student loan program. The loan program has provided $9.8 million in financial assistance to more than 3,200 medical and allied health students.

The basic loan for medical students is $3,000 and $1,500 for allied health students. For the 1993-94 school year, the Trust granted $334,988 to 117 medical students and $43,300 to 33 allied health students.

Pennsylvania Medical Society members have been the mainstay of the medical student loan program over the years. Ten dollars from each member's dues is allocated to the Trust's Medical Student (Educational) Fund. Throughout the years, members have provided $3.2 million through these dues allocations.

Members were given the option on their 1993 dues statement to make an additional $10 contribution to the medical student loan fund. Almost 4,000 members responded with a gift of $10 or more.

The dedication of Society members and other friends of medicine demonstrates the Trust's continuing legacy to the future of Pennsylvania medicine and physicians-in-training. The Trust remains committed to providing financial assistance to students in need.

Residency Relocation Loans

In 1991, the Trust established the Residency Relocation Loan, which provides additional financial assistance to our loan borrowers once they have completed medical school. Every borrower preparing to enter a residency program is eligible to receive up to $1,000 to help with relocation and living expenses. The Trust distributed $46,000 to eligible borrowers in 1993 and has granted $116,900 since the program began.

Loans for Children of Deceased or Disabled Physicians

The Trust administers a special loan program to help unmarried, dependent children of deceased or disabled Pennsylvania Medical Society members complete their education if the family's financial resources are not adequate to do so. This loan is available to any eligible student enrolled in a high school, college, or graduate school located in

the United States. The loan is interest-free while the student is in school. In 1993, the Trust distributed $12,000 to four eligible students. Over the years, the Trust has granted a total of $229,648 to 92 students.

Pennsylvania Medical Society Student Memberships

Since 1988, the Trust has offered to pay Pennsylvania Medical Society student memberships for interested Trust loan recipients. The Trust hopes to acquaint borrowers with the benefits of organized medicine while they are still in school. In 1993, the Trust paid memberships for 39 students.

Financial Aid Officers' Workshop

This year, the Trust sponsored its twentieth annual financial aid officers' workshop. Representatives from Pennsylvania medical schools, the Pennsylvania Higher Education Assistance Agency (PHEAA), and the U.S. Department of Health and Human Services attended to discuss the present issues facing financial aid programs. The workshop allowed the schools' officers to network with other financial aid organizations at the state and federal level.

Each spring, the American Medical Association Education and Research Foundation (AMA-ERF) presents each Pennsylvania medical school with cash awards to benefit the school's programs. The funds are primarily generated by county medical society alliances. Sue Pan, 1993 president of the Pennsylvania Medical Society Alliance, and Roger Mecum, executive vice president of the Pennsylvania Medical Society, awarded checks totaling over $65,000.

Special Thanks

The Trust would like to thank the Pfahler Foundation, administered by the Philadelphia County Medical Society, for its contribution of an outstanding student loan portfolio valued at $137,550. We have collected $135,463 in principal and interest and are pleased to report that only two loans remain outstanding. Over the years, this money has been added to the Medical Student (Educational) Fund to support new student loans.

Projects

The Trust uses a marketing philosophy as the basis for conducting many of its projects and programs. We use research to determine an audience's needs and then develop recommendations or materials to meet those needs. In 1993, the Trust supported the Pennsylvania Medical Society's endeavors and addressed relevant health care issues in this manner.

Elder Abuse and Protective Services. Under contract with the Pennsylvania Department of Aging, the Trust produced a third professional training videotape on recognizing and reporting cases of suspected elder abuse. The Trust has now produced training videotapes for home health nurses, emergency personnel, and law enforcement officials.

Group Practice Study. The Pennsylvania Medical Society contracted with the Trust to conduct a study exploring ways the Society can satisfy the needs and desires of group practices and physicians in those practices. The Trust conducted focus groups with physicians in group practices, interviews with group practice administrators, and a written survey of administrators.

Mature Drivers' Task Force. Since 1992, the Trust has administered the Mature Drivers' Task Force which educates older adult drivers on their special needs. Highlights of the task force's 1993 activities include distribution of a video on mature driving, a project to teach grandparents how to safely transport grandchildren, and the promotion of driver refresher courses in license renewal mailings.

1993

Medical Student Health Insurance Study. At the request of the Pennsylvania Medical Society, the Trust designed and distributed a questionnaire on the health insurance needs of Pennsylvania medical students. A random sample of students across the state received the survey.

Pennsylvania Academy of Family Physicians (PAFP) Organizational Study. The Trust utilized its marketing capabilities to assist the PAFP in assessing its organizational structure and its ability to best serve members. The Trust developed a questionnaire for PAFP members, which solicited their opinions on various aspects of the PAFP. As follow-up, the Trust will make recommendations on how the PAFP can better serve its membership.

Pennsylvania Medical Society Leadership Conference. The Trust again provided program development support for the Society's annual Leadership Conference.

Physician Referral Network. The Trust continued to provide administrative support to the Pennsylvania Medical Society's efforts to establish a statewide Physician Referral Network (PRN). The PRN was established to: improve access to essential health care services for Medical Assistance and uninsured patients; coordinate the referral of patients from one health care professional to another; and document the need for and use of medical services by the poor and medically indigent.

Task Force to Enhance Physician Involvement Study. The Trust staff conducted focus groups for the Society's Task Force to Enhance Physician Involvement to discover reasons why more physicians are not involved in Society activities. Trust staff presented the study results to the Pennsylvania Medical Society Board of Trustees.

Visitor's Day. Over the years, the Trust has received inquiries from several state medical societies about establishing their own charitable organizations. In response, the Trust set aside a day for interested parties to visit the Trust and learn more about our activities. Representatives from Virginia, Texas, and Michigan attended the visitor's day in September.

Keystones of Public Health

In an effort to return to its roots, the Trust established Keystones of Public Health in 1992. Keystones is a coalition focused on education and information dissemination relating to Pennsylvania's public health priorities. The Trust has been investigating the best way to become involved in the public health arena and, as a result, has been conducting several different activities.

During 1993, Trust staff wrote a series of articles focusing on physicians involved in public health which were published monthly in PENNSYLVANIA MEDICINE. The articles provided resources for physicians interested in more information. During 1993, topics included diabetes management, child abuse, nicotine addiction, health and fitness, migrant health care, and the need for local health departments.

In November, Keystones kicked off the first of many efforts to bring public health professionals together. Keystones sponsored a marketing seminar for Pennsylvania public health professionals. Over 50 individuals attended and gave the seminar a positive review.

For Keystones to be effective, the Trust feels it is crucial to bring together representatives from the medical and public health communities, as well the private and public sectors. In December, Keystones invited representatives of these communities to the initial meeting of Keystones' steering committee. The committee discussed issues facing the Keystone initiative and future directions for the coalition.

1993

Physicians' Health Programs

About the PHP

Since 1989, the Physicians' Health Programs (PHP) has been a thriving component of the Trust's services. The PHP offers advocacy and support to physicians experiencing impairment from physical, emotional, or mental conditions. Drug and/or alcohol addiction is the primary cause of impairment with which the PHP deals.

A physician certified in addiction medicine leads the PHP's experienced staff. The staff of four works diligently to assist physicians, hospitals, colleagues, and family members with impairment issues.

The PHP has helped 1,073 physicians through the recovery process. The PHP's active case load is 472. While most PHP participants refer themselves to the program, other referral sources include hospitals, colleagues, and the State Board of Medicine. Anyone can refer a physician to the PHP. The program treats each referral with complete confidentiality.

When someone contacts the PHP about a physician, the PHP collects appropriate background information and assists in intervening with the physician. Impaired individuals are encouraged to enroll in the program. Upon enrollment, the physician must agree to enter a course of treatment deemed appropriate by the medical director. This includes active participation in a treatment program, attendance at support programs, and monitoring by the PHP for three to five years. The PHP sets the course of action based on each individual's needs.

The PHP's services are available to any Pennsylvania physician, medical practice, or hospital.

1993 Activities

The PHP's primary activities are intervention and monitoring of physicians, but the PHP is active in other areas as well. Outreach to medical students is becoming an increasing priority for the PHP. In 1993, the PHP staff made presentations to medical students at Hahnemann University, Pennsylvania State University, Temple University, the University of Pennsylvania, and the University of Pittsburgh. It also published a brochure targeted to medical students about impairment and PHP services. This outreach teaches medical students that physicians are not immune to drug and alcohol addiction, enables them to recognize the signs of impairment, and lets them know PHP services are available to them.

Hospital outreach is another important element of the PHP. The PHP is available to make presentations on impairment or to help hospitals establish their own internal committee or policy to deal with impairment issues. The PHP developed a booklet on this topic, which is available to any interested organization. In 1993, the PHP made presentations to 14 hospitals statewide and is formulating a comprehensive plan to ensure broader outreach to hospitals.

The PHP also published two newsletters for hospitals who have supported the program financially. The **PHP Update** is distributed to all contributing hospitals. The **Key Supporter Special** is sent to contributing hospitals which have reached the Key Supporter giving level ($10 per medical staff member). In 1993, the newsletters covered stress management, recognizing the chemically dependent physician, and graduated re-entry to practice. The PHP also placed bimonthly advertisements in PENNSYLVANIA MEDICINE, offering its services to physicians.

In addition to hospital outreach, PHP staff spoke to physicians from three county medical societies in 1993: Monroe, Allegheny, and Dauphin. The county medical societies provide a good outlet for informing physicians of the availability of PHP services. PHP representatives also participated in conferences sponsored by other related organizations, such as the American Medical Association, the American Academy of Psychiatrists, and the American Psychiatric Association.

In April, the PHP Committee and staff held a retreat to evaluate the program's current status and progress. They decided to continue working closely with the State Board of Medicine, but not accept financial

Physicians' Health Programs

continued

support from it. They also committed to increasing efforts to garner financial support from Pennsylvania hospitals.

Additionally, the PHP conducted personal interviews with Pennsylvania Medical Society leaders and distributed a written survey to all attendees at the annual House of Delegates meeting. The research results indicated that the leaders want more information about the PHP and recognizing physician impairment. The staff continues to evaluate the program and assess ways to improve services to physicians.

Financial Assistance

In 1989, the PHP established a Re-Entry of Practice Loan program. The program enables PHP participants to receive up to $1,000 a month for one year for living expenses while they find employment or re-establish practice. Since the program began, the PHP has loaned over $98,000 to 12 recovering physicians.

Because of financial concerns, the PHP Committee and Trust Board have decided not to continue offering the program in the future.

Financial Support

In 1993, the PHP received $286,000 in generous contributions from hospitals, individuals, and related organizations. The sustained support of these parties enables the PHP to continue providing important services to the Commonwealth's physicians and hospitals.

The PHP extends special thanks to the Pennsylvania Medical Society Liability Insurance Company (PMSLIC) for its generous annual commitment to the program. Since 1987, PMSLIC has provided an annual grant to underwrite the program.

To contact the PHP

The PHP can be reached at (800) 228-7823 between 8 a.m. and 4 p.m. Monday through Friday. At all other times, you may leave a confidential message by calling (717) 558-7817.

Mission Statement

The mission of the Physicians' Health Programs (PHP) is to assist physicians and physicians-in-training to understand, accept, and cope with the physical, emotional, spiritual, and mental conditions which impair or threaten to impair their health and well-being, and thus help the physicians to meet the usual and acceptable standards of medical care required of licensed physicians in the Commonwealth of Pennsylvania. In doing so, the program shall act to promote the health and attitudes of physicians, and thus the safety and welfare of the public.

In order to be successful in its mission, the PHP will assist the family of the impaired physician through support, guidance, education, and encouragement in order to enhance their well being.

Consultation, education, and support shall be provided to both the physician and his/her family under the stress of professional liability litigation.

The Institute for Physician Leadership

In 1990, the Trust established The Institute for Physician Leadership to train physicians to be effective leaders of their institutions and professional organizations. The Institute takes physicians out of their clinical paradigm and works to augment their human relations and organizational skills. The Institute shows medical leaders new approaches to:

- Communicating one-on-one and in small groups;
- Drawing positive results from conflict;
- Using active listening skills to communicate;
- Motivating peer participation;
- Running more efficient meetings;

- Injecting team concepts into committees; and
- Negotiating.

In addition to working with physician leaders, the Institute uses its resources to assist the staffs of county medical societies and other related organizations to serve their audiences more effectively.

More than 1,200 individuals have participated in an Institute activity in the last three years. In 1993 alone, over 600 physicians and staff members attended a program.

Sponsorship

During its three years of pilot operation, the Institute was underwritten by The Educational and Scientific Trust, the Pennsylvania Medical Society, and Jefferson Medical College . The Institute extends special thanks to Jefferson for its three-year commitment to the program. Institute expenses are offset by workshop fees.

Additionally, the Upjohn Company gave a generous grant to cover the expense of the town meeting at the Pennsylvania Medical Society Leadership Conference.

Leadership Resources Available

The Institute publishes a biannual newsletter entitled **Leadership Digest**. The digest provides recipients with current case studies and information on different components of effective leadership. 1993 topics included maximizing employee potential, listening, total quality management, communications skills, and stress management.

In addition to the digest, the Institute has resources on other pertinent topics including listening, negotiating, team-building, meeting administration, presentations, conflict resolution, and leadership.

Mission Statement

The Institute's mission is enhancing the influence of physicians in the health care system so that quality may be preserved.

The Institute for Physician Leadership

THE INSTITUTE FOR PHYSICIAN LEADERSHIP

Administrative Services

One of the important ways the Trust supports organized medicine is by providing administrative services to related organizations. In 1993, the Trust provided financial services to 17 groups and newsletter writing, editing, and desktop publishing services to six.

Public Relations

The Trust undertook several public relations activities during 1993. We continued publishing our quarterly newsletter, **Connections**. Circulation now includes over 7,000 individuals and organizations. The newsletter serves as the primary vehicle to disseminate timely activity updates to our contributors, loan borrowers, related organizations, and other friends.

The Trust showed a videotape about the Trust's activities to the boards of the Pennsylvania Medical Society, the Pennsylvania Medical Society Liability Insurance Company, and the Keystone Peer Review Organization. The intent was to educate the leadership of our related organizations about the Trust's many endeavors.

The Trust and the PHP ran monthly advertisements in PENNSYLVANIA MEDICINE and distributed copies of the advertisements to county medical society bulletin editors. Ten county medical societies published advertisements on behalf of the Trust.

The PHP distributed an educational videotape about the program to all hospitals who contributed in 1993. The videotape conveys details about the program's services and the assistance offered.

Note 1: The financial statements shown in this report are unaudited. Audited statements are being prepared and will be available upon request in April.

Note 2: Current unrestricted funds are those funds used to maintain normal operations of the Trust (including projects and programs) and do not require prior approval for their use. Current restricted funds are funds held in reserve by the Trust not designated for a specific purpose, but cannot be used without the permission of the Board of Trustees (or others for whom the fund is maintained). Endowment funds are gifts to the Trust to use revenue generated from that gift for a specific purpose.

Note 3: Investments are recorded at cost. In 1993, market value is $2,392,051; in 1992, market value is $660,552.

Note 4: Prior Period Adjustments: Adjustments reflect school and residency loan interest accruals to report interest in proper year, and the transfer of the Medical Benevolence Fund from the Pennsylvania Medical Society to the Trust in 1993.

Note 5: Interfund Transfers: Interfund transfers are transfers of funds within the Trust, having no net effect on the fund balance of the organization. However, these transfers must be noted on the financial statements.

Development

The Trust has experienced tremendous growth over the last decade. This growth can be largely attributed to the continued dedication of our generous supporters. Raising funds to support Trust programs remains a priority. As we continue to expand, we are exploring new avenues of funding.

At its 1993 planning retreat, the Board requested the formation of a long-range development plan. The plan includes all major programs of the Trust and coordinates solicitation appeals. The Trust will begin implementing the master plan in mid-1994.

The Trust's planned giving program continued to grow during 1993. We were notified of three planned gifts throughout the year. To promote this way of contributing, the Trust placed articles and advertisements in PENNSYLVANIA MEDICINE, and staff conducted workshops at several Pennsylvania Medical Society Alliance functions. To comply with the Commonwealth's legal requirements, the Trust established a separate corporation, the Medical Legacy Fund, to accept and manage planned gifts.

In 1993, 5,140 physicians and other friends of the Trust contributed $226,467. In

1993

Development
continued

addition to an administrative grant, the Pennsylvania Medical Society offered its members the opportunity to make a $10 contribution on their 1993 dues statement. Almost 4,000 members took advantage of this opportunity and gave $39,950.

More than 100 individuals, hospitals, and other related organizations gave $91,293 in support of the Physicians' Health Programs. Additionally, the Pennsylvania Medical Society Liability Insurance Company (PMSLIC) provided a generous administrative grant to help underwrite the costs of the program.

Contributor Recognition

The Trust is pleased to recognize those physicians, hospitals, related organizations, and other friends whose support continues to ensure our success. Their giving demonstrates their commitment to The Educational and Scientific Trust and the future of medicine. The Trustees and staff extend our sincere gratitude and are pleased to recognize our 1993 contributors.

Contributors to The Educational and Scientific Trust ***Boldface*** *indicates charter donors/charter donor organizations.*

The College: *Members of the Trust's most distinguished group of benefactors contribute $1,000 or more each year.*

THE ELI LILLY AND COMPANY HISPANIC HEALTH INITIATIVE

OUR COMMITMENT:

TO ENHANCE THE DELIVERY OF OPTIMAL HEALTH CARE TO THE HISPANIC COMMUNITY

Through our Hispanic Health Initiative, Eli Lilly and Company joins with you in committing the time, the talent, and the resources necessary to help enhance the quality of health care in the Hispanic community. As part of that commitment, Lilly makes available an array of programs and materials designed to benefit Hispanic health care.

- STUDENT PROGRAMS
  Support programs for Hispanic high school and medical school students to increase the number of Hispanics entering the health care professions
- PATIENT EDUCATION MATERIALS AND PROGRAMS
  Culturally sensitive materials in Spanish to enhance quality of care
- PHYSICIAN INFORMATION PROGRAMS
  Continuing medical education and clinical practice materials in a variety of formats, including symposia

Eli Lilly and Company
Hispanic Health Initiative™

1994 SYMPOSIA PROGRAM:

Focus on Hispanic Health

Join Hispanic opinion leaders taking a critical look at the diagnosis and treatment of three diseases of special significance in Hispanic communities: diabetes, depression and gastrointestinal disorders

WHERE AND WHEN

Miami	*April 23*
New York	*May 7*
Chicago	*May 25*
Houston	*September 10*
Anaheim	*October 22*

Ask your Eli Lilly and Company sales representative or call 1-800-233-2049 regarding symposia registration or additional information on the Hispanic Health Initiative.

...a promise to defend...

HERE ARE THE FACTS: Over 25% of America's Physicians were embroiled in a malpractice issue in the last 12 months. More than 80% of those malpractice allegations will be closed without an award for damages. Your professional reputation and your personal assets are on the line when your professional liability carrier is not both financially sound *and* experienced in the law and the judicial system.

WHEN THE ISSUES ARE LEGAL, NOT MEDICAL — when the allegations are frivolous, or highly emotional — you need a company and legal representation that understands the problem and has the experience to resolve the issue. The Medical Protective Company has specialized in defending doctors since 1899. Our legal and claims management experience is unmatched by any other insurer in the U.S.

FOR MORE INFORMATION on how we can protect your professional reputation and your personal assets, call your local Medical Protective General Agent at 1-800-344-1899.

PHYSICIANS WANTED

Western Pennsylvania—Board Certified or prepared emergency physicians needed for staffing a community hospital emergency department near the Ohio/Pennsylvania border. Please send CV to P.O. Box 99431, Pittsburgh, PA 15233-0431.

Pennsylvania—Physician group seeks full-time and part-time physicians for an emergency department of community hospitals in central and western Pennsylvania. Please send resume to P.O. Box 99431, Pittsburgh, PA 15233-0431.

Pittsburgh, Pennsylvania—Penn Group Medical Association (PGMA), a 100-physician multi-specialty group practice affiliated with the largest HMO in Pittsburgh, is seeking BE/BC physicians in: family practice, internal medicine, pediatrics, ob/gyn, and psychiatry. We are formally affiliated with major teaching hospitals and leading community hospitals in Pittsburgh. PGMA serves eight ambulatory care centers, all conveniently located near cultural, educational, recreational, and corporate activities. Excellent salary, and fringe benefits. For confidential consideration contact: Angela Lascola, HealthAmerica, 5 Gateway Center, Pittsburgh, PA 15222, or call collect (412) 553-7502.

Physician Wanted—Internal Medicine/General Practice must be bilingual English/Spanish physician full- or part-time to join fine busy practice near Philadelphia suburb of Cheltenham. Please call M. Finnegan (215) 549-3000.

Full-time emergency room position available in a 400-bed suburban hospital with 44,000 visits. Board certified/eligible in emergency medicine or other specialty with emergency room experience. Excellent salary/benefit package. Contact: Clarke Hankey, MD, Emergency Department, St. Clair Hospital, 1000 Bower Hill Road, Pittsburgh, PA 15243; (412) 561-4900.

Physician—Part-time/weekends modern multi-specialty/urgent care center in northeast Philadelphia suburb. Potential for future full-time position, if desired. Contact Mrs. Lipson, 215-638-0666.

Emergency Physicians—Emergency Physician Associates is seeking quality ED physicians for a variety of practice opportunities. Director and staff positions are available. EPA contracts with hospitals in NJ, PA, and MD for the provision of emergency medicine, urgent care and industrial/occupational health services. Our client hospitals are located in rural to urban areas with patient volumes ranging from 10,000 to 75,000. At EPA we offer physicians competitive compensation, flexible schedules and shifts, occurrence-based malpractice insurance, a variety of practice settings to choose from, cooperative working environments, and supportive medical directors and corporate staff. Interested candidates may contact EPA at 1-800-848-EPA-1.

Lancaster County, Pennsylvania—Excellent opportunity for BC/BE family physician to join a well-established 5-physician practice in a flourishing small community in southcentral Pennsylvania, boasting excellent schools and proximity to educational and cultural centers. The practice offers a full gamut of family practice experience except obstetrics in a spacious, modern computerized facility. Competitive salary and benefit package for long-term association. Contact David Bowers, MD, 562 West Second Ave., Lititz, PA 17543; 717-626-2167.

F.P. Residency Program—Full-time faculty position available in prestigious F.P. Residency Program. Must be F.P. residency-trained. Contact Wm. H. Rodgers, MD, Suite 409, 1330 Powell St., Norristown, PA 19401; (610) 277-0964.

Sleep-Away Camp! Camp doctor positions available. Camp Towanda, Honesdale, PA. 150 acres, all land & water sports, co-ed, 260 campers, 4 RNs, terrific atmosphere. Bring the whole family. 1 or 2 week slots available. Call Mitch today 201-666-2411.

Board certified/prepared emergency physician needed for a modern ED in beautiful N.E. PA. Flexible schedule and generous compensation. Contact Martin Mikaya, MD, Memorial Hospital, Towanda, PA 18848; (717) 268-2274.

Family Practice—Large PHO of 60 physicians in suburban Philadelphia, seeking B/C FPs and OB/GYNs for community based group practices. Also seeking EM physician for hospital service. Excellent salary and benefits, 4 weeks vac., 1 week CME, academics, physician driven organization located in a corporate area. Contact Al Yannelli, Yannelli, Randolph and Co., 997 Old Eagle School Rd., Ste. 202, Wayne, PA 19087; 1-800-292-6354.

Internist in primary care practice or family care practice, board certified or board eligible, to join a group practice with subspecialties. Close to Poconos, Philadelphia, and New York. Guaranteed income the first year with partnership offer the second year. Box 400, PENNSYLVANIA MEDICINE, 777 East Park Dr., P.O. Box 8820, Harrisburg, PA 17105-8820.

Physician—Well established hospital based, multi-site occupational medicine program seeks full-time physician. Duties include all phases of occupational medicine with medical screenings, acute injury management, and return to work evaluations. Experience in occupational medicine is not required. Position is salaried with excellent benefit package. Send CV and names of three references to Box 399, PENNSYLVANIA MEDICINE, 777 East Park Dr., P.O. Box 8820, Harrisburg, PA 17105-8820.

Do you know someone who needs nursing care in their home?

We have a special person to take care of your special person.

Are your patients entitled and/or eligible for Medicare benefits? If you are not sure call **MEDICAL PERSONNEL POOL** and we will help you get the answer. Bear in mind that a person need not be a Social Security recipient or over 65 to receive Medicare services. People who are disabled for 2 years or more are eligible as are people who are in dialysis for 6 months of longer. **MEDICAL PERSONNEL POOL** provides a full range of **HOME HEALTH SERVICES,** as well as private duty nursing. We provide most of these services in the home as well as in the hospital and nursing home.

"Ron's Rule—I give myself one week to meet new people and start having fun on a locum tenens assignment. It hasn't failed me yet."

Ron Richmond, MD, joined the CompHealth locum tenens medical staff when he completed his residency. He wanted to travel. He loves to meet people. A little time off sounded really good. And he thinks being exposed to different types of medical practice will serve him well when he returns to his hometown to establish a community health center.

A singer. A board-certified family practitioner. A soft-spoken New Yorker. Ron Richmond knows...

It's a great way to practice medicine

American Medical Forensic Specialists, Inc.

Spring into action! We are conducting a search for BC/BP primary care physicians with emergency medicine experience for EDs in the Pittsburgh, Philadelphia, and Allentown areas. Volumes range from 9,000 to 25,000 annual visits. We offer a wide variety of opportunities from primary to limited availability practices. We also have a summertime opportunity at a free standing ED clinic in Bethany Beach, DE, for those of you who are looking to escape for a weekend, week or even a month. Enjoy the benefits of no on-call responsibilities, flexible scheduling and excellent remuneration. For confidential consideration, please call a physician recruiter at 1-800-367-8952.

Internal Medicine—Southwestern Pennsylvania, Board Certified/Board Eligible to join busy, established two physician practice. Forty miles from downtown Pittsburgh, 20 miles from mountain ski resorts. Community combines the advantages of an urban setting with a variety of options for suburban or country lifestyle. Associated with regional hospital with a university medical center affiliation. Competitive salary and benefits. Send letter and CV to Reply Box 398, PENNSYLVANIA MEDICINE, 777 East Park Dr., P.O. Box 8820, Harrisburg, PA 17105-8820.

Internist—Philadelphia Health Associates, the Delaware Valley's largest multi-specialty group practice, is seeking Board certified/Board eligible internists to meet the needs of our expanding practice in Philadelphia. Excellent career opportunity in a prepaid/fee-for-service practice for a physician with a demonstrated aptitude in primary care. We are affiliated with major teaching hospitals and leading community hospitals. Attractive package includes base salary plus incentive program, malpractice insurance, and comprehensive benefits. Address inquiries and resumes to Marcia Coleman, MD, Medical Director, 3550 Market St., Philadelphia, PA 19104; FAX 215-823-7984; or phone 215-823-8810.

EVERYPLACE YOU WANT TO BE IS EITHER DOWNSTAIRS OR DOWN THE BLOCK.

Conveniently located, the beautifully appointed Sheraton University City features reasonable rates, outstanding meeting facilities and Smart Alex, our lively restaurant that's a local favorite. Just down the block are the University of Pennsylvania and Drexel University, as well as the Hospital of the University of Pennsylvania, the Children's Hospital of Philadelphia and Presbyterian Hospital. But every bit as important as our great location is our great service. You'll find our staff to be friendly, competent and quick to take care of your needs. Please call 215-387-8000 or call toll free 800-325-3535 for ITT Sheraton Worldwide Reservations.

Don't Blame Hillary...

Mike Magee, MD

A voice from within health care encourages physicians and hospitals to unite.

Law: Don't blame Hillary for removing the provider seat from the table. On the community, state, and national levels, we have clearly demonstrated that we will not cooperate with each other. If you were trying to formulate a plan of action to handle the complex and interwoven issues related to health care, would you talk to us? Whether you visit a community hospital, or review a policy set in state and national hospital and medical associations, it is abundantly clear that we can't even agree on what direction to go. We view each other as competitors. Our major motivations have been money and control.

Theorem 1: Our primary energy has been diverted toward facing each other off. If we could capture the energy that we have wasted over the years in confronting each other and direct it positively, there would be no health care crisis. Whether one is in a small 100-bed rural hospital or a complex tertiary teaching institution, our style is fractious, and our approach to problem solving positively inefficient and exhausting. We have made poor use of each other's talents and wasted time in confrontation that might better have been spent in holding a patient's hand, participating on a school board, or contributing to solutions to real health and social issues.

Theorem 2: Our educational framework is archaic, reinforcing old interfaces, a philosophy of separatism and "hold out" postures. In the years I went to medical school, I never came in contact with either a health management or nursing student. Over the following five years of surgical training, I never attended a lecture nor entered into a discussion with the other health professionals at my hospital. I was unaware of their language, approaches, or tools as they were unaware of mine.

More than this, I never heard the leadership within medical staff, management, or nursing recognize this total lack of interdisciplinary orientation and training as an issue. In many medical, nursing, and health management schools today, it remains a non-issue.

Theorem 3: Our patients have grown up and they don't want us at the table. When I was a child in the 1950s, my father was in general practice in an office that was attached to our home. The building and the practice were an extension of his and our lives. The care he provided was heavily humanized and moved in sync with the priorities of his patients and the community.

There was a high degree of trust and a realistic understanding of what was possible. He was as interested in a case of measles as he was in the marital difficulties of a family. His care included mind, body, and soul; money was not an issue. He put in time, huge amounts of time—time to listen, time to touch, time to laugh and cry. He never got exhausted because all the while that he was working, he was being revitalized by patients who cared as much for him as he did for them.

Our patients are looking for that relationship again. The health care revolution in many ways reflects a desire to turn the clock back to a time when doctors gave time.

Theorem 4: Hillary is closer to our patients than we are. It is not she that has denied us a seat, it is "them" and ultimately "us." Our loss of control of the health care transformation has been progressive and predictable. It has spanned three decades, during which we have done little to acknowledge that our patients have grown up and are fully capable of assisting in reordering health care priorities. By diverting our energies away from the challenges of transformation so that we might continue to compete and reinforce roles that are inconsistent with the new spirit of participation and collaboration, we have created our own problem.

The good news is, at the core, we still care. We still possess the needed knowledge. We still have the energy to work together and, if we allow ourselves, to be led by positive leaders.

SOMETIMES THE BEST DEAL IS THE ONE YOU HAVEN'T HEARD ABOUT.

Maybe you haven't heard about the Medical Inter-Insurance Exchange (MIIX). After all, we're a relatively new player in Pennsylvania's medical professional liability insurance marketplace.

But ask your counterparts in New Jersey, and you'll find we've been getting rave reviews since we wrote our first policy there in 1977. We're proud that 98 percent of our 9,000 insured physicians renew their policies each and every year. With such an outstanding track record, we must be doing something right.

Perhaps it's our **innovative products**, such as our new **$500,000** HIV benefit that provides income protection — at no additional charge — for physicians who become HIV positive. We were the first professional liability insurer in the state of Pennsylvania to offer this coverage.

Or maybe it's our **commitment to service**, which includes 24-hour customer assistance and a claims staff that's the best in the industry. Our insureds know that MIIX makes sense financially, too, considering our outstanding discounts for new and part-time practitioners. We also offer flexible premium payment plans that help you manage your money.

Because MIIX is a **physician-owned company**, you can be assured that everything we do is designed with your best interests in mind. Call us today so you can join your peers who are already benefiting from the MIIX difference.

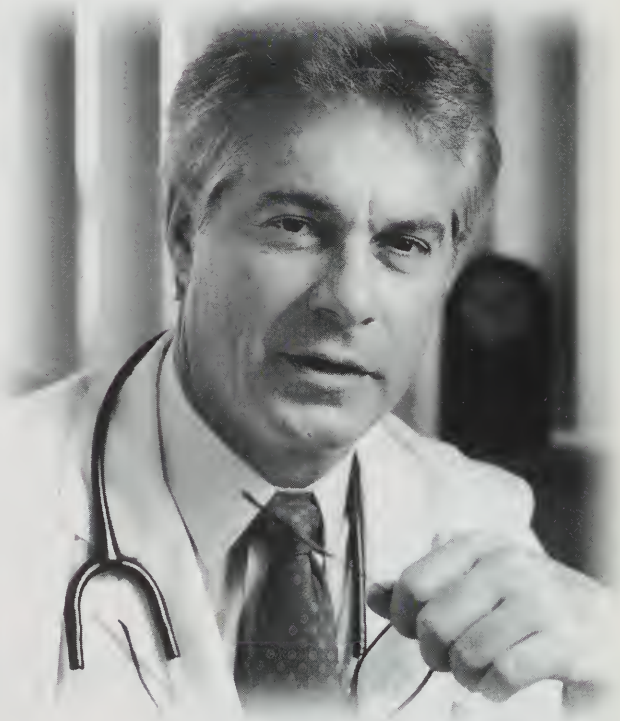
"Unfortunately,

he was already sitting in my examining room. This guy was a walking liability suit looking for a victim. He was angry, non-compliant. It was one of those rare, no-win cases and, well, I guess my number was up.



Then I remembered PMSLIC. So I stepped into the next room and gave them a call. They put me in touch with a member of their Risk Management team, who advised me of the relevant legal issues and the implications of each of my alternatives. Right on the spot. As a result, I was able to make the best medical recommendation with the peace of mind that comes from knowing my legal interests were also protected. I guess that's what it's all about. Peace of mind. The kind you only get from people who really take the time to help. That's excellent service. I'll never change carriers."

MEDIGRAM

HEARING SET ON MEDICARE LAB OVERPAYMENT ISSUE: Blue Cross-Blue Shield of Maryland—appointed to hear appeals regarding Medicare clinical lab overpayment cases—has set June 3 as the hearing date for the Society's consolidated appeal. The carrier has agreed to permit joint representation of physicians, at no cost to members, for what is probably the most important and universal issue—the "at fault" issue. *Members who have not called or sent in a representation form must do so immediately to assure their inclusion in the appeal.* Inclusion in this appeal would apply to the "at fault" issue only; physicians who wish to raise other issues should consult personal counsel. For Q&A, see page 21.

COMMENTS SOUGHT ON TRAVELERS MEDICARE REIMBURSEMENT: The Pennsylvania Medical Society has learned of instances in which The Travelers Medicare has reimbursed physicians at a level less than that of the federal Medicare fee schedule. The Society contends that a reduced reimbursement is inappropriate and prohibited by federal statute. *Physicians' offices experiencing reduced reimbursement from The Travelers Medicare should call the Society's Department of Medical Economics at (800) 228-7823 or (717) 558-7750.* All concerns will be documented and forwarded to the AMA, which is monitoring the situation and compiling comments to bring to The Travelers.

SENATE TEMPORARILY TABLES OPTOMETRY BILL: The Senate on April 18 temporarily tabled Senate Bill 1061. Strongly opposed by the State Society and the Academy of Ophthalmology, the bill proposes amendments to the Optometry Practice Act to allow the optometric licensure board inappropriate powers to expand an optometrist's scope of practice. The legislation, sponsored by Senator Roy Afflerbach (D-Lehigh), would allow the use of therapeutic pharmaceutical agents by optometrists, without input from any physician in the process of creating clinical training standards. The bill may be brought back to the Senate calendar any time after the Senate resumes session on May 16.

ACTION PROBABLE ON PHYSICAL THERAPIST BILL: Action in the House is probable this spring on House Bill 1531, which would permit physical therapists to diagnose and treat patients without prescription from a physician. The Society, which presented testimony against the bill last summer, continues to oppose the bill. At press time, amendments to the bill were being circulated for comment. Representative Dwight Evans (D-Philadelphia) is prime sponsor.

HEALTH DEPARTMENT PROGRAM PROMOTES HEALTHY BABIES/KIDS: The Pennsylvania Department of Health, Bureau of Maternal and Child Health—in collaboration with other state agencies, the State Society, and other provider and advocacy groups—has developed a statewide outreach project called, "Love 'em with a Checkup." The program offers statewide, toll-free Healthy BABY/Healthy KIDS Help Lines to provide callers with specific information about where they can obtain care and about the programs available in Pennsylvania to pay for care. The Help Line is accessed by calling (800) 986-BABY (for pregnant women) and (800) 986-KIDS (for families with children). Help Line counselors also provide follow-up and advocacy services as needed. Look for a complete overview of the program in PENNSYLVANIA MEDICINE this summer.

DELEGATION PREPARES FOR AMA ANNUAL MEETING: The Pennsylvania Delegation to the AMA will bring 10 resolutions to the AMA's annual meeting, to be held June 18-22, 1994, in Chicago. The resolutions address such issues as tobacco and smoking, violence and the media, health system reform, health insurance choices, physician participation in Project USA, and coding. Elections will also be held during the meeting. Jonathan E. Rhoads, MD, Society vice president and a member of the Society's Board of Trustees, is seeking election to the AMA board; William H. Mahood, MD, Flourtown, is seeking reelection to the Council on Medical Service. Look for coverage of the meeting later this year.

SOUND PROTECTION

Choosing a professional liability insurer is a major decision–too important to play by ear.

Princeton Insurance Company's high-quality investment portfolio and our conservative approach to loss reserving have made us the choice of 22,000 in the medical and health care community.

We're not just blowing our own horn. Standard & Poor's has awarded us a claims-paying ability rating of "A."

That's sound protection through financial strength and stability.

Princeton. It's worth it!

PRINCETON INSURANCE COMPANY

Keeping Ahead of an Avalanche of Change

John W. Mills, MD
Medical Editor

Our profession is in the throes of change. Nobody really disputes that. In fact, most of our readers might say that is an understatement. The changes that have evolved since the beginning of the century are truly remarkable. Technological advancement has accelerated to mach speed in this century, and we will witness even more rapid change in the twenty-first century.

While we have embraced this rapid advancement, we have had trouble keeping pace in our personal lives. New freedoms, new diseases and illnesses, and serious social, international, and moral questions remain unanswered and threaten our very survival.

"One of the most recent and important actions the board has taken is the formation of a wholly owned, for-profit subsidiary... known as PMSCO."

So it is with medicine. We are proud of our U.S. health care system—the envy of the world. But we have some serious problems in our arena, most of which stem from great technological advances in medicine. We can never revert to former years, and we wouldn't want to; the status quo would be unacceptable. Nostalgia nudges us back at times, but we know it's really one of our defense mechanisms when we are pushed along by our modern way of life.

That's been one of the AMA's problems in times past—failure to move ahead with the advancement. However, I do feel they have gotten the message, perhaps spurred on by health system reform. Likewise, the State Society has become upbeat, progressive, and much more responsive to members' needs in the past decade.

This is not meant as criticism of either group, but rather to point out that change and advancement are taking place rapidly now in an effort to portray an effective organization of physicians and *for physicians.* Neither organization can be characterized now as a stodgy male conclave, bent on the status quo.

Your Board of Trustees seeks to address the myriad changes affecting Pennsylvania physicians both on the state and national level. A biannual board retreat looks with an in-depth focus at the changing face of medicine.

Our executive vice president, Roger Mecum, continues to organize our State Society staff, in light of the ever-changing medical scene, to help position us as Pennsylvania's medical "spokesgroup" par excellence. His contacts "on the hill" in Harrisburg, as well as those with labor, industry, and insurance, have helped immeasurably to keep Pennsylvania physicians on equal terms in health care issues. Along with the board, Roger has helped us keep a steady helm in the stormy sea of health system reform swirling around us.

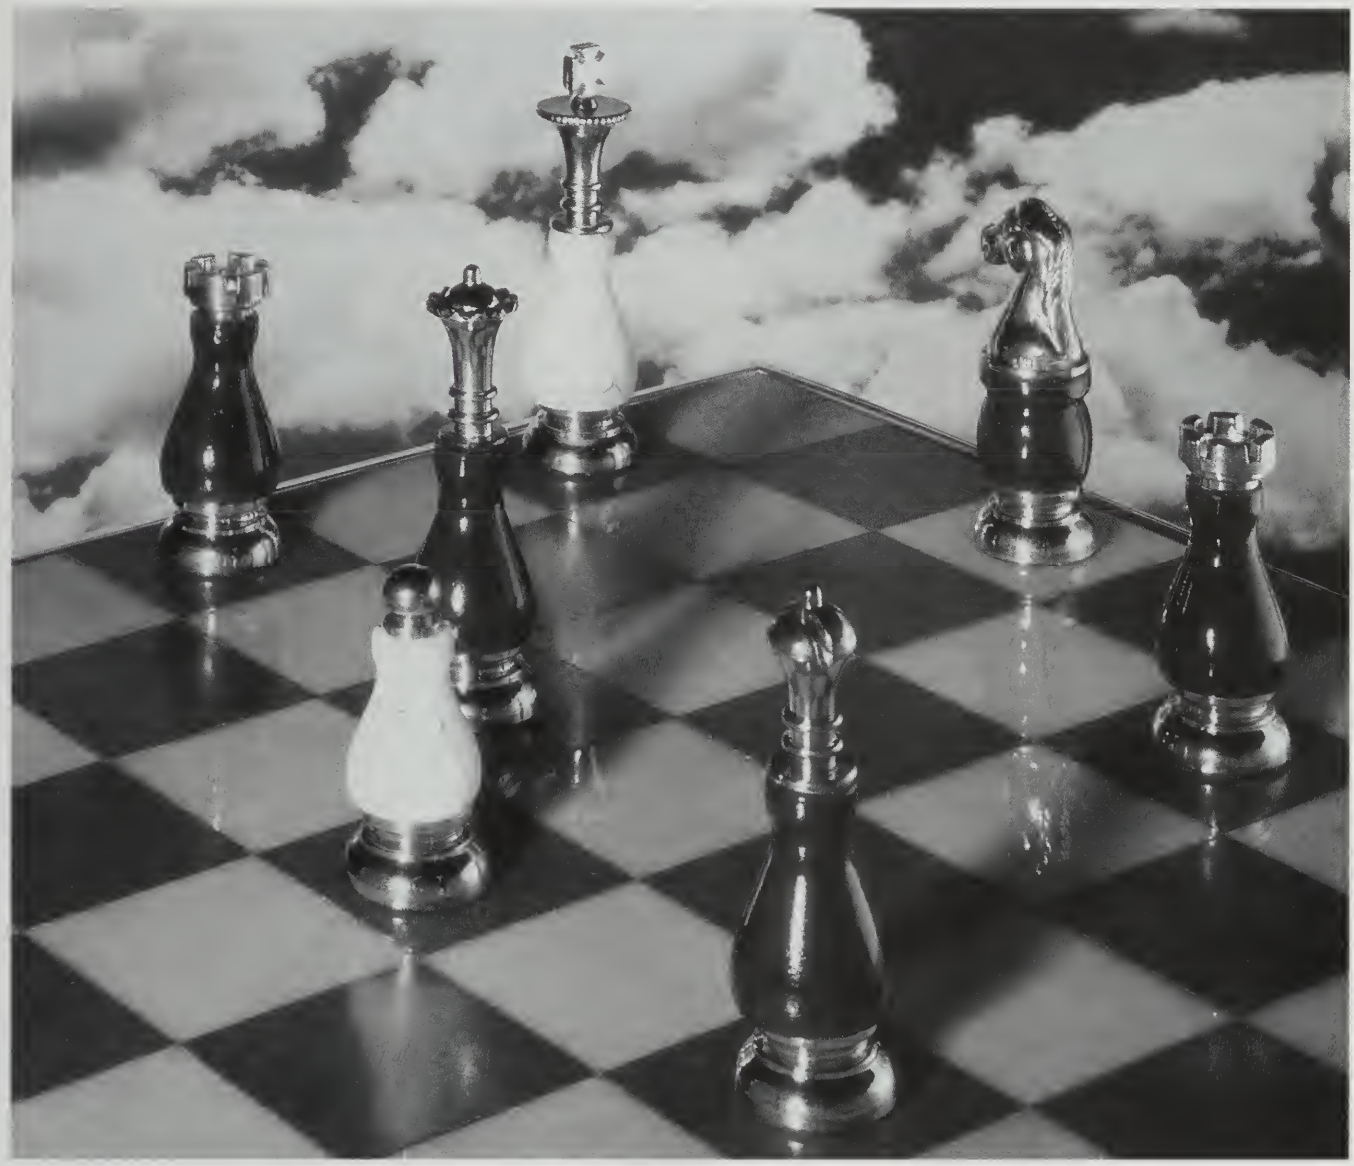
Our board retreat will be in July this year. We will be taking a hard look at focusing our resources and efforts in more effective ways for you, our members. Regional presence out of Harrisburg, structural changes, representative leadership, and enhancing membership value are some of the issues we'll be wrestling with.

One of the most recent and important actions the board has taken is the formation of a wholly owned, for-profit subsidiary, similar to PMSLIC and KePRO, known as PMSCO—PennMed Member Services Company (see page 24).

PMSCO's main effort is to help physicians organize into effective groups so that they can deal as a legal entity with hospitals to form physician-hospital organizations (PHOs), or to contract with insurers to provide health care services for employees or other groups. Initially, implementation of network consulting services is to be PMSCO's top priority, along with completion of the management service organization's business plan.

If county medical societies or hospital medical staffs are interested in learning more about forming effective physician organizations, call the Society to schedule a speaker who will discuss integration options for physicians and what services PMSCO can provide. Rest assured, fees will be extremely competitive for State Society members. The advice and expertise will be top notch.

Change? Yes, we're in an avalanche of change. Don't be swept away, for the maze out there is formidable. Let your Society help you chart a successful course into the twenty-first century.



In claims, it's the endgame that counts

A malpractice claim brought against a physician brings to mind two things: reputation and money. We consider a third: the bond of care and trust between physician and patient.

Successful endgame results resolve all three. To do that, you need a consistent, winning strategy. Strategy that considers the merits of the claim, the complex court system and the National Practitioner Data Bank. Knowing when and how to fight is crucial.

In little more than a decade, we've achieved checkmate in over 95% of the cases taken to court. A vigorous defense, a successful conclusion for our policyholders. And always, your participation in every decision. When we need to settle a claim, settlements are fair to both parties.

We're here to serve physicians, patients and the healthcare field. How is this done? With financial stability, competitive premiums, integrity, and the right team members.

Physicians Insurance Company is dedicated to making all these elements work together. That's why we get to endgame with confidence. That's why we'll continue to be here for our policyholders.

PHYSICIANS INSURANCE COMPANY

The Ugly Side of Reform

Martin A. Murcek, MD

"The rising level of discomfiture about the 'plan' among our elected representatives shows that some of them are having second thoughts as well."

This month, I want to take a look at the ugly side of the health system reform debate. I say ugly, because the story that follows is full of mean-spirited childishness, hypocrisy, name-calling, and holier-than-thou-ism.

On February 21 of this year, the *Philadelphia Inquirer* printed a letter to the editor from William S. Frankl, MD, president of the Philadelphia County Medical Society. In his letter, Dr. Frankl raised some honest and straightforward questions about the inordinate praise being lavished on the Clintons' "reform" plans by liberal commentators and reporters. Dr. Frankl pointed out that such items as the rising divorce rate, single-parent families, teen pregnancies, drug abuse, child abuse, and criminal violence are not health care issues, per se.

In the same letter, Dr. Frankl pointed out that Mrs. Clinton's claim that the "economic" side of the health care equation could be changed without affecting the patient care side was disingenuous at best. The strongest language Dr. Frankl used in his letter was the use of the word *dissembling* to describe the pronouncements of Hillary et al. vis-a-vis health system reform.

Dr. Frankl's letter stirred up a real progressive hornets' nest at the *Inquirer*. In an editorial published in that "paper" (their term, not mine), the editorialist accused Dr. Frankl of "not listening" while attending medical school and of "working himself into a lather" about issues that St. Hillary allegedly never made pronouncements upon.

The editorialist excoriated Dr. Frankl for bringing that nasty word, "choice," into the argument, claiming that choices, as they have existed in the past, are disappearing anyway. On the whole, the piece was a plain, old-fashioned, yellow-journalism smear.

Of course, as Whitewater and other presidential escapades of the Clintons' come to light, it doesn't seem very harsh to label them disingenuous. Liberal editorialists are now admitting that all is not well with their "dream team" and that maybe some tough questions ought to be asked. It's still soft-pedaling, but it's a start.

The *Inquirer* printed on March 4 a rebuttal letter from Dr. Frankl which pointed out that many other editorialists around the country had recently lodged misgivings similar to his own about the Clinton "plan." As he did in his original letter, Dr. Frankl pointed out that honest debate of the health system reform issue should not be harmful to anyone supporting such reform for honest reasons.

The issue of honesty brings us to the rub: I have said from the beginning that the health system reform issue is about money only and has nothing to do with the well-being of the citizenry at large. This fact is still being denied by the Clintons' backers, but the polls show that the public at large isn't buying it anymore. The rising level of discomfiture about the "plan" among our elected representatives shows that some of them are having second thoughts as well.

Objectivist philosopher and noted author Ayn Rand once said that it would be easy to tell when our government officials were going completely around the bend, by observing their increasing confusion over what constitutes a want as opposed to a need.

Today, people want to abuse their bodies in a wide variety of ways at no consequence to themselves: They want to smoke cigarettes, but have the pulmonary function of a marathon runner; they want to suck fat out of a bucket through a straw without worrying about obesity or heart disease; they want to consume dangerous drugs and alcohol during pregnancy without concern about the prenatal mess they are creating inside themselves. Worst of all, the government wants to make it financially painless for them to do so. These are all manifestations of Rand's wants/needs dichotomy and worthy of profound consideration.

Long after the ingrates serving as mouthpieces for the Clintons' flawed "plan" are forgotten, good doctors like Bill Frankl will still be valued by their patients who know that their physician's devotion is to the diminishment of human suffering, not the almighty dollar.

ou're on solid ground with the Dodson Plan.

More than 75 years ago, Bruce Dodson, Sr. pioneered the concept of the dividend plan for workers' compensation insurance. Dodson Group has been helping businesses like yours save on premium costs ever since.

The Dodson Plan gives you the opportunity to earn a dividend each year, depending on the claim experience of all insured members. We carefully select those who participate, creating the greatest potential for you to save.

Pennsylvania Medical Society endorsed the Dodson Plan in 1973. Since then, participating members have earned a total of **$2,309,240** in dividends. Share in the savings!

You're on solid ground with Dodson.

LETTERS TO THE EDITOR

AMA: DISCONTINUE NATHAN DAVIS AWARDS

As a Pennsylvania physician, my nominations for the 1995 Nathan Davis Awards are: state Representative Allen Kukovich (D-Westmoreland) and U.S. Congressman Fortney Pete Stark (D-California).

Since 1989, the American Medical Association (AMA) has annually presented the Nathan Davis Awards to public officials who have contributed significantly to further public health. In this short period, Senator Edward Kennedy (D-Massachusetts) (1992), Kentucky's Governor Brereton Jones (1994), and Hawaii's Director of Health John Lewin, MD (1994), have received this prestigious honor. Did these three individuals deserve this award? The answer is, No!

Dr. Lewin was chosen for his implementation of the Hawaiian State Health Insurance Program, which began in 1974. This system, contrary to its many advocates, is restrictive and repressive. Two health care carriers, Kaiser Permanante and Blue Shield, control 80 to 95 percent of the health care market. The average time a physician practices in Hawaii is six years, and the state has a greater emigration of doctors than any other. Half of all the hospitals are state owned, and Hawaii has a value-added tax. Does this illustrate that Dr. Lewin deserves the Nathan Davis Award?

Since the early 1970s, Senator Kennedy has promoted a national health care system that is socialistic in its concept. Does he merit the Nathan Davis Award?

Governor Jones pressured the Kentucky legislature to pass his health care reform bill, which included a two-percent provider tax on gross revenue that could not be passed onto the public. There would be a five-person health board that could set rates, grant medical licenses based on economic efficiency, and review patient-physician records. The law, which was enacted in 1993 before being overturned in state circuit court, also prohibited balance billing by physicians and mandated health care participation by each household. Has Governor Jones contributed much to receive the Nathan Davis Award?

Of the eight members on the AMA's Nathan Davis Awards' board, only three are AMA physicians. Of the remaining five, Howard Deets, executive director of the American Association of Retired Persons, is a member. Is he entitled to select from the nominations for the Nathan Davis Awards? When Governor Jones was confirmed, all three AMA officials voted, No!

For 1995, let us continue the present tradition, and nominate Allen Kukovich and Pete Stark for the Nathan Davis Awards! Or should the AMA discontinue these presentations?

Joseph A. Giordano, MD

AUTHOR AVAILABLE TO SPEAK ON FUTILITY

I have received a number of positive comments about PENNSYLVANIA MEDICINE's reprint of the point-counterpoint articles on futility which appeared in the February 1994 issue ["The Concept of Futility...," pages 18-29].

As follow-up, I would like to mention that one of the authors, James F. Drane, PhD, is available to talk to county medical societies and other interested groups, including hospital medical staffs or hospital ethics committees, about futility and other bioethical issues. One of his main themes is to point out in a very dynamic presentation a number of bioethical myths that the medical profession clings to.

For information, call Dr. Drane directly at (814) 732-2604 or (814) 734-1443.

John W. Mills, MD
Medical Editor

Speak Out on Managed Care

PENNSYLVANIA MEDICINE wants to hear from you about managed care.

Managed care is everywhere. How is it impacting your practice? What questions do you have about integrating your practice into the new arenas of managed care, hospital mergers, and physician networks? Are you confused? Let us know! The State Society and this publication continue to present news and views of the issues, so you know what we think! But what do you think? What are your:

- thoughts and concerns?
- suggestions for improvement?
- efforts towards improvement?
- reactions to the State Society's positions?
- reactions to our coverage of the issues?

Let us know!

New Therapeutic Agents Marketed in 1993

Daniel A. Hussar, PhD

This is the second in a series of articles overviewing new drugs marketed in the U.S. in 1993.

In 1993, the Food and Drug Administration (FDA) approved 25 new molecular entities (NMEs), 23 of which are for therapeutic use and two are diagnostic agents. Eleven of the NMEs for therapeutic use, as well a new biological agent intended for therapeutic use, were both approved and marketed in the United States in 1993. In addition, 11 other NMEs that the FDA approved before 1993 (most in late 1992) were marketed during the year. Thus, a total of 23 therapeutic agents reached the U.S. market for the first time in 1993, a considerably lower number than the 30 new therapeutic agents marketed in 1992 and the record number 31 new agents marketed in 1991. Many of the 13 therapeutic agents approved in 1993 but not marketed before the end of the year have become available in early 1994.

This review of the therapeutic agents first marketed in 1993 considers their most important properties and, when possible, compares them with other available agents with similar properties. Of the 23 new therapeutic agents, 22 are considered in this paper. The one agent not reviewed is flosequinan, which was withdrawn from the market after being available only several months because of a concern about toxicity. This discussion of new drugs focuses on the most important properties of these agents; when additional information is needed, more comprehensive references and the product literature should be consulted.

Hypnotic

Zolpidem tartrate (Ambien-Searle) is an imidazopyridine derivative that is indicated for the short-term treatment of insomnia. Although it is structurally unrelated to the benzodiazepines (e.g., triazolam [Halcion]) and other hypnotics, it binds to benzodiazepine receptors (also known as omega receptors) in the brain and shares some of the pharmacological properties of the benzodiazepines. Zolpidem is effective in inducing and maintaining sleep and, in comparative studies, it has been as effective as the benzodiazepine derivatives. The new drug has a rapid onset of action, a short half-life, and no active metabolites, and, like triazolam, is unlikely to cause residual next-day sedation.

The adverse reactions most commonly associated with the use of short-term treatment (up to 10 nights) with zolpidem in doses up to 10 mg, and seen at statistically significant differences from placebo-treated patients, include drowsiness (two percent), dizziness (one percent), and diarrhea (one percent). There has been little evidence of memory impairment, or rebound effects when therapy was discontinued, when zolpidem has been used in the recommended dosage (i.e., up to 10 mg). However, if the dosage exceeds this level, the frequency of the abovementioned effects increases, and there is also an increased risk of problems such as confusion and falls in elderly patients.

Although zolpidem is used to induce and maintain sleep, patients should be cautioned against engaging in activities requiring complete mental alertness or motor coordination, such as operating machinery or driving, after ingesting the drug (including potential impairment of the performance of such activities the following day). Patients should also be warned about the risk of additive depressant effects when other agents with central nervous system (CNS) depressant activity are used concurrently. It is recommended that the consumption of alcoholic beverages be avoided during treatment with zolpidem, as well as other hypnotics.

Problems of dependence and abuse have occurred with the benzodiazepines, and these agents are included in Schedule IV under the provisions of the Controlled Substances Act. It has been suggested that the potential for abuse of zolpidem is less than that for the benzodiazepines, particularly since high doses of zolpidem often cause nausea and vomiting. However, like the benzodiazepines, zolpidem is classified in Schedule IV, and similar precautions should be observed.

Most of the benzodiazepines are included in Pregnancy Category X, and their use during pregnancy is contraindicated. Zolpidem is included in Pregnancy Category B, and, unlike the benzodiazepines, its use is not contraindicated during pregnancy. Nevertheless, the new drug should be used during pregnancy only if clearly needed.

Because zolpidem has a rapid onset of action, it should only be taken immediately prior to going to bed. Food may delay and/or decrease absorption and, for faster sleep onset, zolpidem should not be administered with or immediately after a meal. The recommended adult dosage is 10 mg immediately before bedtime, which is also the maximum recommended dose. A lower dosage may be necessary in patients who are also taking other CNS depressants. An initial 5-mg dose is recommended in patients with hepatic insufficiency and in elderly or debilitated patients who may be especially sensitive to the effects of zolpidem.

The use of hypnotics such as zolpidem should generally be limited to a period of seven to 10 days. Reevaluation of the patient is advised if a hypnotic is to be taken for more than two to three weeks. It is recommended that zolpidem not be prescribed in quantities exceeding a one-month supply.

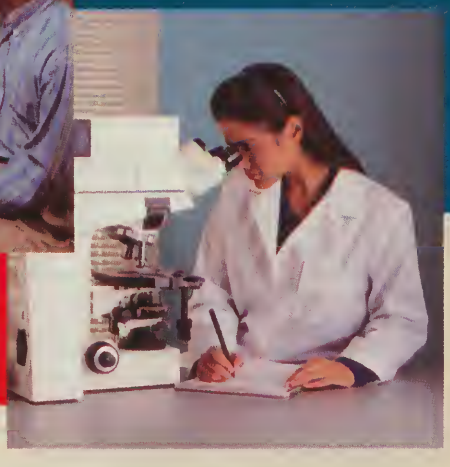
Zolpidem tartrate tablets are supplied in 5- and 10-mg potencies.

Antiepileptic agent

About 2.5 million Americans have epilepsy. Although the seizures of many patients are well controlled with medication, it is estimated that between 20 and 30 percent of patients are poorly controlled and continue to experience seizures even with the use of medication. *Felbamate* (Felbatol-Wallace) is the first new antiepileptic drug to be marketed in 15 years and is structurally related to meprobamate (Equanil, Miltown). It has a broad spectrum of anticonvulsant activity and, although the mechanism by which it exerts its activity is unknown, it may reduce seizure spread and increase seizure threshold.

The new drug has been approved for use as monotherapy and adjunctive therapy in the treatment of partial seizures with and without generalization in adults (14 years of age and above) with epilepsy. It is also indicated as adjunctive therapy in the treatment of partial and generalized seizures associated with Lennox-Gastaut syndrome in children (ages 2-14 years). Lennox-Gastaut syndrome involves multiple seizure types and occurs almost exclusively in children.

In the clinical studies, felbamate was effective in a number of patients whose seizure disorders were poorly controlled by other drugs, and it represents an important addition to the group of agents that are effective in the management of epilepsy. It also was well tolerated by most patients and appears less likely than some of the other antiepileptic drugs (e.g., phenytoin [Dilantin]) to cause neurologic/cognitive problems such as difficulty thinking clearly, memory loss, depression, or slurred speech.



THE ELI LILLY AND COMPANY HISPANIC HEALTH INITIATIVE

OUR COMMITMENT:

TO ENHANCE THE DELIVERY OF OPTIMAL HEALTH CARE TO THE HISPANIC COMMUNITY

Through our Hispanic Health Initiative, Eli Lilly and Company joins with you in committing the time, the talent, and the resources necessary to help enhance the quality of health care in the Hispanic community. As part of that commitment, Lilly makes available an array of programs and materials designed to benefit Hispanic health care.

- STUDENT PROGRAMS
  Support programs for Hispanic high school and medical school students to increase the number of Hispanics entering the health care professions
- PATIENT EDUCATION MATERIALS AND PROGRAMS
  Culturally sensitive materials in Spanish to enhance quality of care
- PHYSICIAN INFORMATION PROGRAMS
  Continuing medical education and clinical practice materials in a variety of formats, including symposia

Eli Lilly and Company
Hispanic Health Initiative™

1994 SYMPOSIA PROGRAM:

Focus on Hispanic Health

Join Hispanic opinion leaders taking a critical look at the diagnosis and treatment of three diseases of special significance in Hispanic communities: diabetes, depression and gastrointestinal disorders

WHERE AND WHEN

Miami	*April 23*
New York	*May 7*
Chicago	*May 25*
Houston	*September 10*
Anaheim	*October 22*

Ask your Eli Lilly and Company sales representative or call 1-800-233-2049 regarding symposia registration or additional information on the Hispanic Health Initiative.

©1994 ELI LILLY AND COMPANY

The adverse reactions most often reported when felbamate was used alone in adult patients in the clinical trials include anorexia, nausea, vomiting, dyspepsia, constipation, fatigue, insomnia, and headache. These effects occurred in less than 10 percent of patients, and it was seldom necessary to discontinue therapy. Because felbamate is not likely to cause serious toxicities, it is not necessary to monitor plasma concentrations since dosage is titrated to the clinical response instead of to specific ranges of plasma concentrations.

The use of felbamate in conjunction with other antiepileptic drugs must be approached with caution because of the potential for drug interactions. Felbamate causes an increase in the plasma concentrations of phenytoin, valproate (Depakene, Depakote), and the active epoxide metabolite of carbamazepine (Tegretol), although the concentration of carbamazepine itself is reduced. It is recommended that when felbamate is added to or substituted for other antiepileptic drugs, the dosage of the other agents should be reduced by 20 to 33 percent to minimize the occurrence of adverse effects. The activity of felbamate may also be changed as a result of interaction with other antiepileptic drugs. Phenytoin and carbamazepine increase the clearance and reduce the plasma concentrations of felbamate by 45 percent and 40 percent, respectively, whereas valproate is not likely to cause a clinically important change in felbamate concentrations.

In the clinical studies of felbamate, most patients received 3,600 mg/day in both monotherapy and adjunctive therapy regimens. When the treatment of a seizure disorder in an adult is to be initiated with felbamate monotherapy, the recommended starting dosage is 1,200 mg/day in divided doses three or four times a day. The dosage may then be increased in 600-mg increments every two weeks to 2,400 mg/day based on clinical response and thereafter to 3,600 mg/day if indicated. The product labeling should be consulted for dosage recommendations for adult patients treated with other antiepileptic drugs who are to be converted to felbamate monotherapy, and for patients in whom felbamate is to be used as adjunctive therapy.

Felbamate tablets are supplied in 400- and 600-mg potencies, and an oral suspension (600 mg/5 ml) is also available.

Agent for multiple sclerosis

Interferon beta-1b (Betaseron-Berlex) is an analog of human interferon beta that is produced using recombinant DNA technology. The interferons are a family of naturally occurring proteins that have been grouped in three major classes—alfa, beta, and gamma. The interferons have overlapping yet distinct biologic activities. Interferon beta-1b is the fifth interferon and the first beta interferon to be marketed in the U.S., and it exhibits both antiviral and immunoregulatory actions.

The use for which interferon beta-1b has been approved is unique, not only among the interferons but among all therapeutic agents. Although several other agents have been used in the management of the symptoms of multiple sclerosis (MS), interferon beta-1b is the first drug to be specifically approved for the treatment of MS. The new drug is indicated for use in ambulatory patients with relapsing-remitting multiple sclerosis to reduce the frequency of clinical exacerbations.

About 300,000 Americans have MS, and it most commonly strikes young adults. The specific cause is unknown, but it is thought to be an immunologically mediated disorder that results in damage to the nervous system with the potential for disability. Approximately 100,000 individuals experience the relapsing-remitting form of MS that is characterized by recurrent attacks (relapses or exacerbations) of neurologic dysfunction followed by complete or incomplete recovery (remissions). The relapses that are experienced may involve vision problems, slurred speech, muscle weakness, lack of motor coordination, and/or tremors.

In the clinical studies, interferon beta-1b reduced the frequency of MS attacks by one-third and of serious attacks by one-half, and also reduced the need for hospitalization. In addition, magnetic resonance imaging (MRI) studies showed a significant decrease in MS lesions. The beneficial results with the use of interferon beta-1b are thought to be primarily due to its immunoregulatory action, although the specific mechanism by which it acts is not known.

Interferon beta-1b represents an important breakthrough in the management of multiple sclerosis and offers hope for individuals with a disorder for which no effective treatment was previously available. However, its limitations must also be recognized. It is not a cure for MS. The percentage of patients who became more disabled was only slightly lower in the treated group than in the placebo group in the clinical studies, and some patients have not benefited from the use of the new drug. The efficacy of interferon beta-1b in the treatment of the more serious chronic-progressive form of MS has not yet been determined, and studies are currently being conducted in patients with this form of the disease.

Interferon beta-1b is administered subcutaneously, and injection site reactions (e.g., redness, pain, swelling, discoloration) were experienced by 85 percent of the patients in the clinical studies, with injection site necrosis occurring in five percent. In most patients these reactions were transient and did not require discontinuation of therapy. Patients should be advised regarding the rotation of injection sites and cautioned against administering injections into skin that is tender, red, or hard.

As with the other interferons, flu-like symptoms (fever, chills, myalgia, malaise, sweating) are common with the use of interferon beta-1b, having been experienced by about 75 percent of patients. Administering the medication at night may help lessen the impact of flu-like symptoms as may the use of acetaminophen.

Some patients in the clinical studies experienced mental disorders, including confusion, anxiety, and depression. One suicide and four attempted suicides were also reported; although it is not known whether interferon beta-1b was implicated in these actions, patients should be warned to immediately report symptoms of depression or suicidal ideation. Patients exhibiting depression should be monitored closely, and discontinuation of therapy should be considered.

Although interferon beta-1b was not observed to be teratogenic in animal studies, it exhibited an abortifacient action. It is classified in Pregnancy Category C, and patients should be advised of its abortifacient potential. If the patient becomes pregnant or plans to become pregnant while taking interferon beta-1b, it should be recommended that the patient discontinue therapy.

The recommended dosage of interferon beta-1b is 0.25 mg (8 million international units [IU]) injected subcutaneously every other day. Patients should be instructed in injection techniques to assure the safe self-administration of the drug. Sites for self-injection include the arms, abdomen, hips, and thighs. Interferon beta-1b is supplied as a lyophilized powder in vials containing 0.3 mg (9.6 million IU) of the drug. The vials should be stored in a refrigerator but should not be frozen.

At this time, the supply of interferon beta-1b falls far short of the amount needed. Following a request to physicians to "register" patients for whom they wished to prescribe the drug, more than 50,000 patients were enrolled and randomly assigned a position on the enrollment list. Berlex and Chiron (the company that is manufacturing the drug) expect to be able to supply 25,000-40,000 patients by the end of 1994, and

over 100,000 patients by the end of 1995. Interferon beta-1b is distributed through a network of pharmacies participating in the PCS Biotech Network administered by PCS Health Systems.

Agent for Alzheimer's disease

Tacrine hydrochloride (Cognex-Parke-Davis), also known as tetrahydroaminoacridine or THA, is the first drug to be approved for the treatment of Alzheimer's disease. Characterized by a progressive decline in memory, judgment, the ability to reason, and intellectual function, Alzheimer's disease afflicts approximately four million American adults. More than 100,000 people die from this disorder each year, making it the fourth leading cause of death in adults after heart disease, cancer, and stroke.

The cause of Alzheimer's disease is not known, but it has been suggested that the symptoms are due, in part, to a deficiency of acetylcholine in the brain. Tacrine is a reversible cholinesterase inhibitor that presumably acts by elevating acetylcholine concentrations in the cerebral cortex by slowing the degradation of acetylcholine by still intact cholinergic neurons. The new drug is specifically indicated for the treatment of mild to moderate dementia of the Alzheimer's type. In the clinical studies, it was found to provide a small but clinically significant benefit in improving memory and reasoning ability.

The marketing of tacrine represents an important advance in the treatment of Alzheimer's disease; however, it is not a cure for the disorder, nor is there evidence that the drug alters the course of the underlying dementing process. Indeed, in the clinical studies with the drug, the use of the highest recommended dosage (160 mg per day) resulted in significant improvement in only about 40 percent of the patients. Nevertheless, the use of tacrine offers the potential for clinical benefit in a disorder for which no effective treatment was previously available.

The primary concern with the use of tacrine is the risk of liver toxicity. Approximately 50 percent of patients in the clinical studies experienced alanine aminotransferase (ALT) elevations above the upper limit of normal (ULN), although only one of more than 8,000 patients in the studies had documented elevated bilirubin levels (5.3 times the ULN) and jaundice with transaminase levels nearly 20 times the ULN. It is recommended that serum transaminase levels (specifically ALT) be monitored weekly for at least the first 18 weeks following initiation of tacrine treatment, after which monitoring may be decreased to every three months. Weekly monitoring should be resumed for a minimum of six weeks on each occasion that the dose of tacrine is increased. When transaminase levels rise to between three and five times the ULN, the dose of tacrine should be reduced by 40 mg/day. Dose titration can be resumed when the transaminases return to within normal limits. It is recommended that tacrine therapy be stopped if transaminase levels exceed five times the ULN.

Other commonly reported adverse reactions with the use of tacrine include gastrointestinal effects (nausea and/or vomiting [28 percent], diarrhea [16 percent], dyspepsia [nine percent], anorexia [nine percent]), which are due at least in part to the cholinergic action of the drug.

Tacrine is extensively metabolized by the cytochrome P450 enzyme system, which is also involved in the metabolism of agents such as theophylline. The concomitant use of tacrine with theophylline has increased the average plasma theophylline concentrations by about two-fold. Therefore, the monitoring of plasma theophylline concentrations and the appropriate reduction of theophylline dosage are recommended in patients taking the two drugs concurrently. Cimetidine, by inhibiting liver enzyme systems, has been reported to increase the peak serum concentration of tacrine by 54 percent. Cigarette smoking is known to increase liver enzyme activity, and the mean plasma tacrine concentrations in current smokers are approximately one-third the concentrations in nonsmokers.

Food reduces tacrine bioavailability by about 30 to 40 percent; however, there is no food effect if the drug is administered at least an hour before meals. Tacrine should be taken between meals whenever possible but, if gastrointestinal upset occurs, the drug may be taken with food to improve tolerability although a significant reduction in plasma concentrations should be expected.

The initial dosage of tacrine is 10 mg four times a day. Following six weeks of treatment, the dosage should be increased to 20 mg four times a day, providing there are no significant transaminase elevations and the patient is tolerating treatment. Patients should be titrated to higher doses (30 mg four times a day and then 40 mg four times a day) at six-week intervals on the basis of tolerance.

Capsules of tacrine hydrochloride are supplied that contain 10, 20, 30, and 40 mg of tacrine. The cost of all four potency capsules is the same so that the titration to higher dosage levels is not associated with a higher cost that would discourage patient compliance.

Antidepressant

Paroxetine hydrochloride (Paxil-Smith-Kline Beecham) is the third selective serotonin reuptake inhibitor (SSRI) to be marketed in the U.S., joining fluoxetine (Prozac) and sertraline (Zoloft). Although it is structurally unrelated to other available antidepressants, its mechanism of action and many of its properties are similar to those of the other SSRIs.

Paroxetine is indicated for the treatment of depression and, in the clinical studies of its use in patients with major depressive episodes, the new agent was generally found to be as effective as fluoxetine and imipramine (Tofranil). The use of paroxetine has also been evaluated in patients with other disorders such as obsessive-compulsive disorder, panic disorder, and diabetic neuropathy. However, these are not labeled indications at the present time.

The most commonly observed adverse reactions in the clinical trials (with an in-

Studies Consider Tacrine's Risks

CHICAGO—High doses of the Alzheimer's drug, tacrine, have been found to be safe and effective for some patients, although the potential for serious, but reversible, liver toxicity exists, according to two *JAMA* studies published April 6, 1994.

One study examined the efficacy and safety of high-dose tacrine in patients with probable Alzheimer's disease. "Patients treated with 160 mg/d of tacrine showed statistically significant and clinically observed improvements on objective cognitive tests, clinician- and caregiver-rated global evaluations, and quality of life assessments," write the authors. "A statistically significant dose-response relationship and a substantially larger treatment effect than those reported in previous studies suggest that higher doses of tacrine are more beneficial than lower doses."

In the second study, levels of ALT, an enzyme whose serum concentration increases in cases of liver injury, were measured. "Elevated ALT levels appeared to be a delayed manifestation of tacrine therapy," the authors say. "In every patient who had an ALT level greater than three times the upper limit of normal, levels returned to normal after tacrine therapy was discontinued...For most patients, the elevations in ALT level will be mild and will resolve with discontinuation of therapy or reduction in drug dose. Nonetheless, the marked interpatient differences in susceptibility make it likely that tacrine could produce life-threatening hepatotoxicity in some patients." The authors suggest careful monitoring of serum ALT levels.

cidence at least twice that for placebo) were nausea (26 percent), decreased appetite (six percent), asthenia (15 percent), somnolence (23 percent), dizziness (13 percent), insomnia (13 percent), tremor (eight percent), sweating (11 percent), and ejaculatory disturbance (13 percent). Paroxetine should not be used concomitantly with a monoamine oxidase inhibitor (MAOI) such as tranylcypromine (Parnate), or during either the 14-day period following discontinuation of treatment with a MAOI or the 14-day period preceding initiation of treatment with a MAOI. Although paroxetine has not been shown to increase the effects of alcohol, patients should be advised to avoid the consumption of alcoholic beverages while taking the new agent.

The possibility of a suicide attempt is inherent in depression, and close supervision of high-risk patients should accompany initial therapy with paroxetine. Prescriptions should be written for the smallest quantity of tablets, consistent with good patient management, to reduce the risk of overdosage.

Paroxetine is extensively metabolized in the liver. Cimetidine has been reported to inhibit its metabolism and to increase its steady-state plasma concentrations by about 50 percent, and a reduction in dosage of the antidepressant may be necessary. Conversely, phenobarbital and phenytoin (Dilantin) may increase the activity of hepatic enzyme systems, and accelerate the metabolism and reduce the activity of paroxetine, possibly necessitating an increase in dosage.

Like fluoxetine, paroxetine itself may inhibit the activity of liver enzyme systems, and its concurrent use with other medications that are metabolized by these enzymes must be closely monitored. Of the three SSRIs, sertraline appears to be the least likely to affect liver enzymes and to interact with other drugs via this mechanism.

Like sertraline, the elimination half-life of paroxetine is considerably shorter than that of fluoxetine. This can be advantageous in certain situations, such as when a SSRI is discontinued and treatment with a MAOI is to be initiated. Because of its long elimination half-life, at least a five-week interval should elapse after discontinuing fluoxetine before initiating treatment with a MAOI.

Paroxetine is administered as a single daily dose, usually in the morning to reduce the possibility of adverse reactions like insomnia. However, if a patient experiences somnolence, the drug may be taken at bedtime. For patients who experience nausea, administering paroxetine with food may minimize the potential for this effect. The usual initial dose is 20 mg/day. As with other antidepressants, the full therapeutic effect usually occurs within two to four weeks after treatment is started. In patients for whom the initial dosage does not provide an adequate response, the dosage may be increased in 10 mg/day increments to a maximum of 50 mg/day. Dosage changes should occur at intervals of at least one week.

Tablets are available in two potencies that contain paroxetine hydrochloride in an amount equivalent to 20 mg and 30 mg of paroxetine.

Anti-inflammatory agent

Oxaprozin (Daypro-Searle) is a nonsteroidal anti-inflammatory drug (NSAID) in the propionic acid derivative class, joining fenoprofen (Nalfon), flurbiprofen (Ansaid), ibuprofen (Motrin), ketoprofen (Orudis), and naproxen (Naprosyn). Like the other NSAIDs, the new agent exhibits anti-inflammatory, analgesic, and antipyretic activities. Oxaprozin is indicated for acute and long-term use in the management of osteoarthritis and rheumatoid arthritis. Its effectiveness in these disorders appears to be similar to that of aspirin and other NSAIDs.

The risks and precautions associated with the use of oxaprozin are generally similar to those for other NSAIDs. It is contraindicated in patients with the complete or partial syndrome of nasal polyps, angioedema, and bronchospastic reactivity to aspirin or other NSAIDs, because of the risk of severe asthmatic or anaphylactic reactions.

As with other NSAIDs, gastrointestinal (GI) effects, including nausea (eight percent), dyspepsia (eight percent), constipation (three to nine percent), diarrhea (three to nine percent), abdominal pain/distress, anorexia, flatulence, and vomiting (each one to three percent), are the adverse reactions most often associated with the use of oxaprozin. Any NSAID must be used with caution, if at all, in patients with a history of a serious GI disorder.

Drugs that inhibit prostaglandin synthesis may cause harm to a fetus, and it is recommended that the use of oxaprozin during late pregnancy be avoided. The concurrent use of oxaprozin and aspirin is not recommended because oxaprozin displaces salicylates from plasma protein binding sites and increases the risk of salicylate toxicity.

Oxaprozin has a duration of action that is long enough to enable once-daily administration. Although most patients do not experience adverse reactions when oxaprozin is administered once a day, divided doses may be tried in patients who are unable to tolerate larger single doses.

The usual dosage of oxaprozin in the treatment of rheumatoid arthritis and moderate to severe osteoarthritis is 1,200 mg once a day. In patients with milder osteoarthritis or who are of low body weight, an initial dosage of 600 mg once a day may be appropriate. Doses higher than 1,200 mg/day should be reserved for patients who weigh more than 50 kg, have normal renal and hepatic function, are at low risk of developing a peptic ulcer, and whose severity of disease justifies the higher dosage. The maximum recommended total daily dose is 1,800 mg, or 26 mg/kg, whichever is lower, administered in divided doses. Because of the long half-life of oxaprozin, it takes several days of therapy to reach steady state and for the full effects of the drug to develop. For a faster onset of action, an 1,800-mg loading dose can be given.

Oxaprozin caplets are supplied in a 600-mg potency.

Agent for migraine

Approximately 23 million adult Americans suffer from migraine, and almost one-half of these individuals suffer moderate to severe disability as a result of these headache attacks. The treatment of acute migraine has primarily involved the use of analgesics (aspirin, acetaminophen), NSAIDs (e.g., ibuprofen, naproxen), ergotamine tartrate or dihydroergotamine (DHE-45), or combination products containing isometheptene mucate (Midrin). However, for many migraine sufferers, these agents have not provided adequate relief from the headache attacks and/or have caused significant adverse reactions. It is for these reasons that the marketing of *sumatriptan succinate* (Imitrex-Cerenex) has been greeted with such great expectations and publicity.

Sumatriptan is chemically related to serotonin, also known as 5-hydroxytryptamine or 5-HT. Although the pathophysiology of migraine is still incompletely understood, there is considerable evidence that serotonin is involved, and the specific role of this neurotransmitter is the subject of continuing studies. There are four main types of 5-HT receptors and within each type are distinct subtypes. It is thought that certain intracranial blood vessels are dilated during a migraine attack and that 5-HT_1 receptors can mediate vasoconstriction of these vessels. Sumatriptan is a selective 5-HT_1 receptor agonist and exerts its antimigraine effect by activating these receptors and causing vasoconstriction. Because sumatriptan selectively acts at 5-HT_1 receptors and does not have a significant affinity for other receptors, it appears less likely to cause certain of the adverse reactions associated with the ergot derivatives.

Sumatriptan is indicated for the acute treatment of migraine attacks with or without aura and is administered by subcutaneous injection. Following injection, the onset of pain relief is rapid, often beginning within 10 minutes. In two controlled clinical trials involving more than 1,100 patients with moderate to severe migraine pain, headache relief (as evidenced by a reduction in pain from severe or moderately severe to mild or no headache) was achieved in 70 percent of patients within one hour of injection of a 6-mg dose, and in 82 percent of patients within two hours. The drug also relieved the nausea, vomiting, photophobia, and phonophobia (sound sensitivity) associated with migraine attacks. Although studies which directly compare sumatriptan and other agents are limited, for many patients the new agent has been more effective and/or better tolerated than other treatments for migraine, and it represents an important addition to the small group of agents that may be used for the management of acute migraine attacks.

Sumatriptan may also be effective in the treatment of cluster headache, a problem for which other medications are often ineffective. However, additional studies are needed, and this is not a labeled indication for the drug at this time.

The adverse reactions most often associated with the use of sumatriptan include pain or redness at the injection site (59 percent); atypical sensations (e.g., sensations of warmth [11 percent], tingling or paresthesia [14 percent], pressure [seven percent], burning [eight percent], numbness [five percent], tightness [five percent], all of which may be localized or generalized); dizziness (12 percent); and chest discomfort (i.e., pressure, tightness, or pain [five percent]). All of these reactions are usually transient although they may be severe in some patients.

Although serious coronary events following sumatriptan injection are rare, the drug has the potential to cause coronary vasospasm and should not be given to patients with ischemic heart disease (angina pectoris, history of myocardial infarction, or documented silent ischemia), patients with Prinzmetal's angina, or patients with signs or symptoms consistent with ischemic heart disease. It is recommended that ergotamine and sumatriptan not be used within 24 hours of each other, because ergot-containing drugs have been reported to cause prolonged vasospastic reactions and because of the possibility that this action may be additive to that of sumatriptan.

Sumatriptan is administered by subcutaneous injection in the lateral thigh or deltoid area of the arm. The recommended adult dose of sumatriptan is 6 mg. Most patients experience headache relief following the initial injection but, in some studies, about 40 percent had a recurrence of headache within 24 hours. This might be explained by the short duration of action of the drug. In these situations a second 6-mg injection may be administered, at least one hour after the first injection. The maximum recommended dose that may be given in a 24-hour period is two 6-mg injections.

Imitrex injection is supplied in a solution for subcutaneous injection that contains 6 mg of sumatriptan (base) as the succinate salt in each 0.5 ml. The available formulations include 6-mg single-dose vials; unit-of-use syringes in cartons of two syringes; and an Imitrex SELFdose system kit that contains two unit-of-use syringes, one Imitrex SELFdose unit, and instructions for use. In addition to the written instructions, a videotape which demonstrates the use of the auto-injector unit is available to facilitate patient understanding of the injection technique.

A tablet dosage form of sumatriptan is available in certain other countries, but has not yet been approved for marketing in the U.S. When administered orally, sumatriptan has a slower onset of action and may be less effective than when it is administered subcutaneously.

Dr. Hussar is Remington professor of pharmacy at the Philadelphia College of Pharmacy and Science.

YOCON®
YOHIMBINE HCl

Description: Yohimbine is a 3a-15a-20B-17a-hydroxy Yohimbine-16a-carboxylic acid methyl ester. The alkaloid is found in Rubaceae and related trees. Also in Rauwolfia Serpentina (L) Benth. Yohimbine is an indolalkylamine alkaloid with chemical similarity to reserpine. It is a crystalline powder, odorless. Each compressed tablet contains (1/12 gr.) 5.4 mg of Yohimbine Hydrochloride.

Action: Yohimbine blocks presynaptic alpha-2 adrenergic receptors. Its action on peripheral blood vessels resembles that of reserpine, though it is weaker and of short duration. Yohimbine's peripheral autonomic nervous system effect is to increase parasympathetic (cholinergic) and decrease sympathetic (adrenergic) activity. It is to be noted that in male sexual performance, erection is linked to cholinergic activity and to alpha-2 adrenergic blockade which may theoretically result in increased penile inflow, decreased penile outflow or both.

Yohimbine exerts a stimulating action on the mood and may increase anxiety. Such actions have not been adequately studied or related to dosage although they appear to require high doses of the drug. Yohimbine has a mild anti-diuretic action, probably via stimulation of hypothalmic centers and release of posterior pituitary hormone.

Reportedly, Yohimbine exerts no significant influence on cardiac stimulation and other effects mediated by B-adrenergic receptors, its effect on blood pressure, if any, would be to lower it; however no adequate studies are at hand to quantitate this effect in terms of Yohimbine dosage.

Indications: Yocon® is indicated as a sympathicolytic and mydriatic. It may have activity as an aphrodisiac.

Contraindications: Renal diseases, and patient's sensitive to the drug. In view of the limited and inadequate information at hand, no precise tabulation can be offered of additional contraindications.

Warning: Generally, this drug is not proposed for use in females and certainly must not be used during pregnancy. Neither is this drug proposed for use in pediatric, geriatric or cardio-renal patients with gastric or duodenal ulcer history. Nor should it be used in conjunction with mood-modifying drugs such as antidepressants, or in psychiatric patients in general.

Adverse Reactions: Yohimbine readily penetrates the (CNS) and produces a complex pattern of responses in lower doses than required to produce peripheral a-adrenergic blockade. These include, anti-diuresis, a general picture of central excitation including elevation of blood pressure and heart rate, increased motor activity, irritability and tremor. Sweating, nausea and vomiting are common after parenteral administration of the drug.[1,2] Also dizziness, headache, skin flushing reported when used orally.[1,3]

Dosage and Administration: Experimental dosage reported in treatment of erectile impotence.[1,3,4] 1 tablet (5.4 mg) 3 times a day, to adult males taken orally. Occasional side effects reported with this dosage are nausea, dizziness or nervousness. In the event of side effects dosage to be reduced to ½ tablet 3 times a day, followed by gradual increases to 1 tablet 3 times a day. Reported therapy not more than 10 weeks.[3]

How Supplied: Oral tablets of Yocon® 1/12 gr. 5.4 mg in bottles of 100's NDC 53159-001-01 and 1000's NDC 53159-001-10.

Cancer Pain Guidelines Designed to Change Attitudes

J. Jarrett Clinton, MD, MPH

Millions of Americans suffer needlessly from the pain associated with cancer—both from growth of the tumor or tumors within the body, and from various treatment procedures, such as chemotherapy and surgery, to control the cancer. A clinical practice guideline released in March by the Agency for Health Care Policy and Research says most suffering could be avoided if cancer pain were treated more aggressively.

The Agency for Health Care Policy and Research (AHCPR) expects its newest practice guideline on controlling cancer pain will be useful to practitioners working closely with cancer patients. More than eight million Americans today live with cancer or have had cancer; another 1.2 million cases will be diagnosed this year.

The clinical practice guideline can be implemented by health care professionals at a community hospital, a nursing home, or in a family practice as easily as it can by a team of oncologists at a major research center, according to Barbara S. Shapiro, MD , assistant professor of pediatrics, University of Pennsylvania School of Medicine, who helped draft the document.

She and other panel members—drawn from diverse backgrounds, including oncologists, anesthesiologists, neurologists, family practitioners, surgeons, psychiatrists, psychologists, religious leaders, and cancer patients—spent more than two years examining 9,600 published sources and consulting 500 other pain experts before writing the guideline.

Before being released, guidelines are peer-reviewed and pilot tested. This is the ninth of 10 guidelines AHCPR, a component of the U.S. Public Health Service, has published since 1992.

Dr. Clinton is administrator, Agency for Health Care Policy and Research, Bethesda, Maryland.

Cancer guideline findings

The new AHCPR-supported guideline challenges several assumptions that have hindered effective pain control. The most pervasive is the unfounded belief that giving patients opioid drugs used to fight pain leads to addiction. This assumption is especially strong when treating minorities, who are wrongly suspected of being more susceptible to addiction. Another assumption is that children and the elderly are less sensitive to pain than other age groups.

Patients' attitudes toward pain have also hindered their own comfort. The guideline shows that patients often believe that reporting pain is a sign of weakness, that experiencing pain—even severe pain—is an inevitable result of cancer, that pain medications taken too soon in the treatment process will not work later when pain is more severe, and that reporting pain to a practitioner will prompt him or her to treat the pain and neglect the cancer that causes it.

The guideline recommends that practitioners provide patients with easy-to-use diagrams of the body on which they can point to areas where pain occurs. It also includes a vocabulary of pain terms to describe the various types of pain, such as burning or stinging, that can occur with cancer and its treatment forms.

A major step forward is the recommendation that hospitals, nursing homes, and other facilities form interdisciplinary pain management teams to develop pain management protocols, formulate individual pain management plans, and educate patients and their families about pain and how to relieve it.

Fox Chase Cancer Society

Adapting guidelines to a local setting is an effective method of implementation. Although AHCPR-sponsored guidelines are science-based and prepared by a multidisciplinary panel of experts, they are flexible documents that make allowance for legitimate differences of clinical opinion.

An overriding strength of the AHCPR-supported guidelines is the effect of the input of physicians, as panel members. Michael H. Levy, MD, PhD, director of the Pain Management Center at Fox Chase

Cancer Center, Philadelphia, is among those recognizing that the key to implementing guidelines from any source is to include practitioners in their preparation.

Dr. Levy and Gerald E. Hanks, MD, chairman of radiation therapy at Fox Chase, peer-reviewed an early draft of the guideline more than a year ago. Panel members spent two-and-a-half years preparing the guideline, starting with a comprehensive review of the professional literature and a thorough analysis of the most reliable scientific articles. Panel members applied their expert knowledge to the draft document, then submitted it to appropriate centers for peer review.

Dr. Levy distributed the draft version to nurses, radiology oncologists, social workers, pharmacists, and others, and solicited their comments. Based on those comments and on their experiences at Fox Chase, Drs. Levy and Hanks suggested several revisions that were incorporated into the guidelines.

Children's Hospital of Philadelphia

Health care professionals, and the physician community in particular, are committed to relieving the pain that patients experience from their illness and from invasive treatments that might be needed for that condition. Despite that commitment, too often studies and clinical experience show patients still experience discomfort.

In a study by J. Bonica cited in the AHCPR-supported cancer pain guideline, nearly 75 percent of patients with advanced cancer have pain. Half of those patients experiencing pain say it is moderate to severe, and one of every four patients who experience pain describe it as being very severe.

Ironically, as Dr. Shapiro notes, the prevalence of pain can actually slip through the diagnosis as health care providers, anxious to treat the condition that led the patient to seek help, rely more heavily on advanced technology and a biomedical model of treatment, losing touch with the human dimension of the frightened patient.

Dr. Shapiro, who also serves as associate director of pain service at Children's Hospital of Philadelphia said that medical practitioners, instead of seeing their patients as individuals, too often refer to them by condition, as "the breast cancer in Room 202"—just one more stop in a busy practitioner's crowded schedule.

The AHCPR-supported cancer pain guideline can be implemented, but may need review by state regulatory agencies that now have jurisdiction over the dispersement of opioid prescriptions. The guideline cites studies showing that the properly administered use of opioids in the treatment of cancer pain is appropriate.

Currently, many practitioners and patients carry beliefs about the addictive nature of these natural pain killers that are not correct.

The guideline as resource

William Breitbart, MD, a panel member and psycho-oncologist, said he uses the AHCPR-supported guideline as a teaching tool at Cornell University Medical College, where he teaches psychiatry. Dr. Breitbart also directs a continuing quality improvement program at Memorial Sloan-Kettering Cancer Center in New York City that is partially financed through a grant from the National Cancer Institute. The quality improvement program, which is repeated →

Pain Management Strategies: A Hierarchy

Consultants' estimates of prevalence of use of progressively more invasive therapies

- Nerve blocks, palliative surgery, and ablative surgery, 1–5%.[1]
- Epidural and intrathecal analgesics, 2–6%.[2]
- Intravenous and subcutaneous drugs, 5–20%.[3]
- Oral, transdermal, and rectal drugs, 75–85%.[4]

2. Hiraga, Mizuguchi, and Takeda, 1991; Ventafridda, Caraceni, and Gamba, 1990.
3. Keller, 1984; Paice, 1993; Portenoy, 1993.
4. Goisis, Gorini, Ratti, et al., 1989; Hiraga, Mizuguchi, and Takeda, 1991; Scug, Zech, and Dörr, 1990; Takeda, 1986; Ventafridda, Caraceni, and Gamba, 1990; Walker, Hoskin, Hanks, et al., 1988.

Note: The pyramid depicts a hierarchy of pain management strategies from least invasive (at the base) to most invasive (at the apex). Therapies depicted on the ribbon may benefit many patients who are receiving concurrent treatments at any level of invasiveness. Estimates presented in this sidebar are based on published data and consultants' estimates for various clinical populations in industrialized nations, but may not reflect all settings and do not necessarily reflect what is optimal.

in other institutions across the country, identifies the health professional at the community level—whether a nurse, oncologist, anesthesiologist, or other is responsible for teaching pain management techniques at their home institution. Those professionals are invited to the cancer center to observe its pain management program, use its resource center and library, and continue a mentoring relationship in which the professional staff help them design symposia, conduct research, or perform other outreach activity.

Until the cancer pain guideline was published, Dr. Breitbart said he used the AHCPR-sponsored acute pain management guideline, developed by many of the same panel members, as a resource.

Box 8547, Silver Spring, MD 20907. The quick reference guide, patient guide, and a five-page overview of the guideline are also available from AHCPR Instant Fax. Call (301) 594-2800 from a telephone-equipped facsimile machine.

Conclusion

Perhaps no factor is more important in creating improvements to the health care system than developing more reliable information on the best ways to manage specific diseases and conditions. AHCPR works toward that end by sponsoring the development of guidelines. As medical knowledge advances and new technologies are developed, the guidelines are updated. ○

Practice Parameters: Key To Future Reform

The medical profession has a long history of leadership in a wide array of activities to ensure quality, appropriate, and necessary medical care. With strong empirical evidence indicating the use of practice parameters can improve the quality of medical care and facilitate appropriate utilization of health care services, the American Medical Association (AMA), in conjunction with numerous medical specialty and state medical societies, the federal government, and other groups, is actively involved in the development, evaluation, dissemination, and implementation of practice parameters. Increasingly, physician and nonphysician organizations are working cooperatively in the rapidly evolving practice parameters arena.

Overview of activities

Consistent with its broad commitment to promote quality medical care, in 1989 the AMA established two working groups of national medical specialty and state medical societies to address the development of practice parameters by physician organizations.

The *Practice Parameters Partnership* is a cooperative activity created to guide and coordinate the activities of the medical profession in the development, evaluation, dissemination, and implementation of practice parameters. Members include the AMA, 14 national medical specialty societies, the Agency for Health Care Policy and Research, the American Hospital Association, and the Joint Commission on Accreditation of Healthcare Organizations.

Since its establishment, the partnership has been responsible for the adoption and implementation of numerous resolutions that have advanced the development, evaluation, dissemination, and appropriate implementation of scientifically sound, clinically relevant parameters.

The *Practice Parameters Forum* provides the scientific expertise and broad-based clinical representation necessary to ensure the development of scientifically sound, clinically relevant practice parameters and the conduct of valid and reliable outcomes studies. The forum has active participants from more than 80 medical specialty and state medical societies and other interested organizations.

Development

Since 1989, when the AMA first published its *Directory of Practice Parameters,* which identified more than 700 parameters, almost 1,500 practice parameters developed by more than 45 physician organizations and other groups have been identified.

In addition, there are more than 200 practice parameters currently under development by physician organizations and other groups.

Benefits

As illustrated by the following example, both physicians and patients have benefited from the development and implementation of practice parameters:

- Practice parameters for performance of cesarean section (C-section) have resulted in a decrease in C-section rates, with no increase in fetal or maternal morbidity or mortality.
- Practice parameters on proper timing of prophylactic antibiotic administration have been correlated with a 50 percent decline in incidence of deep postoperative wound infections.
- Practice parameters for monitoring patients during general anesthesia have resulted in a marked reduction in the incidence of hypoxic injuries.
- Practice parameters for cardiac pacemakers have resulted in a significant decline in pacemaker utilization rates.
- Practice parameters for transfer of cardiac patients from coronary care units (CCUs) have improved the utilization of CCUs.

Conclusion

There is growing recognition that practice parameters provide a promising mechanism to rationalize clinical practice. At both the federal and the state level, practice parameters and related quality assurance mechanisms are key elements of legislative proposals to reform the health care system. Practice parameters are perceived as an effective mechanism to improve quality and enhance the value of health care services.

Q&A: CLINICAL LAB OVERPAYMENTS

The State Society, working closely with the American Medical Association (AMA) has saved Pennsylvania physicians nearly $3 million in refunds demanded as a result of a payment error by Pennsylvania Blue Shield (PBS). The Society had been negotiating with PBS and the Health Care Financing Administration (HCFA) since it first learned of the Medicare clinical lab overpayment refund by PBS last August.

The Society, the AMA, and other states involved in the issue have also been working to minimize hassles in the appeals process, and the carrier handling that process has agreed to pursue joint representation of physicians for the "at fault" issue.

As information, the Society's Office of General Counsel has prepared the following questions and answers to inform affected physicians of their options and explain the Society's role. Direct any other questions to Susan M. Weber, Esq., in the Society's legal department, at (800) 228-7823 or (717) 558-7750, ext. 492.

How did the clinical lab repayment issue arise?

Pennsylvania Blue Shield, as the Medicare Carrier for this region, demanded repayment from almost 1,500 physician labs for what Blue Shield characterized as "overpayments." Blue Shield had failed to follow HCFA payment policies and had overpaid labs for certain organ panels. Physicians were outraged by the tone of the Blue Shield letter and by the demand itself. That led to a series of meetings between the Society and Blue Shield, and the Society and HCFA.

The net result was that HCFA forgave two-thirds of the overpayment amounts and eliminated more than three-fourths of the physicians from the repayment pool. Out of 1,451 physicians who allegedly owed $4,150,922 in overpayments, State Society efforts were successful in netting a reduction to 343 physicians who owe $1,384,386, as well as other concessions, such as installment arrangements for repayment and a partial waiver of interest.

How are payment disputes like this usually handled?

Normally, payment disputes are settled through an administrative process involving several levels of appeals through the carrier and HCFA, and ultimately they may reach the courts. HCFA agreed to concede two-thirds of the argument before we even reached the initial appeal level with the carrier.

What is the State Society doing to help physicians at these administrative hearings?

To the extent possible, the State Society is representing the interests of the physician group as a whole. Some physicians wanted the Society to handle the case in the name of the Pennsylvania Medical Society; we could not do so because of legal barriers that would be difficult to overcome. Other physicians suggested that the Society file a class action lawsuit. Unfortunately, administrative practice before a governmental agency such as HCFA does not include the prerogative of filing a lawsuit in the initial stages.

According to federal laws and regulations, the various appeal stages within the agency itself are prerequisites to the filing of a lawsuit in court. Generally, the appeals would be centered within the carrier who is responsible for this region. Because of PBS's involvement in this case, the Society argued to HCFA that PBS should not be the carrier under which appeals would be heard and urged HCFA to appoint a neutral carrier. HCFA agreed that Blue Cross-Blue Shield of Maryland (Md. BS) would hear the appeals. Md. BS has agreed to use a type of "consolidation" for the issues common to most of the physicians involved.

How will this consolidation work?

Because physicians from several states and the District of Columbia are involved, the AMA has retained outside counsel, the law firm of Sidley and Austin, to represent those physicians who wish to pursue their appeals through the group. This method of appeal has practical advantages, such as decreasing the total number of cases argued before the hearing officer, thereby increasing cost and time efficiencies. However, the common appeal process may not be appropriate for every physician.

What issues are common to most physicians involved?

The one issue that will be pursued through the consolidated appeal process is the position that the alleged overpayments were caused solely by PBS error. Therefore, physicians are not "at fault," and no repayment from physicians should be required. While we believe that this issue universally applies to physicians involved, some physicians may have other issues which they wish to raise. In that case, those with other issues, such as errors in calculation of the claim amounts, may wish to pursue their claims independently through personal counsel.

What are some other approaches to appeal through the carrier?

In addition to joint appeal of the "at fault" issue, and individual appeal through personal counsel, physicians may choose to file a "paper" appeal, one which is based strictly on information and arguments submitted on paper. The State Society has an affidavit and brief, prepared by Sidley and Austin, which may be used for this purpose.

What time frame should we be concerned with?

An appeal may be filed any time within six months after the date of the demand letter sent by PBS. However, physicians who would like to join in the consolidated appeal process should contact the Society's legal department as soon as possible, so that the group represented through the AMA can be identified.

Representatives from the State Society, the AMA, and other state societies were scheduled to meet with the Md. BS hearing officer on April 25 to determine an appropriate procedural approach. More information will be available from the Society's legal department as the appeals process develops.

Kenneth B. Jones, Esq., the Society's general counsel, and Susan M. Weber, Esq., assistant general counsel, contributed to this page.

Society Kicks Off Capitol Contacts Program

The State Society's Governmental Affairs Division in mid-March kicked off its Capitol Contacts Program to strengthen its grassroots lobbying efforts. The new program replaces the Society's Key Contact and LAT Team programs.

The move to the Capitol Contacts Program is the result of the Council on Governmental Relations' actions following a recommendation of a task force on grassroots lobbying, established by county medical society executives. The council and the county task force carefully studied the issue earlier this year and used their results as the basis for the new program.

According to Lawrence Altaker, MD, vice chairman of the council and program chairman, "Our goal is to get as many physicians and spouses as possible involved in grassroots lobbying, and to encourage them to develop contacts with their legislators."

Contacts will be kept up-to-date on legislative developments through mailings and Society publications, and, as needed, will be asked to talk with their legislators about specific issues. To accomplish this, they will need to develop good relationships with their legislators and become responsive to legislators' needs whenever medical questions arise—to become their "medical expert."

To help them in their efforts, the Society will supply each enrollee with a newly developed welcome packet containing program information and educational materials, including:

- a Capitol Contact manual, entitled "Making the Connection";
- a legislative directory;
- a complete list of Senate and House committees monitored by the Society; and
- pre-printed tracking forms to be completed and sent to the Society following legislative contacts.

"Calls to Action"—like those issued under the previous programs—will be used to educate participants and county medical society executives about specific legislative issues, and suggest action. The Society is also considering establishing a fax network to alert contacts of sudden legislative efforts or quickly scheduled committee meetings, and an 800-number hotline or document retrieval service for contacts to access the latest information on specific legislative issues.

Society lobbyists believe the most important change, from the former program to the new, is the use of a database to target contact groups according to specialty, region, or issue. For example, in the past the Society would "call" *all* key contacts to action; on any particular targetted issue before the House Health and Welfare Committee, committee members might receive hundreds of letters from key contacts statewide. Under the new program, 30 or 40 contacts acquainted with committee members might be asked to write letters supporting the Society's position.

Dr. Altaker explains: "It's been our experience that legislators prefer to hear from their own constituents regarding issues that are important to them, as well as possible actions and solutions. Thus, we believe *streamlining* our message will prove more efficient and effective."

The Society anticipates these changes will encourage more physicians to become involved in grassroots lobbying efforts; the overall program is designed to steer those physicians in the right direction.

Solicitation for the program began in March and will continue in "waves." Dr. Altaker says he is encouraged by the initial response—more than 250 enrollments in the first few weeks following solicitation—and hopes to build on that.

For more information about the Capitol Contacts Program, call the Society at (800) 228-7823 or (717) 558-7750.

New Legislation

Senate Bill 1525, "Any Willing Provider"

Senator Raphael J. Musto (D-Luzerne) has introduced Senate Bill 1525, which requires an HMO to accept "any willing provider" who meets quality standards. The bill has been referred to the Senate Public Health and Welfare Committee; consideration is expected in the near future as part of health system reform.

House Bill 2456, HIV Testing

Representative Tom Stish (D-Luzerne) has introduced House Bill 2456, which authorizes physicians to test any patient for HIV on the basis of clinical judgment and requires reporting HIV "as any other communicable disease." The bill has been referred to the House Health and Welfare Committee.

PROVIDERS REMINDED TO MAINTAIN TAIL COVERAGE

A recent letter from the director of the state's Medical Professional Liability Catastrophe Loss Fund (CAT Fund) reminds providers that state law requires physicians to maintain "tail coverage" as part of their CAT Fund participation.

The purchase of tail coverage after the termination of a claims-made policy and the payment of the surcharge are mandatory insurance requirements of the Health Care Services Malpractice Act of 1975 (Act 111).

According to the CAT Fund, failure to satisfy this obligation will require the fund to disclaim coverage for all claims reported subsequent to the termination of the policy, and to notify state licensing authorities of a health care provider's non-compliance with Act 111. This may result in license suspension or revocation in Pennsylvania.

For further information, call the CAT Fund at (717) 783-3770.

At The P·I·E Mutual, doctors rule. They sit on managing boards that consider new applicants. They form committees that review the merits of claims. Who knows better? And who cares more about controlling costs than people who themselves are paying premiums? Which helps explain why we can offer such attractive discounts to loss-free members. And how we've attracted 17,000 doctors, and become one of the largest medical professional liability monoline insurance companies in America.
Call 1-800-228-2335 for information.

ACTIONS OF THE BOARD OF TRUSTEES, MARCH 9, 1994

BOARD APPROVES INCORPORATION OF NEW SUBSIDIARY

The State Society's Board of Trustees at its March meeting formally approved the mission statement and filing of articles of incorporation of a new for-profit subsidiary, PennMed Member Services Company (PMSCO), to provide practical, physician-directed consulting and practice management services to physicians. The action follows extended study by the board.

Mission

PMSCO's mission is to advocate physician interests by initially providing: 1) consultative services for the establishment and management of physician-controlled multispecialty networks and related entities; and 2) appropriate support services and products. This includes the development of physician-led and, preferably, physician-controlled networks that could solicit and successfully negotiate contracts with health care purchasers.

As shown in the chart (below, at right), PMSCO is organizationally equivalent to the Pennsylvania Medical Society Liability Insurance Company (PMSLIC) and the Keystone Peer Review Organization (KePRO). The new subsidiary will be located at Society headquarters in Harrisburg along with existing subsidiaries, and will include two components: a management services organization (MSO) and physician services.

Range of services

For PMSCO to enable physicians to participate in the health care delivery system as the Society intends, several very sophisticated services must be provided, including three categories of consulting services under its MSO:

- *Network consulting* services will include strategic planning; business plan development; practice valuation/buy-in arrangements; capital acquisition; linking physician organizations (POs), physician-hospital organizations (PHOs), and independent practice associations (IPAs); actuarial services; and management information systems (MIS) development and evaluation.
- *Practice management consulting* services will include billing and collection consultation; general reimbursement consultation; employee benefit selection; education and training (to be done cooperatively with the State Society); risk management (to be done cooperatively with PMSLIC); group purchasing (to be done cooperatively with PMSLIC, the Society, and others); and third-party administration/claims processing consultation.
- *Data management consulting* services will include application of clinical protocols and related data analysis; utilization review data collection/consultation; application of outcomes measurement system and related data analysis; and physician/office staff education (to be done cooperatively with the State Society).

Also, PMSCO will serve as the liaison between networks and other service providers. An important extension of this function will be soliciting business from health care purchasers on behalf of physician-led integrated delivery systems.

PMSCO will also initiate and/or participate in educational symposiums and seminars that address issues related to its services, as well as in cooperative ventures with the State Society, PMSLIC, KePRO, and other subsidiaries that may be established. This effort will combine the strengths and resources of these organizations.

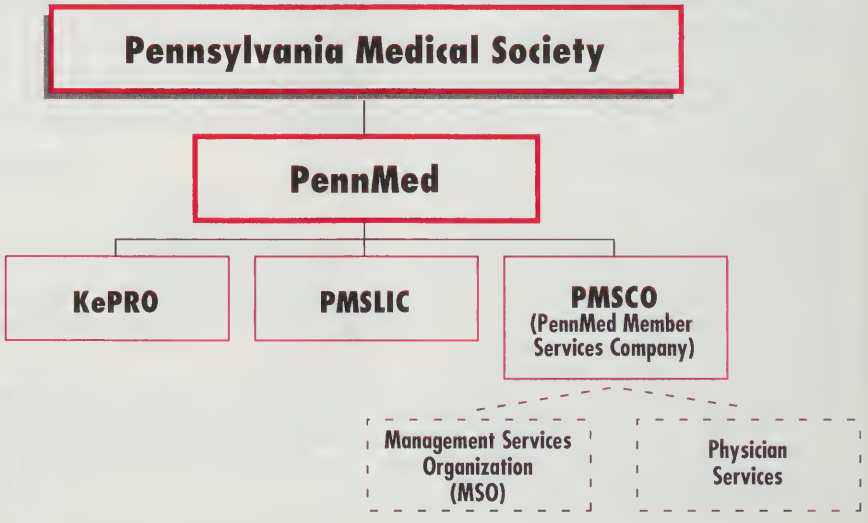
Specialty societies were represented in the development of the MSO through a special task force established by the Interspecialty Section. Continued specialty society involvement will be important for the MSO to be successful.

Once the MSO line of business is implemented, the physician services component will be developed to include some existing, as well as new, Society programs and services. Transfer of existing programs and services will occur according to guidelines determined by the board. In the meantime, the board has authorized the Council on Medical Practice to continue to manage all existing Society offerings.

PMSCO's future

In other action, the board authorized $1.2 million to capitalize and operate PMSCO though 1996. Sources of this funding include transfer of funds previously authorized for related services; solicitation of funding from specialty societies, related organizations, and individual physicians; and short-term, in-kind Society contributions in the form of temporary reallocation of selected staff and reduction, if necessary, of existing programs.

Consulting services are already available from the State Society's newest subsidiary. To inquire about PMSCO services, call the Society at (800) 228-7823.



MEDICAID PRIMARY CARE INITIATIVES REVIEWED

The board reviewed the most current information on the Department of Public Welfare's (DPW's) Primary Care Case Management Initiatives for Pennsylvania's Medical Assistance (MA) population. The three plans discussed were: HealthChoices, the Lancaster Community Health Plan, and the Family Care Network.

HealthChoices, which has been approved by the Health Care Financing Administration (HCFA), would provide more than 650,000 MA recipients in Berks, Bucks, Chester, Delaware, Montgomery, and Philadelphia counties with primary and other health care services through a network of managed care organizations (MCOs). The proposal divides the six counties into three zones and would contract with at least two MCOs to operate in each zone. Each recipient will be required to enroll in one of the offered MCOs, and primary care practitioners will deliver primary care and serve as gatekeepers for other services.

The program is expected to begin November 1, 1994. The Society—concerned about the zone divisions, physician selection criteria, and patients' lack of choice of providers—will monitor the MCO bidding process, now in progress.

The *Lancaster Community Health Plan (LCHP)* will link each participating MA recipient in Lancaster County with a source of primary medical care. Patients select the caregiver of their choice, and that caregiver is responsible for providing access to care for clients on a 24-hour basis and for making all non-emergency referrals to hospital and specialty care. Reimbursement is proposed at current rates, to be paid by DPW, plus a per patient/per month case management fee.

LCHP recently received waiver approval from HCFA and will now proceed to finalize a contract with DPW for operation of the plan. Implementation is expected by July. The Society will help promote the program statewide and continue to follow its development.

The *Family Care Network (FCN)* intends to establish a primary care case management program for MA recipients under 21 years old in the 60 counties not covered by the other two plans. Like the Philadelphia plan, FCN would attempt to link each recipient with an enrolled primary care provider. Unlike the Philadelphia plan, the recipient would have a choice of primary care providers, not of plans. The reimbursement system resembles that of the Lancaster plan.

Recruitment of providers has begun in York, Erie, Westmoreland, and Washington counties; the ultimate goal is to have the 400,000 eligible recipients in the 60 counties enrolled with a primary care provider by July 1995. The Society has participated in recruitment efforts and recommended changes and modifications to the plan, many of which have been accepted. (See the next issue of PENNSYLVANIA MEDICINE for a complete overview of these programs.)

SOCIETY SUPPORTING ANTI-TOBACCO EFFORTS

At the recommendation of the Council on Education and Science, the Society is prepared to donate $5,000 a year for four years to support an anti-tobacco grant of the Coalition for a Tobacco-Free Pennsylvania. The grant application is currently under review.

The Society is a long-standing member of the coalition, which has submitted a proposal to the Robert Wood Johnson Foundation (RWJF) for a grant under its Smokeless States Initiative. The grant would provide matching funds to any state able to develop an anti-tobacco coalition to create and implement comprehensive tobacco control programs statewide that include education, treatment, and policy initiatives. A total of eight states will be selected to receive up to $1.2 million in matching funds over four years.

The coalition asked each of its members for a financial or in-kind donation toward satisfying RWJF requirements, and the Society's board agreed to the donation, as well as providing accounting services to manage the anticipated grant and matching funds.

INCREASE PROPOSED TO CAT FUND PRIMARY LIMITS

The Catastrophe Loss Fund (CAT Fund) is supporting an increase in the malpractice insurance limits for primary insurance from $200,000 to $500,000. Total mandated insurance coverage would thus increase from $1.2 million to $1.5 million per occurrence.

CAT Fund Director Thomas P. Callahan attributes the need for an increase to inflation in the size of the average award, but stresses that the primary limits have not been raised since 1984. The Society traditionally opposes such increases since increased malpractice limits translate to increased malpractice premiums/surcharge.

Amendment of the Health Care Services Malpractice Act (Act 111 of 1975) is required to increase the limits.

PETITION ASKS FOR MORE LENIENT GUIDELINES

The Society, at the direction of the board, will petition the State Board of Nursing to modify the intravenous conscious sedation guidelines regarding the requirement for advanced cardiac life support (ACLS) training for registered nurses giving conscious sedation or monitoring patients who have received conscious sedation.

The Society proposes that the RN only be required to have basic life support (BLS) competence, if the facility where conscious sedation is given has a resuscitation team with ACLS compatibility, and the resuscitation team can be in the room where conscious sedation is being given within four minutes. BLS competence only would be required if an ACLS-certified professional (physician or nurse) is a member of the team treating the patient and is immediately available. Otherwise, the RN must have ACLS training.

The recommendation comes from the Interspecialty Section, which believes that requiring all RNs to be ACLS certified—as the guidelines currently state—is redundant, costly, and does not add to patient safety or care when a code team is available.

HOUSE TO CONSIDER NEW DUES BILLING SYSTEM

In other action in March, the board directed the Society's Committee on Bylaws to develop appropriate bylaws for consideration by the 1994 House of Delegates to implement a new dues billing system, to bill each member in the month they joined the Society.

Further, the board directed the committee to prepare appropriate bylaws language to elimiminate references to dues categories in the bylaws.

OUR AREA OF EXPERTISE

Cancer crosses all cultures and all nationalities without exception. So it stands to reason that the treatment and eventual cure of a condition experienced worldwide would require talent and intellect from around the globe.

That's why the planners of The Arthur G. James Cancer Hospital and Research Institute, a National Cancer Institute designated Comprehensive Cancer Center, set out to staff this promising medical center with the top researchers in their field, wherever they might be found. Their search resulted in a respected team of renowned specialists from all around the world.

However, this search would never have been successful without a highly attractive institution. Designed to provide the optimum environment for the development and application of effective cancer treatments, The James houses remarkable research facilities within the same building as an equally excellent treatment center. Because the organization's

Voices of the Future

Maria T. Montesano
Assistant Managing Editor

This final of three articles profiling the State Society's newly elected trustees features Joyann A. Kroser, MD, Resident Physician Section, and Stacy L. Krisher, Medical Student Section.

"The basic challenges of reform are: How do we get the most efficient care to the people who need it most, and how do we do it in such a way that both providers and patients come out winners?"

—Joyann A. Kroser, MD

The term, "the uncertainty of the future of medicine" is almost cliché with regard to health system reform; yet, it seems to be the reality of medicine's future—especially for residents and students who have chosen medicine, knowing full well that the profession they train for today could easily change tomorrow.

The State Society almost a decade ago allotted two positions on the Board of Trustees—one to the Resident Physician Section (RPS) and one to the Medical Student Section (MSS). At that time, the Society may not have realized what an important move it was, but as the reality of reform slowly approaches, these positions become even more vital—as a forum for the voices of the future.

The voice of residents

Joyann A. Kroser, MD, RPS trustee, grew up in medicine—her parents, both family practitioners, practiced out of their Philadelphia home. She says instead of watching cartoons after school, she and her siblings would "run around" the office. "In the beginning, I helped the receptionist and nurses, but eventually I worked my way up to helping my dad and mom with patients...It truly was a family practice." That childhood led her to medicine: "I couldn't picture myself doing anything else," she says.

Dr. Kroser participated in a six-year MD program offered through Lehigh University and the Medical College of Pennsylvania (MCP). She received her medical degree in 1990 and is currently completing her chief residency year in internal medicine at MCP. In July, she will begin a gastroenterology fellowship at the Hospital of the University of Pennsylvania.

One of her most interesting training experiences, she says, was serving a national health policy fellowship with the U.S. Department of Health and Human Services. She worked mostly with intradepartmental affairs and says, "Overall, the experience was an introduction to how the organization of medicine interfaces with the government. It really sparked my interest in organized medicine."

She also credits her mother, Lila, with reinforcing her interest in the Society. "My mother was a good role model to follow. She has been active in the Society for a long time, [and] participation just seemed natural for me...to express an opinion and make sure things get done." As a trustee, she represents resident interests to the board, and reports activities and decisions back to the RPS Governing Council.

One of the "hot" topics during recent Society board discussion remains health sys-

Dr. Kroser

"If you're going to change the way we deliver health care, then you also, fundamentally, must change the way we educate and train physicians."

tem reform—"a complicated issue," according to Dr. Kroser. "A sense of urgency has come up this year, which is probably accurate...The basic challenges of reform are: How do we get the most efficient care to the people who need it most, and how do we do it in such a way that both providers and patients come out winners?"

She says residents must be involved in the discussions because reform will definitely affect how they practice medicine and their long-term futures. She also believes universal access is an important reform issue for residents, since they, at this point in their training, see access problems "day in and day out," and "are keenly aware of the problems related to access."

Ms. Krisher

"Everything is changing, and what's happening now will determine our future."

Though she realizes reform will include a lot of "give-and-take," she strongly contends, "If you're going to change the way we deliver health care, then you also, fundamentally, must change the way we educate and train physicians. For instance, if we want more primary care physicians, then we must find ways to train them better and offer more incentives than just financial ones."

Still, she says, "What is most important at this point is to be involved and make residents' concerns known," a task she is not taking lightly in her trustee role.

The voice of students

Stacy L. Krisher, a Bucks County native, credits her family doctor for her decision to enter the medical field—she spent her eighth grade career day following him around his office.

A graduate of Texas A&M with a degree in bioengineering, and a second year medical student at the University of Pittsburgh, she was elected MSS trustee at the annual meeting last October.

She joined organized medicine in 1992 as a first-year medical student, and though she is not a voting member of the board, she sees her trustee position as "an opportunity to learn more about how the system works and to have some say in what medical students get out of the system." She says, "It's interesting to see what the Society does and how those actions will affect our futures."

One major student concern regarding reform, according to Krisher, is what effect health system changes will have on the doctor-patient relationship. "Will we be able to see the same patient over and over again, and actually develop a relationship?" she asks. "Or, will it be like the Medicaid system is now, where patients see whatever doctor is available at the time?"

She echoes residents' calls for universal access, as well: "Students are definitely for universal coverage. We are worried about what kind of situation we'll be working under and what quotas may be instituted." And she says students continue to worry about the debts they are incurring for medical school.

There is no crystal ball for medicine's future, which is why Krisher encourages students to become involved in the issues. "Student membership has fallen off in the past year, but this is a very important time for students to be more involved. Everything is changing, and what's happening now will determine our future."

As for her own future, Krisher is leaning towards a primary care specialty—perhaps internal or general medicine—though she says it's hard to say what type of medicine she'll be practicing down the road: "I'm trying not to limit myself. When I get into the clinical training, then I'll start narrowing down my choices."

But again she turns to the uncertainty of the future: "I don't think you ever know for sure what you want to practice before you start your clinical years; but it's especially difficult to know now, with the uncertainty of health system reform." ⬡

"[Students] are worried about what kind of situation we'll be working under and what quotas may be instituted."

—Stacy L. Krisher

Project Seeks to Bolster Immunizations

The State Society is working with the Pennsylvania Chapter of the American Academy of Pediatrics and the state Department of Health to bolster immunizations in the state through the Pennsylvania Statewide Immunization Information System Project.

The goal of the program is to develop a system that will:

- ensure the adequate vaccination of at least 90 percent of all children born on or after October 1, 1995;
- ensure the follow-up of children who miss scheduled vaccinations;
- ensure confidentiality while enabling appropriate health care providers to access a child's vaccination status;
- monitor adverse reactions to immunizing agents; and
- monitor vaccine distribution and usage.

For its part, the Pennsylvania Chapter of the Academy of Pediatrics is developing the immunization tracking program—a centralized database of children's immunization records. Funding for the program was received earlier this year through a federal grant to the state Department of Health.

The Society, as well as serving on the advisory board of the tracking project, has agreed to work with medical schools to ensure that the most current immunization practices are being taught. The thinking is: In order for the system to work, physicians must cooperate by keeping records current. While the Society will seek the least burdensome way to accomplish this, it also realizes that teaching future physicians about the immunization project will have a great impact on cooperation later on.

Our initial step will be to study what is being taught about immunizations in medical schools. Funding for our study—to be developed by the Society's Educational and Scientific Trust—is expected early next year.

Currently, the project's task force is studying similar programs in place in other states.

PHYSICIANS REMINDED OF TB REPORTING REQUIREMENT

The Centers for Disease Control and Prevention (CDC) remind Pennsylvania physicians that they are required by law to report confirmed and suspected cases of tuberculosis to the state, and that physicians not complying are subject to penalty for failure to report.

According to the Pennsylvania Department of Health TB Control Program, such cases should be reported "promptly" to your local state health center, or county or municipal health department, by completing a Case Report or calling your health center or department.

Pennsylvania currently has nine county and municipal health departments: Allegheny County Health Department, Allentown Bureau of Health, Bethlehem Bureau of Health, Bucks County Department of Health, Chester County Health Department, Erie County Department of Health, Montgomery County Health Department, Philadelphia Department of Public Health, and York City Bureau of Health.

Physicians in the counties and cities listed above should report cases of tuberculosis to these agencies. If your county or municipality is not listed, you should report to your local state health center.

The CDC also recommends:

- When a case of TB is identified as being drug resistant, it should be reported *again* to your health center or department. The report should include the results of susceptibility testing.
- TB patients who have demonstrated an inability or unwillingness to adhere to a prescribed treatment regimen should be classified as "nonadherent," and any health care professional who is aware of such a case should contact the local health center or department for necessary intervention.

Physicians are also advised that most health departments offer a number of related services to control TB in Pennsylvania such as:

- directly observed therapy, or DOT, defined at "treatment in which health care providers or other designated persons observe patients ingesting anti-TB medications";
- free medications to patients who cannot pay for them;
- diagnostic services;
- contact evaluation; and
- medical consultation.

For more information on state reporting requirements for TB, call the TB Control Program of the Pennsylvania Department of Health at (717) 787-6267. Addresses and phone numbers for local health departments and state health centers are listed in the blue pages of your telephone book.

AZT REDUCES MATERNAL TRANSMISSION OF HIV

Zidovudine (AZT) therapy has reduced by two-thirds the risk of transmission of virus from HIV-infected pregnant women to their babies, according to preliminary results of a trial sponsored by the National Institute of Allergy and Infectious Diseases (NIAID), in collaboration with related organizations worldwide.

An interim review of the study revealed a transmission rate of 8.3 percent when both mothers and their babies received AZT, in comparison with a transmission rate of 25.5 percent among those receiving a placebo.

"Although this treatment did not protect all the babies in the study, the news that the risk of HIV transmission to newborns can be significantly reduced is very promising," says Donna Shalala, secretary of the U.S. Department of Health and Human Services.

The study investigators plan to follow the infants for a number of years because the long-term

consequences of AZT therapy are unknown. Also, they will follow the women in the trial for six months after delivery. No recommendations about treatment to prevent transmission of HIV during pregnancy and delivery are being made at this time.

FDA ANNOUNCES RECALL OF LIQUID ANTIBIOTICS

The Food and Drug Administration (FDA) has announced a recall by Eli Lilly of the liquid oral antibiotics Ceclor, Lorabid, and Keflex, because several containers have been found to contain a foreign object. Consumers have been advised to stop using these products and consult a health care professional. The object—a small plastic cap found in four of the containers—could cause choking.

If a therapeutic alternative is not readily available or appropriate, patients or the physician are advised to carefully check the medicine prior to administering to ensure that it does not contain a plastic cap.

The company is recalling the products voluntarily. The FDA is investigating this matter in cooperation with other authorities. Anyone who has found a foreign object in these products should contact Eli Lilly at (800) 545-5927.

Ceclor, Lorabid, and Keflex are sold to pharmacies in powdered form and reconstituted before being dispensed to consumers. There is no known risk to patients who have completed therapy with Ceclor, Lorabid, or Keflex.

AMA OPPOSING MINORITY HEALTH IMPROVEMENT ACT

The AMA Medical Student Section (AMA-MSS) has called on its members to contact their representatives in Congress and express opposition to HR 3869, the Minority Health Improvement Act. A letter to Congress from AMA Executive Vice President James S. Todd, MD, also urges rejection of the legislation, warning that it would limit the availability of federal scholarship funds to disadvantaged students pursuing primary care specialties.

The AMA-MSS is "strongly opposed to a primary care linkage to need-based financial aid." It explains that the legislation would combine three existing scholarship programs and limit the availability of scholarship funds to disadvantaged students pursuing a primary care specialty. "Positive incentives to enter a primary care specialty should be available to all medical students regardless of their financial situation," the section says.

Dr. Todd adds, "The specter of a future corps of physicians where economic factors virtually dictate career or specialty choice is abhorrent. This virtually would assure that only those who are in a financially secure position and do not need to go into massive debt to obtain a medical education will be able to have true career choice. Students from all walks of life should have the full range of options."

AGING AFFECTS HEALTH EXPENDITURE GROWTH

Editor's Note: This is excerpted from the article, "The Effects of Population Aging on U.S. Health Expenditure Growth," which appeared on the AMA Electronic Network, April 12, 1994.

According to conventional wisdom, the aging of the U.S. population is one of the major forces behind the rapid growth of national health expenditures. This seems to be easily inferred from a number of well-known facts. The elderly consume four times the amount of medical care as those below age 65.[1] The 65 and older population has been and will continue to grow at an increasing rate, and the percentage of the population at least 75 years old will continue to increase at a rate above 30 percent per year.

Nonetheless, recent studies show that the aging of the population makes a relatively small contribution to the growth in overall health expenditures.

Newhouse considered the various factors that might have caused the growth of health expenditures of the last 50 years.[2] He estimated that aging was responsible for only about 15 percentage points of the more than 400 percent increase in real per capita expenditures that occurred between 1950 and 1987. He concluded that aging could account for only a tiny fraction of the increase in expenditure and was relatively unimportant compared with other factors, especially the growth of medical technology.

Mendelson and Schwartz estimated the contribution of population growth and aging to increases in personal health care costs over various segments of the period 1975 to 1990 and for the projection period 1990 to 2005.[3]

Their findings generally agree with those of Newhouse, indicating that the aging of the population is responsible for only a relatively small proportion of the historical increase in expenditures. In the most recent period (1985 to 1990), they estimated the contribution of aging to health care costs to be 0.33 percent per year for physician expenditures, 0.39 percent per year for hospital expenditures, 1.42 percent for nursing home expenditures, and 0.45 percent for other personal health care expenditures, compared with total annual increases in real spending of 7.0 percent for physician care, 6.1 percent for hospital care, 6.5 percent for long-term care, and 7.5 percent for other personal care.

In projecting national health care expenditures based on available research, the U.S. Congressional Budget Office summarizes the effect of demographic changes: Shifts in the size and composition of the population, including the increase in the proportion of the elderly, will add only modestly to the growth of health spending over the next decade.

Population growth alone accounts for 0.8 percentage points per year of the 9.8 percent average annual growth in personal health spending between 1992 and 2000. Although older people use a disproportionate amount of health care services, the aging character of the population adds an average increase of only about 0.5 percentage points a year to the growth of personal health spending.[4]

Population dynamics often move at a much slower pace than changes in the U.S. economy. Although the aging of the U.S. population will increase health care costs, the amount of this increase will be relatively small in comparison with the large increases forecast for health care expenditures.

However, it is important to note that long-term care expenditures are more strongly affected by population aging than are other health care categories. In addition, the contribution of aging to health expenditures will increase significantly after 2005, when the baby boom generation first comes of retirement age.

Foreign Service—Help for the Third World

Gwendolyn L. Schultz

Robert W. Ford, MD, chairman of obstetrics and gynecology at North Hills Passavant Hospital, Pittsburgh, is the impetus behind the formation of the World Health Mission, a nonprofit, non-religious organization which provides medical aid to Third World nations through donations and support of corporations, hospitals, and physicians.

Robert W. Ford, MD, had always wanted to do volunteer work abroad. Six years ago, he joined with Dr. Olu Sangodei, chief of surgery at North Hills Passavant Hospital and a native of Nigeria, to form the World Health Mission. For the past three years, they have furnished free medical assistance to an area of Nigeria plagued with poverty, disease, and limited medical technology.

The beginning

After its incorporation, the World Health Mission sought a Nigerian hospital which would invite them to come to their country. As Dr. Ford explains, "We wrote to 10 different hospitals [in Nigeria] asking if they were interested in having some Americans do some work there. We received 10 replies and decided to go to a hospital that was in between a hospital we would have in the U.S. and a 'bush hospital' where there was no electricity." They ended up in Jos University Hospital, a government teaching hospital located in the Jos Plateau in central Nigeria. Dr. Sangodei knew of the area and felt it would be appropriate for their mission.

Communicating for over a year with Dr. John Momoh, the chief medical officer at the hospital, Dr. Ford evaluated the number of personnel and type of equipment needed for their first mission. The Nigerian hospital receives government funding only for employee salaries. Dr. Ford says, "The government does not provide for any consumables such as sutures, gauze, or operating room equipment. Personnel are forced to go out into the world market, basically on their own, and purchase materials and equipment with the fees they charge patients."

The mission's first trip to Nigeria, in 1990, was to "an area we had only seen on *National Geographic*," Dr. Ford explains. Six health care professionals made the first trip: Drs. Ford and Sangodei, a radiologist, a urologist, a nurse anesthetist, and a scrub nurse. They paid their own expenses (roughly $2,000 per person) and brought donated medical equipment from local hospitals and organizations.

Upon arrival, they were informed that they were the first Americans to visit the hospital. Dr. Ford says, "In fact, the physicians there were surprised that a group would come from anywhere overseas. To this day I am sure they are amazed at how we ever found them... they are so isolated."

Since their first mission, representatives of the World Health Mission have made two more trips to Nigeria—in November 1991 and January 1993. A fourth trip, planned for early 1994, was postponed due to civil unrest in Nigeria.

Each trip lasts approximately 15 days. During that time, the team works from sunup to sundown, training physicians and residents, performing lectures, and operating on problems and confronting diseases not commonly found in the U.S., such as malaria, cerebrospinal meningitis, and pulmonary tuberculosis.

Providing for the needs

The physicians in the Jos hospital speak English and are well-trained. Before the mission's visits, the Nigerian physicians relied on physical diagnosis because they lacked the technology to do any other type of examination.

"They knew about the available equipment, but they could not afford it," Dr. Ford explains. "The machines they had were probably out of the middle '40s or early '50s...Most patients went into surgery without preoperative testing."

"There were no X-rays, CAT scans, or MRIs," he adds. "If you had a mass, pain, or abnormality picked up by physical di-

Ms. Schultz is the assistant director of marketing and development for the Society's Educational and Scientific Trust. This article is one in a series sponsored by the Trust's endeavor to address public health needs, Keystones of Public Health.

agnosis, you usually ended up in the operating room."

He says, "On our trips, we take supplies that we know they need. We take the equipment and the expert who can fill that professional expertise...Finding the machine is the easy part; the hard part is finding somebody to go with the machine."

Because it is expensive to transport the equipment to Nigeria, they must carefully decide what to take. He says the hardest part of packing, shipping, and traveling with the supplies is to not waste time and money. They only take what they need, and leave about 95 percent of their equipment and supplies with the hospital.

Since medical supplies are very expensive, the Nigerians conserve many of the materials Americans consider disposable by sterilizing them with steam. As Dr. Ford explains, "We have a country of disposables, they have a country of reusables."

He illustrates: "On our first trip, I was doing a cesarean section with a resident, and he had a one-inch rubber tube for a suction machine. But the rubber tube had no tip. There was no plastic tip, no metal tip, just the end of a rubber hose. The second trip I took three dozen plastic disposable suction tips that I'm sure they will use for the next 10 years. Just that simple little item that we would have thrown away after one case will save hundreds of lives."

Suture material is valuable to the Nigerians because it is very expensive on the open market. Dr. Ford says, "That's one of the biggest things we try to encourage hospitals to save for us—suture. For [the Nigerians] to try to purchase that, it's almost impossible. They try to conserve right down to the very end of suture. At the end of the day, I would give what suture I had left in my pocket to the resident I was working with. That's very valuable."

Helping others help themselves

Education has been a driving force behind much of the World Health Mission's activities. The goal is to train others so they may help themselves—not in a teacher/pupil relationship, but to work together as a team. Dr. Ford says, "We try to take educational materials to Nigeria. All of us have presentations that we make to their staff. After the presentations, we leave the materials for their future residents."

Dr. Ford and the World Health Mission are responsible for helping to create the hospital's first university teaching library. "Two years ago, we sent over a library of 44 different journals—five years' worth. It took eight months to get there by boat, but now they have their first university teaching library. We now have journals from 1989 to send over. As the journals are microfilmed by the hospital here, they are available to send over."

When asked if the mission has considered assisting another hospital or country, he replies, "It would be hard for me to think there is any place that needs what we do any greater than this place. We've really established a fundamental role for ourselves [in Nigeria]. We are there at their invitation, not because we are from the U.S. and think they need help."

Dr. Ford poses with Nigerian physicians outside the university hospital in Jos.

Traveling for the mission

The World Health Mission is always willing to talk to people interested in joining the organization. Although a few residents have traveled for the mission in the past, Dr. Ford stresses that physicians should have some experience in practicing medicine. "You have to be able to get by if the oxygen runs out and you're operating on a patient; you have to be able to go along with what they do—and that is pump room air in until the operation is over." He adds, "You have to be interested in helping others and be willing to use physical diagnosis in a way that we were taught in medical school, but unfortunately because of our technological world, no one appreciates anymore."

There is a sense of adventure and excitement involved because a physician must use a "sixth sense" he says. "There is no liability, there are no third parties, there are no notes to write on charts. Basically, we can go and practice medicine in the pure sense. You try your best under the circumstances, and you realize that you can't help everyone. In general, each person has to have an overall purpose and a contribution that he knows he's going to make. That takes a little time to ascertain."

Dr. Ford's contribution to the Jos University Hospital in Nigeria is unparalleled. His efforts, and the efforts of all those who have participated in the mission, have relieved many heartaches and saved numerous lives. ⬡

Loyalty or Liability?

Lorraine Gregor, CPC

While many of your employees are likely to be an asset to your practice, some "loyal" employees aren't always what they seem. This articles offers guidelines for physicians to guard against "loyalty" becoming a liability that hurts you, your staff, and your practice.

It's human nature to trust people who have been employed by us for a number of years, but does longevity necessarily equate to loyalty? Not always. What exactly does *loyal* mean? Loyalty is not just showing up for work every day or working long hours; loyalty is not just the comfortable feeling of having had someone around for a long time. In fact, in many cases these employees are really more of a liability if they're not qualified or have not grown knowledge-wise with the practice. Loyalty is doing the job an employee was *hired* and *expected* to do.

Take, for instance, the multi-physician, multi-office specialty group that had promoted their manager up through the ranks because she started the practice 25 years ago with the senior partner, or the six-physician primary care practice that had a manager who also "fell into the position" because of her length of employment. In both cases, when the entire practice was evaluated, most of the problems pointed directly to the manager—not because these managers didn't try or care or put in long hours, but because they had never been trained to handle management tasks.

In both cases, training these managers proved unproductive because they had already destroyed their credibility with the physician(s) and other staff. In some areas they were just unable to reach a higher level of understanding. They were excellent in clinical areas, but not so when it came to business. Just because someone has been with your practice for a long time or wants to be a manager doesn't mean that person should be your manager.

In fact, you may find that you know more about the business side of medicine than the person you chose to guide you through the daily maze of changing regulations, coding games, and long-term planning. This can harm your practice in ways that may not be repairable or could take years to get back on track.

Avoid the "loyalty" pitfall

Before hiring from outside or promoting from within for any position, have a clear understanding of the duties of the position. Develop a comprehensive job description that includes the scope of the position, primary and secondary duties, requirements pertaining to education and experience, or expected skill level and authority bounds. Have staff complete a task assignment sheet listing their job title; who they believe they report to; the tasks they *actually* do each day, week, and month; and the approximate time involved in completing each task. Once this is accomplished, develop a job description that meets the requirements of each position in that practice.

Remember, just because someone hands you a job description from *another* office doesn't necessarily mean you'll be able to use it in *your* office. Develop your own. Only after you have a detailed list of what you really expect from a position can you begin your search for the *right person.*

If a current employee wants the position but doesn't have the right background or overall ability to fill *all* of the outlined, expected tasks, *do not* give them the position. Decide first if you're willing to invest the time and money in having them trained. If not, you may only be hurting your employees and your practice. Possibly having to face letting someone go that was an excellent secretary or assistant, but who makes an ineffective manager or billing supervisor, can be difficult, but putting the wrong person in a position can cost a practice thousands of dollars.

Familiar stories

One specialty practice had a problem with employees who consistently manipulated the physicians. These physicians were

Ms. Gregor is manager of physician services, Delta Physician Services, a health care consulting firm located in Monroeville.

simply too nice, trusted the employees, and never reprimanded or terminated anyone. A bookkeeper in this practice refused to take a vacation and had total control of payroll, accounts payable, accounts receivable, and banking. It was discovered that this employee was stealing from the practice, not only taking cash from patient payments, but also paying some personal expenses through the practice's accounts payable system which she totally controlled. This employee had been with the practice about 14 years and was thought of as "loyal."

In another practice, an employee in charge of billing was generating claims and statements, but simply throwing them away—once again, stealing from the physicians. When confronted, this employee of almost 10 years denied she did this, even though evidence clearly pointed to this fact. She cried a lot, told the physicians she "cared about them and would do anything for the practice," and that our consultants were lying.

Against our recommendations, in neither practice were these employees terminated, because the physicians felt they were "loyal"—meaning they had been with the practices for many years. They were simply "demoted," *without* salary cuts. Both did eventually resign, but not without additional problems and added expense to the practice.

Both practices now have trackable audit controls and separation of duties with reporting mechanisms. No employee has total control of any function. The physicians also learned to read monthly reports, check activity quickly in their computers, outline expectations with their employees and accountants, and to not *blindly* trust employees, even "loyal," long-term employees.

An internal medicine practice noticed that expenses seemed to go up a great deal from one year to another, while patient loads had remained the same. In fact, with one physician temporarily off, schedules had been cut. Financial reports also revealed a changing pattern in two expense categories: In one year expenses for lab and x-ray supplies occurred every other month as they did for the first two and the last two months of the following year. However, from March through October of the second year, there were not only expenses every month, but the expensed amounts every two months were *exactly* the same. Supplies were ordered in quantities every two months, and this policy had not changed for years. Why were there expenses every month for eight months, and why were the figures exact to the penny?

Upon checking the microfilmed copies of checks, we found that the bookkeeper had written "extra" checks out to herself and her boyfriend. These physicians never reviewed the invoices. They signed checks as they were running out to the hospital. They trusted their "loyal" bookkeeper. This employee was fired. Thankfully, she was bonded, and the $80,000 found missing was covered. The physicians never pressed charges.

Amazingly, over the next 10 years, this same employee embezzled from at least nine other practices that we know about—and nobody ever pressed charges! It may be a hassle to prosecute, but what this employee did was break the law over and over again. Don't let someone do this to another of your colleagues. Remember, you might be next! Make sure all of your employees are bonded, have good audit controls, and monitor your practice monthly, and certainly quarterly, against previous years' activity.

If an employee is dishonest, terminate them immediately. Keeping them only condones their behavior and may set you up to the possibility of another employee doing the same. It's in your best interest to provide your employees with the controls that will keep them accountable. In most cases your employees will welcome guidelines and controls. It will also assure that money will be where it belongs—in your bank account. →

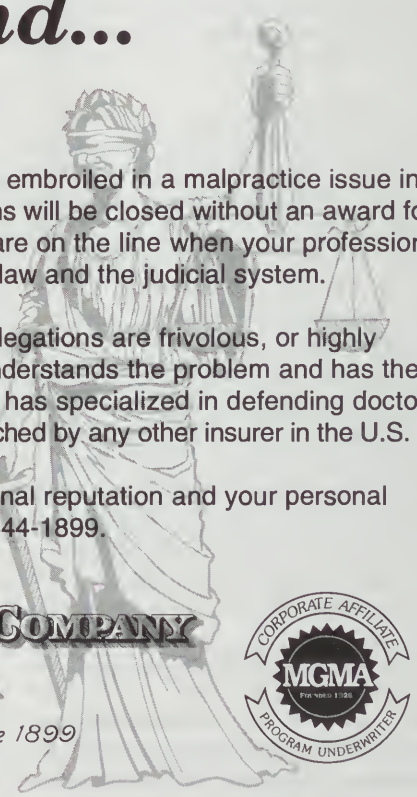
Guidelines to follow

Guard yourself against these unfortunate realities by following these easy guidelines:

- Hire qualified employees and give them a clear understanding of your expectations. Do not give an unqualified person control of your future. Pay your employees well.
- Make certain your practice has trackable audit controls set up and then followed. Have an independent audit done quarterly. This is a simple and inexpensive project. Have this done by an outside source who knows medical practice operations and billing, in addition to accounting.
- Be wary of employees who refuse to take vacations. Question managers who don't want anyone else to know how to post or do basic billing tasks, especially around payment issues.
- Learn how to look quickly at figures relating to gross charges, payments, overhead, and collection ratios. Monitor these figures weekly or at least monthly.
- Don't assume that just because an employee comes to work every day, they are doing their job. Set up goals and time frames for completing tasks. Monitor productivity. Make employees accountable and reward results.
- Avoid having "special" relationships with employees. Maintain a professional line with all employees.
- If you do have an employee who has been dishonest, don't make excuses for them. Terminate them immediately.
- Make certain your staff is continually trained and aware of changes in health care regulations, especially billing issues. Invest in educating your staff through workshops and seminars—it will ultimately help your practice be more efficient and productive.
- Be alert to managers or supervisors who always have problems but never seem to have any solutions. They may be in over their heads and taking your practice down with them.
- Pay attention today to red flags—decreased revenues, unhappy employees and patients, a manager who can't give you statistics—in your practice that may be pointing to other hidden problems. Tomorrow may be too late!

Not everyone is hiding something! It's your responsibility to give employees the tools to continue on a productive, accountable path for your practice as "loyal" employees.

...a promise to defend...



HERE ARE THE FACTS: Over 25% of America's Physicians were embroiled in a malpractice issue in the last 12 months. More than 80% of those malpractice allegations will be closed without an award for damages. Your professional reputation and your personal assets are on the line when your professional liability carrier is not both financially sound *and* experienced in the law and the judicial system.

WHEN THE ISSUES ARE LEGAL, NOT MEDICAL — when the allegations are frivolous, or highly emotional — you need a company and legal representation that understands the problem and has the experience to resolve the issue. The Medical Protective Company has specialized in defending doctors since 1899. Our legal and claims management experience is unmatched by any other insurer in the U.S.

FOR MORE INFORMATION on how we can protect your professional reputation and your personal assets, call your local Medical Protective General Agent at 1-800-344-1899.

TRACKING AND DEVELOPING PATIENT REFERRALS

As physicians vie for patient and network affiliation in today's competitive health care environment, getting the good word out about your practice becomes critical. But promoting your practice in a managed care arena involves more than just advertising in the local yellow pages. With a premium on networking, practices today need to bolster their marketing efforts by developing strong referral sources.

Referrals essentially come from three sources: patients who recommend you, professionals who refer patients to you, and plans and payer groups that promote you as a participating provider. But before developing strategies to attract new patients from these sources, you need to know where your existing referrals are and are not coming from. We suggest a referral tracking system.

A slight modification to your current registration routine will ensure that you are getting complete and accurate information for your referral tracking system. By including referral questions on your new-patient registration form, you will solicit information directly from your patients to input into your office computer system.

Each month, the data should be summarized in a report showing monthly and year-to-date totals by category. This report will clearly identify referral trends and let you know where your patients are coming from. Also, you will have a better idea of where you get the most benefit from promotional activities.

Sometimes patients are referred by multiple sources, or the source of the referral may be ambiguous. For example, a patient may have seen your yellow pages ad *and* had a neighbor's recommendation. Or, a previous patient or family patient referral may be disguised as a physician referral. A physician often directs a patient to see a specialist, but the patient may override the recommended physician and choose to be referred to you because of your good reputation or because you successfully treated a family member. Be sure the registration card begins with instructions for the patient to check off *all* items which apply.

By having better information on where your referrals are coming from, you will be able to identify your big supporters and express your appreciation. At the same time, you should be alert to the absence of certain referral sources and what you might do to cultivate new referrals.

If your referral system highlights a negative trend with a referring doctor, do not be afraid to contact the doctor and ask if there is a problem. If you are not getting patient referrals, perhaps you need to take a long, hard look at how your practice operates. Is your staff attentive and respectful toward patients? Are patients seen within a reasonable time frame? Do patients feel that you have taken the time to listen to their concerns? These perceptions all impact on whether patients will refer their family and friends to you.

Your tracking system should also pay careful attention to non-traditional referral sources, which, if cultivated properly, can be potentially good practice builders. These sources may include community or religious organizations, nurses or other ancillary providers, or pharmacists.

Physician prospecting

The best time to establish a relationship with a doctor is when he or she is just starting out in practice with no established referral pattern. Young physicians just out of training, or older ones just moving into the area, are often quite eager to get to know potential consultants to whom they can refer patients.

Personal contact with other doctors in the area, beginning with a letter and follow-up telephone call inviting them to lunch, should be a top priority for your physician referral development efforts. A "soft sell," get acquainted, see-if-we-can-be-of-service approach is usually effective.

Plan referrals

As more and more employers turn to HMOs and PPOs for health coverage, continue to ensure that your practice is participating with all plans that offer reasonable fees and terms. Beyond signing up with these plans, there are also strategies for capturing a larger share of these patients.

Primary care physicians play a key role in referrals. Specialists should identify the top 10 to 25 primary care practices within each managed care plan and send a personalized letter to each. This communication should inform the practice that you are now a participating provider and available to meet with them personally to determine how you could best serve their patients.

Plan enrollees

The enrollees of managed care plans still are able to exercise some degree of choice of doctor. As employers change plans, enrollees are forced to switch doctors more often than in the past, and for reasons that have nothing to do with quality of care. Your practice can initiate a number of marketing activities to increase the likelihood of plan enrollees choosing you for their care.

For example, many large plans produce subscriber newsletters. Contact the editors of these newsletters or the plan medical director and offer to have your practice author a special feature in each issue on your field of expertise. Also, find out which large employers are signed up with the plans in which you are participating. Many of these employers publish newsletters as well, and would be happy to receive a special guest column from a local physician participating in their plan.

Once you identify the major employers using the various health plans, you can also develop a presentation to be given over a lunch hour to employees on a relevant health concern. These types of initiatives give your practice visibility among a very targeted audience—working-aged men and women with insurance coverage. Moreover, by couching the entire thrust of your message in terms of health promotion, you dovetail with the philosophy of HMOs and the economic interest of employers—happy, healthy workers.

Referrals are essentially the life blood of your practice, and because they are so important, you need to have good information about them. A referral tracking system is an excellent way to observe trends, take corrective action if necessary, and continue doing more of the same if the trends are positive.

Fourth Scope, One Year Later

Maria T. Montesano
Assistant Managing Editor

One year after implementation of the Fourth PRO Scope of Work, the president of the Keystone Peer Review Organization talked with PENNSYLVANIA MEDICINE about the changes and challenges of the new PRO process, and the organization's future.

Just prior to implementation of the Fourth PRO Scope of Work on April 1, 1993, Donald E. Harrop, MD, president of the Keystone Peer Review Organization (KePRO) anticipated "the most dramatic change to the PRO program since its inception in 1984." One year later, he says, "KePRO is adjusting very well, and the physicians are certainly much happier."

The new focus

The Fourth Scope—designed by the Health Care Financing Administration (HCFA)—brought two major changes to the peer review process in Pennsylvania: 1) reduction of individual case review, to review of patterns of care; and 2) shift from a punitive to an educational approach.

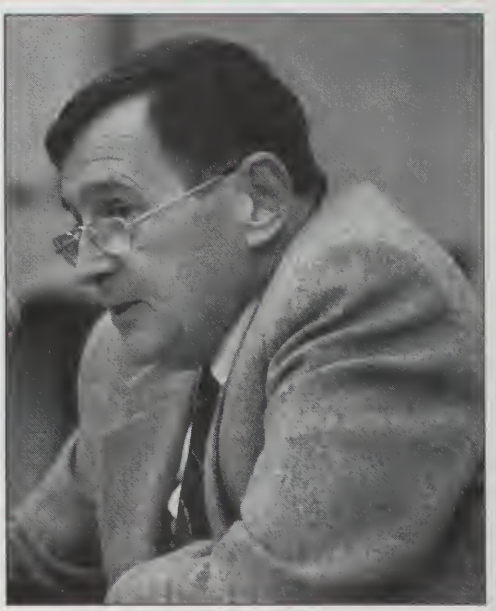
Dr. Harrop explains: "There has been a great decrease in the volume of individual case review, and rather, we're looking at the overall picture—pattern analysis—and offering educational information to physicians and hospitals."

Under this program, patterns of care are analyzed using HCFA's paid Medicare claims database—information that Dr. Harrop says "had been put to very little use" prior to the new approach. He says differences in treatment are identified, and "where it is obvious that one method is proved to be more successful than others, physicians will be informed through educational programs presented by the PRO at hospitals throughout the state."

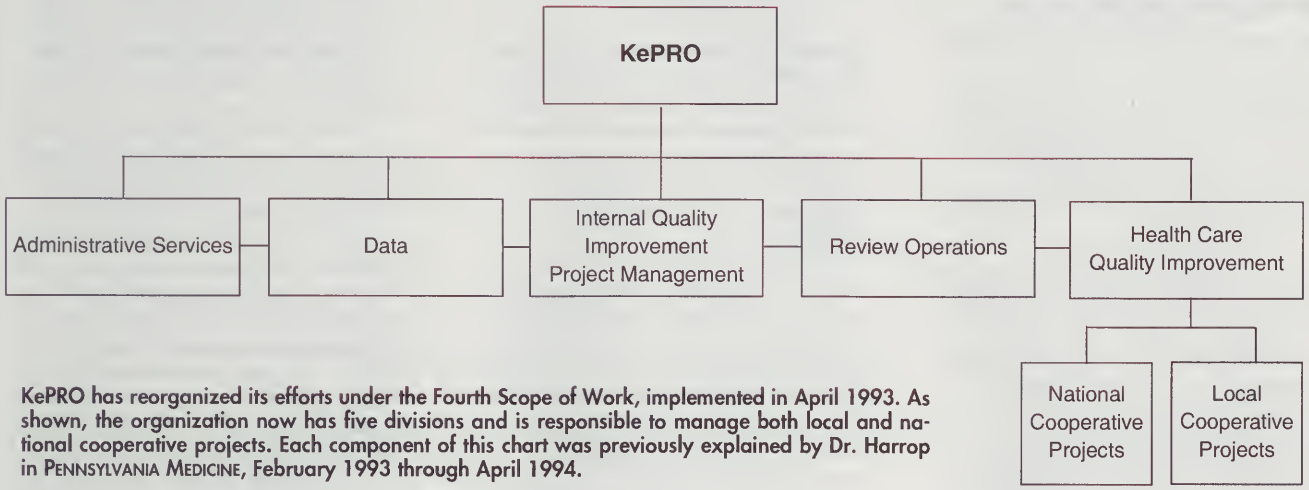
The biggest challenge of implementing the Fourth Scope, according to Dr. Harrop, has been changing mind-sets from the old focus to the new. "Initially, when

"The days of arguing about data collection and quality review are over. Data will be collected, and quality review must be done. We have to use the lessons we have learned in the past to guide us and help us move into the future."

— Donald E. Harrop, MD
KePRO President



KePRO's Reorganization



KePRO has reorganized its efforts under the Fourth Scope of Work, implemented in April 1993. As shown, the organization now has five divisions and is responsible to manage both local and national cooperative projects. Each component of this chart was previously explained by Dr. Harrop in PENNSYLVANIA MEDICINE, February 1993 through April 1994.

we go to hospitals to look at deviations in patterns of care, there is still some resentment, because they think our motives are punitive. But once they realize that what we're doing is comparing data for educational purposes, then there's been 110 percent cooperation."

He adds that changing mind-sets "has been a challenge for everyone—not only for physicians and hospital administrators, but for our employees as well."

Reorganization

KePRO has had to reorganize its operation under the Fourth Scope, including closing offices in Monroeville, Blue Bell, and Bloomsburg, and employing technical analysts. The organization now has five major divisions (see chart, above) and employs 183 workers: 153 in its Harrisburg headquarters, housed at the State Society's office building, and 30 in Tampa, Florida, where KePRO reviews Medicaid claims.

To carry out the primary purposes of the new scope—to improve the quality of care delivered to Medicare patients and to provide educational feedback to the deliverers of care—KePRO has hired a principal clinical coordinator, Lewis T. Patterson, MD, of Harrisburg. Dr. Patterson is responsible for deciding what patterns KePRO will study, for making sure the studies are properly done, and for communicating the findings to hospitals and medical staffs.

To oversee the small amount of individual case review still performed, KePRO employs a medical director, Alfred W. Meneely, MD, also of Harrisburg.

KePRO's future

Aside from HCFA's changes to the PRO program, KePRO must consider its role under whatever health system reform may come down the pike. Dr. Harrop says, "We're in a unique situation in Pennsylvania in that the Health Care Cost Containment Council is really one of the principle data collectors in the state. We shouldn't try to reinvent that wheel...to duplicate the council's effort."

Instead, he believes KePRO should continue to interpret and analyze the data, and communicate its findings to all interested parties—not only hospitals and physicians, but also to the purchasers and consumers of health care. "That role must be filled in any future system," he says, "and with our track record and capabilities, KePRO is the obvious one to fill it because that is something we know how to do...We are an independent provider of true quality review."

He adds, "The days of arguing about data collection and quality review are over. Data will be collected, and quality review must be done. We have to use the lessons we have learned in the past to guide us and help us move into the future...to build on the past and improve on it all the time."

Dr. Harrop contends that if KePRO continues what it's doing—looking at the needs of patients, physicians, hospitals, and purchasers of health care—and is able to fulfill those needs and continually improve health care, "then our future is quite bright." He adds, "KePRO's been around for almost a decade now, and I look for us to be around long after I'm gone."

SIX HEALTHNET SITES UP AND RUNNING IN PA

Telemedicine systems are now in place in six sites across the commonwealth as part of the PA HealthNet project to enhance the quality of health care in rural Pennsylvania by providing a telecommunications link to urban medical centers.

At the press conference announcing the initiative last year, Governor Robert P. Casey explained the project: "Using automated technology and communications, HealthNet will conduct remote exams, evaluations, and consultations; exchange patient information; access continuing medical education; and promote communication between rural practitioners and their urban counterparts."

Sites include: the Northeast Veterans Center (NEVC), Scranton; Wayne Memorial Hospital, Wayne; Temple University, Philadelphia; Penn State's Milton S. Hershey Medical Center, Hershey; University of Pittsburgh; and Cameron County Health Care Center, Emporium.

The first telemedicine consultations were conducted in January between Wayne Memorial Hospital and physicians in Scranton. The consultations addressed cardiology, neurology, and oncology issues. Other neurology consultations were performed between the hospital and the Hershey Medical Center in February and March.

To facilitate communication among the PA HealthNet sites, the coordinating task force is developing a physician referral directory. It will allow physicians at remote sites to identify physicians by specialty/subspecialty area who are interested in conducting telemedicine consultations.

At press time, installation of three additional systems was in progress for Glendale Area Medical Center, Coalport; Bradford Regional Medical Center, Bradford; and Charles Cole Memorial Hospital, Coudersport.

FTC GRANTS POWER TO MEDICAL SOCIETIES

The Federal Trade Commission (FTC) in February announced that medical societies now have the authority to require physicians accused of wrongdoing to participate in disciplinary proceedings, expel members from the society, disclose the unethical actions of disciplined physicians to the public, and report them to hospitals and state licensing boards. This action comes after a complaint to the FTC filed by the AMA and the Chicago Medical Society.

The FTC decision also allows medical societies to advise patients and insurers regarding a physician's fee and help them decide whether to pay a disputed bill. In its ruling, the FTC stated that any action taken by a medical society against a physician must be based on "fraudulent or unprofessional behavior" and not solely because one doctor charges a patient more than another. Under prior law, medical societies were not permitted to bring "price-related proceedings" against physicians because the FTC believed such action would result in price fixing.

AMA General Counsel Kirk B. Johnson, JD, says, "We intend to actively advise those medical societies that are conducting fee review of their expanded authority. We will advise those medical societies that have discontinued such committees to reinstate fee review committees."

PA FAILING TO ATTRACT FAMILY PHYSICIANS

Pennsylvania's family practitioners are not pleased with the state's results in the annual, national match of resident physicians with family practice residency programs which took place in March. Only 72 percent of Pennsylvania openings this year were filled, compared to 83 percent nationwide.

Thomas Weida, MD, president of the Pennsylvania Academy of Family Physicians and a member of the State Society, says the results are "another big wake-up call for Pennsylvania to get competitive." He explains: "Physicians often locate and practice in the region where they had their residency. So our ability to attract residents and keep residency graduates is critical to our primary care supply. But not only are we faltering in getting students in the residency match, last June almost half the graduates of these Pennsylvania family practice residencies left the state to practice somewhere else."

He adds that these trends are "unacceptable" in a state:

- that has declared a primary care shortage in 49 of 67 counties;
- where 12 million Pennsylvanians need and expect access to primary care services, and where there is a high per capita demand from older citizens and other groups;
- that has a large proportion of family physicians nearing retirement age;
- that boasts the nation's finest medical schools;
- that has a large concentration of quality residency programs; and
- that could be a lot more competitive in retaining and attracting primary care physicians.

MA Program Accepting HCFA 1500 Form

In response to recent legislation mandating the use of common billing forms, the Pennsylvania Department of Public Welfare, Office of Medical Assistance Programs (OMAP), is accepting the HCFA 1500 form effective April 1. The form can be used by all MA-enrolled providers, with the exception of short procedure units, hospitals, long-term care facilities, and dentists.

OMAP says:

- It will continue to accept and process the current MA invoice, "Physician's Invoice or Medical Service/Suppliers Invoice" (MA 319/319C), for those providers who prefer to continue using it.
- Pharmacists should continue to submit their claims on-line; however, they may use the HCFA 1500 to bill for medical supplies.
- Short procedure units should continue to use the MA 319 until notified otherwise.
- Outpatient hospital providers who bill for their salaried physicians may use either the HCFA 1500 or the MA 319.

Instructions for completing the HCFA 1500 are expected shortly in the *Medical Assistance Bulletin*. For more information, call the Society's Department of Medical Economics at (800) 228-7823 or (717) 558-7750.

Eighteen of the commonwealth's 29 family practice residency programs did not fill their openings. "A major identified weakness is our practice climate," says Dr. Weida. "There's too much hassle and red tape...This is the area where state efforts must focus."

"No matter what your view of the current health system or ideas for change, there is consensus on the need for more primary care and family physicians in specific. And, there is increasing competition for these doctors between networks, like HMOs and PPOs, as well as among the states," he concludes.

"Pennsylvania has taken some positive steps, such as enacting loan forgiveness and creating a primary care task force in the Welfare Department, but now it is clearly time to get very serious about meeting this challenge."

COUNTY NEWS

PHYSICIANS PARTICIPATE IN ADOPT-A-SCHOOL PROGRAM

More than 110 physicians have volunteered to participate in the Physician Adopt-a-School Program, a cooperative effort of the Philadelphia County Medical Society, the School District of Philadelphia, Physicians for Society Responsibility, the Regional Council of Child Psychiatry, and the Philadelphia Pediatric Society.

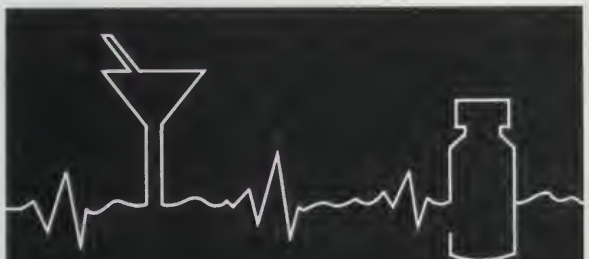
Paul J. Fink, MD, Philadelphia, piloted this program in June 1992 at the Peirce Middle School, which he describes as having "a population of around 650 students, all African-American, and an extremely dedicated faculty...The school is situated in a very poor neighborhood in which 91 percent of the children receive some form of aid (AFDC) and most of whom have experience with inner-city violence." He says the principal is "an extraordinary woman who combines intelligent leadership with an exquisite sensitivity and tireless dedication."

Among Dr. Fink's efforts, he spoke to the parents and faculty right after the new school year opened, gave a presentation at a faculty meeting, met with the Student Assistance Program team, worked with "some of the more difficult kids," and participated in the school's career day, where, he says, he learned more about the children than they learned about the medical profession.

His chief duty, however, was the "time-out" room. "The children characterized the time-out room as a jail. [It] was very uninviting—cold, silent, and purposeless," he says. "Most people share a common belief that children need to be 'tamed,' [but] in reality, children require great amounts of love, attention, and guidance during at least the first five to 10 years of their lives in order to learn how to love and be empathic and caring of others."

The principal and Dr. Fink, believing the children at the Peirce School already had lives filled with punishment, decided to redesign the time-out room "to help rather than hurt the children." In-service sessions were conducted to change faculty attitudes about the purpose of time-out, and the room was made "warmer, cheerier, [and] more attractive." Instead of using silence and fear as punishment, the faculty instituted counseling, art, discussion, and trust.

Look For Vital Signs



- Personality and/or behavior changes
- Unreliability and/or neglecting commitments
- Arrests for DUI
- Withdrawal from family and friends

HEALTHY LIFESTYLES FOCUS OF JUNE CONFERENCE

Each year, state health agencies and organizations—including the State Society—join together to promote comprehensive health education and wellness through the Keystone Health Promotion Conference. This year's event will be held June 20-24 at Susquehanna University, Selinsgrove.

Speakers will include JoAnne Owens-Nauslar, who has spent 20 years promoting the benefits of a quality lifestyle; Louis M. Slautterback, an elementary physical education teacher from Franklin, Pennsylvania; and Margarita M. Suarez, a nurse practitioner, counselor, and consultant from Issaquah, Washington, who practices in psychosocial nursing. Their presentations will focus on: self-esteem, wellness, conflict resolution, stress management, and self-image.

Also, the conference will offer:

- five days of healthy eating, learning, and playing;
- health screenings;
- interaction with colleagues from around the state who are interested in good health for Pennsylvanians; and
- competitive scholarships for teams attending the conference for the first time.

The conference is open to health care professionals, health educators, physical educators, wellness committees, principals, and superintendents. For more information, call (717) 787-9862.

DR. MURCEK SPEAKS AT REGIONAL SEPP MEETING

Dr. Murcek

State Society President Martin A. Murcek, MD, and Francis Davis, MD, publisher of "Private Practice," offered welcoming remarks at the March meeting of the Medical Action Committee for Education (MACE) of the Society for the Education of Patients and Physicians (SEPP), held in Greentree.

Edward Annis, MD, past president of the AMA who championed medicine's cause for almost 50 years, led "an impressive list of 16 outstanding national-level speakers," according to SEPP President Robert R. Urban, MD.

Also, a Canadian physician, who has practiced under both free enterprise and the single payer system, discussed the realities of the Canadian plan; and two physicians relayed personal stories of "taking on the federal government in defense of the profession and private practice." Other speakers included representatives from the fields of economics, business, insurance, federal government, and the pharmaceutical industry.

The meeting culminated with a presentation by Dr. Charles Van Eaton, a nationally known economist who heads the Economics Department of Hillsdale College in Michigan.

AMA-HMSS TO DISCUSS POLICY, POLITICS, REFORM

The AMA's Hospital Medical Staff Section (AMA-HMSS) will hold its 23rd assembly meeting June 9-13, 1994, at the Chicago Marriott Hotel. Aside from the usual policy-related activities, HMSS representatives will have an opportunity to talk with AMA trustees, hear the latest news and information from Washington, and learn the importance of and methods for physician involvement in health system reform.

Friday's educational program will focus on:

- the impact of proposed legislation on the future practice of medicine,
- the kinds of managed care entities most likely to thrive,
- the ways to cope with health care delivery changes at the local level,
- the support needed to pass legislation on physician involvement in health system reform,
- the steps for developing a physician-directed health delivery network or plan, and
- the best methods for managing patient care and physician compensation in physician health plans.

For more information, call the AMA at (312) 464-4754 or (312) 464-4761.

PRACTICE PARAMETERS TO ADDRESS REHAB TOPICS

The Pennsylvania Academy of Physical Medicine and Rehabilitation is developing practice parameters to determine basic clinical services for patients with diagnoses which require rehabilitation services. Dennis Bonner, MD, Langhorne, and James Bonner, MD, Reading, have been appointed co-chairs of the development committee.

Hearings were held across the commonwealth in March to receive input on the development of parameter topics under consideration, including: closed-head injury, spinal cord injury, cervical sprain, myofascial pain, carpal tunnel syndrome, stroke, and hip fracture.

Physicians who wish to comment on these topics, or who would like to be involved in the development process, should call Dr. Dennis Bonner at (215) 752-0200 or Dr. James Bonner at (610) 532-2633.

THORACIC MEETING SET FOR SEPTEMBER

The joint scientific session of the Pennsylvania and New Jersey Thoracic Societies, as well as the Annual Membership Meeting of the Pennsylvania Thoracic Society, will be held at the Hotel Atop the Bellevue, Philadelphia, on September 9-10, 1994.

Sessions include topics on symptom management, practice issues, pulmonary manpower, COPD, and smoking cessation. Category I CME credits are offered. For information, call Charles J. White, executive director, at (717) 540-8506.

ST. CHRISTOPHER'S RECEIVES $3.1 MILLION GRANT

St. Christopher's Hospital for Children, Philadelphia, has been awarded a $3.1 million grant for research on improving health care for children with sickle cell anemia. The five-year grant is part of the Minority Health Initiative, which was initiated by the National Institutes of Health.

The grant will fund basic and clinical research in lung disease and pain management in children. Areas of research will include: lung disease complications, pathophysiology of respiration, sleep apnea in children with sickle cell anemia and how that may precipitate the occurrence of pain crises, and drug metabolism of some analgesics.

COSTS OF HEART DISEASE HIGH ON HOSPITAL BILL

Diseases of the circulatory system account for more than a fifth of the nation's hospital bill—estimated to total $145 billion—according to a recent study of 1987 hospital charges conducted by the Agency for Health Care Policy and Research (AHCPR).

The study found that the single most expensive health problem in hospitals was ischemic heart disease. Charges for that disease totaled nearly $9 billion, followed, respectively, by normal childbirth at $5.5 billion; cerebrovascular disease and pneumonia/influenza, each of which cost roughly $5 billion; complications of childbirth at $4.7 billion; acute myocardial infarction, $4.6 billion; congestive heart failure, $4 billion; fractures (other than of the hip), $4 billion; medical complications from use of a device or procedure for diagnosis or treatment, $3.1 billion; and gallbladder disease, $3 billion.

The study also analyzed charges by type of payer. Medicare received the highest bill—nearly $64 billion—followed by private insurance, whose hospital charges totaled roughly $50 billion, and Medicaid, which was billed just under $14 billion. Other payers accounted for the balance.

According to AHCPR, the study is the most detailed examination ever conducted on a national scale of hospital charges for specific diseases and conditions. For more information, write AHCPR Publications Clearinghouse, P.O. Box 8547, Silver Spring, MD 20907; or call (800) 358-9295.

CORRECTION

In *Newsfronts* of the March 1994 issue of PENNSYLVANIA MEDICINE (page 44), the last name of the guest of honor at the annual scientific meeting in June of the Pennsylvania Academy of Otolaryngologists-Head and Neck Surgery was spelled incorrectly. His full name should have read: Fred J. Stucker, MD.

EVERYPLACE YOU WANT TO BE
IS EITHER DOWNSTAIRS OR DOWN THE BLOCK.

Conveniently located, the beautifully appointed Sheraton University City features reasonable rates, outstanding meeting facilities and Smart Alex, our lively restaurant that's a local favorite. Just down the block are the University of Pennsylvania and Drexel University, as well as the Hospital of the University of Pennsylvania, the Children's Hospital of Philadelphia and Presbyterian Hospital. But every bit as important as our great location is our great service. You'll find our staff to be friendly, competent and quick to take care of your needs. Please call 215-387-8000 or call toll free 800-325-3535 for ITT Sheraton Worldwide Reservations.

Sheraton University City HOTEL

Dr. McAfee

Robert McAfee, MD, AMA president elect, presented the Chairman's Lecture for Pennsylvania Blue Shield on March 17 at the Philadelphia County Medical Society.

Milton J. Freiwald, MD, emeritus staff member, Albert Einstein Medical Center and Women's Hospital, Philadelphia, was honored to mark the 50th year anniversary of his graduation from New York University College of Medicine, and presented with an award for his "unselfish devotion and distinguished service."

Jeffrey J. Dekret, MD, was appointed chairman, Department of Psychiatry, Fitzgerald Mercy Hospital, Darby, and Misericordia Hospital, Philadelphia.

Marc W. McKenna, MD, was appointed director of the Family Practice Residency Program and Family Practice Unit, Chestnut Hill Hospital, Philadelphia.

David J. Shulkin, MD, director, Office of Clinical Outcomes Assessment and Quality Management, and assistant professor of medicine, Hospital of the University of Pennsylvania, Philadelphia, was appointed the hospital's chief medical officer.

St. Francis Health System, Pittsburgh, has named **Elmer J. Holzinger, MD,** senior vice president of academic affairs and development.

Albert L. Pizzica, DO, director of pediatrics and neonatology, Episcopal Hospital, Philadelphia, was elected 1994-96 president, Philadelphia Perinatal Society.

James H. Herndon, MD, David Silver professor and chair, Department of Orthopedic Surgery, University of Pittsburgh School of Medicine, was elected treasurer of the Board of Directors, American Academy of Orthopedic Surgeons.

Harold J. Isard, MD, chair emeritus, Department of Radiology, Albert Einstein Medical Center, Philadelphia, and clinical professor of radiology, Temple University School of Medicine, has earned the Philadelphia Roentgen Ray Society's Distinguished Teacher Award.

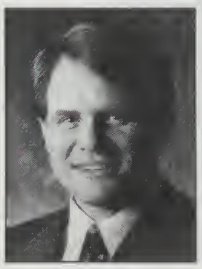
Stephen M. Soll, MD, Soll Eye Associates, Philadelphia, has co-produced with **Richard Lisman, MD,** and **Mark Weiner, MD,** both of New York, a video biography entitled, "The Life and Career of Bryon C. Smith, MD, An Innovator in Eye Plastic Surgery."

Walter Schwartz, DO, Brookhaven, was elected to the board of directors, American Heart Association of Delaware County.

The Philadelphia College of Osteopathic Medicine (POCM) opened a clinical learning lab for its Standardized Patient Program, to meet the increasing concerns of the public that many doctors need better listening and communication skills during physician/patient visits. Participating in the ribbon cutting are (left to right): Jeffrey S. Freeman, DO, clinical director of the lab; Kenneth J. Veit, DO, MBA, PCOM dean; Anthony M. Errichetti, PhD, program consultant and coordinator; Leonard H. Finkelstein, DO, PCOM president; and Matthew Haley, PCOM student council president.

In recognition of outstanding performance in research, education, and clinical medicine, the Temple University School of Medicine, Philadelphia, has named **Ward E. Bullock, MD,** Cincinnati, Ohio, alumnus of the year.

Chestnut Hill Hospital, Philadelphia, has named **Eugene Hughes Jr., MD,** chief of general surgery.



Dr. Lyons

Daniel Lyons, MD, was appointed vice president of medical affairs, Independence Blue Cross, Philadelphia. Dr. Lyons is responsible for health care management of traditional indemnity and personal choice subscribers.

Risa J. Lavizzo-Mourey, MD, was appointed to the newly created position of associate executive vice president for health policy, University of Pennsylvania Medical Center and Health System, Philadelphia, and as associate dean for Health Services Research at the medical school. Also, **Garret A. FitzGerald, MD,** was appointed chief-designate of the medical center's proposed Center for Experimental Therapeutics, Department of Medicine.

At the sixth annual awards ceremony celebrating the minority osteopathic physician, sponsored by the Student National Medical Association (SNMA) of Philadelphia College of Osteopathic Medicine, **A. Scott McNeal, DO,** Philadelphia, was presented the 1994 Meta Christy Award, in recognition of his exemplary practice of osteopathic medicine, service to the community, and inspiration to future DOs. Also, SNMA presented **Carl R. Pullen, DO,** Germantown, with a Mentor Award.

David Brent, MD, associate professor of psychiatry, and chief, Division of Child and Adolescent Psychiatry, University of Pittsburgh Medical Center's Western Psychiatric Institute and Clinic, was awarded the 1993 Beatrice Cummings Mayer Award from the American Academy of Child and Adolescent Psychiatry for the best articles on suicide or depression submitted to the academy's journal.

OBITUARIES

Philip Berg, MD, *Bellaire, TX*
Jefferson Medical College of Thomas Jefferson University, 1938; age 81, died January 2, 1994. Dr. Berg was a general practitioner.•

Morris A. Bowie, MD, *Newtown Square*
Harvard Medical School, 1929; age 90, died February 1, 1994. Dr. Bowie was a rheumatologist.•

Robert Cohen, MD, *Philadelphia*
University of Pennsylvania School of Medicine, 1948; age 68, died January 21, 1994. Dr. Cohen was a pediatrician.•

Nathan N. Ginsburg, MD, *New Castle*
Hahnemann University School of Medicine, 1932; age 89, died January 9, 1994. Dr. Ginsburg was an obstetrician/gynecologist.•

Robert G. Goldstrohm, MD, *Indiana*
University of Pittsburgh School of Medicine, 1951; age 68, died February 20, 1994. Dr. Goldstrohm was an ophthalmologist.•

Philip E. Kistler, MD, *West Chester*
Temple University School of Medicine, 1955; age 63, died February 6, 1994. Dr. Kistler was a family practitioner.•

Morris Kleinbart, MD, *Philadelphia*
Jefferson Medical College of Thomas Jefferson University, 1925; age 92, died February 28, 1994.•

Guy L. Kratzer, MD, *Allentown*
Temple University School of Medicine, 1935; age 82, died March 18, 1994. Dr. Kratzer was a colon/rectal surgeon.•

John J. Madonna, MD, *Emmaus*
Temple University School of Medicine, 1947; age 70, died February 28, 1994. Dr. Madonna was a general surgeon.•

Grace L. Riethmiller, MD, *Sewickley*
University of Pittsburgh School of Medicine, 1940; age 82, died January 19, 1994. Dr. Riethmiller was an obstetrician/gynecologist.•

Joseph E. Shelby, MD, *Uniontown*
Temple University School of Medicine, 1938; age 83, died January 13, 1994. Dr. Shelby was a general practitoner.•

George A. Dunkelberger, MD, *Lancaster*
University of Pennsylvania School of Medicine, 1933; age 89, died February 13, 1994. Dr. Dunkelberger was a general practitioner.

Charles C. Guyer, MD, *Montrose*
Hahnemann University School of Medicine, 1947; age 77, died February 6, 1994.

Newton W. Hershner, MD, *Mechanicsburg*
University of Maryland School of Medicine, 1941; age 78, died February 7, 1994. Dr. Hershner was an obsterician/gynecologist.

Boyd N. Park, MD, *Butler*
Temple University School of Medicine, 1951; age 67, died January 25, 1994. Dr. Park was an anesthesiologist.

Paul T. Poux, MD, *Guys Mills*
University of Pennsylvania School of Medicine, 1949; age 67, died January 15, 1994. Dr. Poux was a general practitioner.

Nicholas S. Nicholas, DO, *Drexel Hill*
Kirksville College of Osteopathic Medicine, 1939; age 76, died January 26, 1994.

Rajeswari Suseelan, MD, *Clarks Summit*
Madras Medical University, India, 1973; age 46, died February 3, 1994. Dr. Suseelan was a family practitioner.

Charles Fineberg, MD, *Philadelphia*
Hahnemann Univesity School of Medicine, 1950; age 73, died February 14, 1994. Dr. Fineberg was a general surgeon.

• Denotes membership in the Pennsylvania Medical Society at the time of death.

The Educational and Scientific Trust of the Pennsylvania Medical Society provides you with a way to make a significant statement honoring the memory of and paying tribute to your colleagues who are deceased.

Send your tax-deductible memorial gift to The Educational and Scientific Trust of the Pennsylvania Medical Society, 777 East Park Drive, P.O. Box 8820, Harrisburg, PA 17105-8820.

Teaming up with you for better health.

At A.I. duPont Institute, we know that better health starts by having you on the team.

By integrating your knowledge and experience about your patient with our specialized medical expertise, we can provide continuity of care that supports strong aftercare and family involvement.

Our staff of over 220 specialists will give you prompt and meaningful feedback -- working with you each step of the way to keep you informed of your patient's progress.

We believe that working together is the best way to help children.

For a copy of our new professional staff directory, call ***1-800-829-KIDS.***

Only for children.

group practices. Excellent salary with incentive, benefits, 4 wks. vacation, 1 wk. CME, possible teaching. Physician driven corp. located in high growth area. Additional opportunities near Pittsburgh and other areas in Pennsylvania. Contact: Yannelli, Randolph and Co., 997 Old Eagle School Rd., Ste. 202, Wayne, PA 19087; 1-800-292-6354; FAX 610-964-1616.

Pennsylvania—Become the newest staff member of the Medicine Department of a 746-bed academic medical center in Pittsburgh. The BE/BC general internist will be on the faculty of the Medical Center of Pennsylvania and Hahnemann University within the General Internal Medicine Division. Primary responsibilities would be for the clinical care of Medical Assistance patients who are members of a hospital-owned provider program. Teaching and private practice would constitute a secondary emphasis for the physician. The blend of clinical and academic responsibilities offers one diversity and variety in a progressive, expanding medical center of excellence. Call coverage is available and a competitive financial package is being offered. For further information regarding this remarkable and rewarding opportunity, send your curriculum vitae to Andrew Johns, Physician Services of America, Suite 250, 2000 Warrington Way, Louisville, KY 40222 or call 1-800-626-1857, extension 237.

University Psychiatrist, Penn State—Counseling and Psychological Services is seeking a psychiatrist for providing evaluation and treatment of students; case consultation with multidisciplinary professional staff; back-up support for emergency services. There are opportunities for research, teaching and supervision of psychology interns and graduate students; affiliation with Psychology Department. In addition, this position affords an opportunity to collaborate in redesigning the delivery of psychiatric services to university students. Excellent opportunity for part-time private practice. This is a 9-12 month negotiable position. Requires a Doctoral degree, with 5-7 years work-related experience. Application deadline: May 15, 1994. Send letter of application, resume and salary requirements to: Employment Division, JOB# P-3153, 120 S. Burrowes St., University Park, PA 16801. An Affirmative Action/Equal Opportunity Employer. Women and minorities encouraged to apply.

Board Certified/Eligible internist. Salary commensurate with experience and qualifications. Recurring bonus available. Federal malpractice insurance; 30 days paid vacation; 15 days sick leave per year; CME leave and reimbursement; Federal retirement plan with tax deferred savings plan and matching government contributions. Health and life insurance. Contact Human Resources Management Service, James E. Van Zandt VA Medical Center, Altoona, PA 16602-4377; (814) 943-8164, ext. 7039. (Applicants may be subject to random pre-employment drug testing). Equal Opportunity Employer.

CHAIRMAN/DIRECTOR

DEPARTMENT OF OBSTETRICS AND GYNECOLOGY

MERCY

Mercy Health Corporation is seeking a Board Certified Physician to serve as Chairman/Director of the Department of Obstetrics and Gynecology. Mercy Health Corporation is conveniently located in metropolitan Philadelphia and includes three hospitals: Fitzgerald Mercy Hospital, Misericordia Hospital, and Mercy Haverford Hospital with an aggregate of 845 licensed beds. The Chairman/Director has overall responsibility for Medical Education, Quality Assurance and Credentialing throughout Mercy Health Corporation. The Chairman Director is also responsible for the strategic direction of OB/GYN, program development and physician recruitment at Fitzgerald Mercy Hospital.

Mercy Health Corporation is a major teaching resource for physicians, nurses and allied health professionals. Free-standing residency programs are maintained in Internal Medicine, General Surgery, Diagnostic Radiology, a Transitional Residency Program and integrated residency programs are maintained in Obstetrics/Gynecology and Emergency Medicine.

Mercy Health Corporation provides a spectrum of health care services ranging from primary care to highly specialized regional programs. Selected areas of clinical emphasis include a new radiation oncology center, maternal/infant/pediatric services, including a level II/III intensive care nursery, and emergency and trauma services.

In addition to Board Certification in Obstetrics and Gynecology, the position requires a Pennsylvania license and demonstrated abilities in clinical, educational and administrative responsibilities. The position offers an excellent salary and benefits. Qualified applicants may submit their curriculum vitae in confidence, including salary requirements, to:

Jerome Singer, M.D.
Chairman of Search Committee

ARMY RESERVE MEDICINE. BE ALL YOU CAN BE.®

The Truth Shall Set You Free

Mike Magee, MD

One of the real paradoxes in health care over the past 30 years is that we have resisted utilizing the language and tools that could have helped us avert the current health care crisis. Clinical practice analysis with an eye toward continuous improvement, elimination of "non-real" work, proactive planning, inclusion, and continuous measurement and improvement would have gradually allowed health care to progressively reshape in concert with environmental changes into a more efficient, streamlined, and seamless form of patient-centered care. Though we are entering late in the game, these tools remain our most important asset in reassuming a leadership position.

"When you can expect what will occur, you have more time to plan and more time to spend with the patient."

It is not surprising that clinicians respond positively to data. Our professional training requires careful scientific review and conclusions based on fact rather than hunches. The process of medical and nursing education not only exposes clinicians to data, but asks them to react to it.

The concept of continuous learning and information explosion with constant new medical discoveries is ingrained in the health professions. There is always a better way. The only question is whether we wish to define a better way in an organized fashion collaboratively rather then informally as a totally autonomous and separate group of individuals.

When you examine clinical practice data by DRG in a setting supportive of nurse/physician/management collaboration, the program rapidly focuses on acknowledging that there must be a better way and then defining what that way is. For example, our institution examined hip replacements and asked our physicians to identify an ideal progression after sharing with them their actual utilization data and the national norms for length of stay and charges. That same week they returned to us, having met formally with all the orthopedists and medical consultants, with a care plan that conformed to the national standards and outlined day by day exactly what treatments and therapies would be required. In addition, the plan began six weeks prior to hospitalization and extended six weeks beyond hospitalization, outlining all of the preoperative evaluation steps and all of the postoperative community based continuity steps.

This plan was then provided to our nursing, allied health, and management staff who overlaid their own plans so that it would be comprehensive. We identified the hospital processes that needed to be improved to support the new plan and modified our medical records so that each day of inpatient hospitalization for hip replacement, the critical pathway for that day appeared in a window in the left hand side of the progress note. This provided the capacity for charting by exclusion for our nursing staff and a system for monitoring our own performance against the standard that we had set within this care pathway.

Added bonus: We were then able to take this clinical plan and share it with payers to demonstrate our cost-effective, value-enhanced approach, as well as to confirm that interprofessional collaboration was part of our institutional mission.

While physicians have been largely unenthusiastic about quality assurance activities in the past, it is not because we don't want better patient care. It's because those activities have not worked. In contrast, the creation of care paths provides a coordinate standard of care and a defined approach by diagnosis. This then forms the basis for measurement of performance and continuous modification to improve the consistency of the outcome, and the efficiency and accessibility for the patient and physician. When you can expect what will occur, you have more time to plan and more time to spend with the patient.

The concentration of doctors, nurses, and managers on building a better system around patient services is inherently a self-rewarding activity, and careful critique places us in a stronger leadership position and in good control of our own destiny. This data is complex with many ramifications. In the absence of our own aggressive self analysis and construction, the data is interpreted, manipulated, and refined by non-providers often unfamiliar with the daily care of patients.

Hospitals possess clinical practice data but are afraid to share it, fearing it will explode already tenuous medical staff relationships. Physicians must encourage hospitals to share this data and help design constructive forums for its analysis and use.

Dr. Magee is senior vice president at Pennsylvania Hospital, Philadelphia. This article is excerpted with permission from his **Geometry of Physician Relations** *series.*

We'll help you put something unusually strong in your prescriptions.

Complete confidence.

Confidence. Your patients have it in you, but do you have it in the prescription drug information you currently receive?

The Pennsylvania Medical Society recognizes that you need an unbiased, credible source of drug information. That's why we developed the Center for Professional Drug Education and Information. Established for physicians based on recommendations by physicians, the Center offers you a resource on prescription drugs you can trust.

Help Your Patients Understand Health System Reform

"Exploring the Issues in Health System Reform" is a full-color brochure specially designed to help Pennsylvania physicians talk to their patients about health system reform. Developed by the State Society, it explores the issues from the physician's viewpoint, and can help your patients understand basic health system reform concepts and terminology.

Issues Explored:

- Freedom of Choice
- Preserving Quality of Care
- Fostering Innovation and Technological Advancement
- Patient Involvement
- Professional Liability Reform

Return the original coupon below to receive 10 free copies of "Exploring Issues in Health System Reform."

Mail to:
Division of Communications and Public Affairs

Thriving Under Capitation —page 30

SOMETIMES THE BEST DEAL IS THE ONE YOU HAVEN'T HEARD ABOUT.

Maybe you haven't heard about the Medical Inter-Insurance Exchange (MIIX). After all, we're a relatively new player in Pennsylvania's medical professional liability insurance marketplace.

But ask your counterparts in New Jersey, and you'll find we've been getting rave reviews since we wrote our first policy there in 1977. We're proud that 98 percent of our 9,000 insured physicians renew their policies each and every year. With such an outstanding track record, we must be doing something right.

Perhaps it's our **innovative products**, such as our new **$500,000** HIV benefit that provides income protection — at no additional charge — for physicians who become HIV positive. We were the first professional liability insurer in the state of Pennsylvania to offer this coverage.

Or maybe it's our **commitment to service**, which includes 24-hour customer assistance and a claims staff that's the best in the industry. Our insureds know that MIIX makes sense financially, too, considering our outstanding discounts for new and part-time practitioners. We also offer flexible premium payment plans that help you manage your money.

Because MIIX is a **physician-owned company**, you can be assured that everything we do is designed with your best interests in mind. Call us today so you can join your peers who are already benefiting from the MIIX difference.

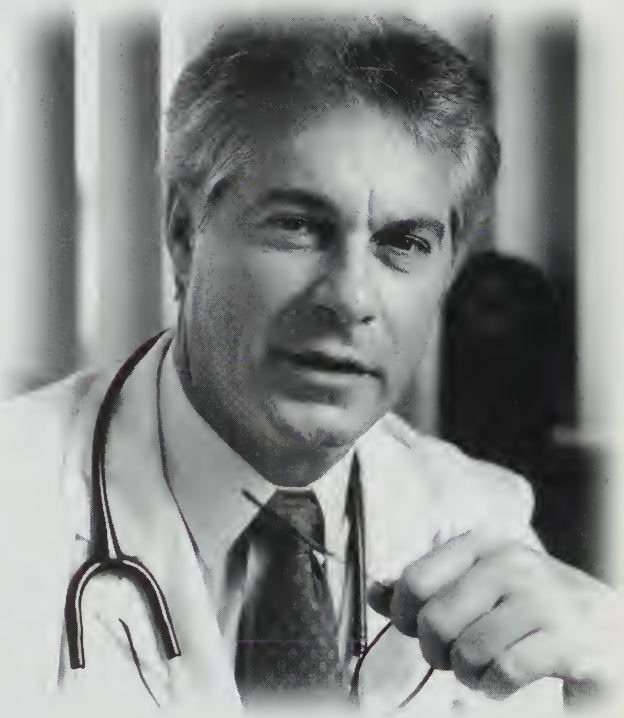
"Unfortunately,

he was already sitting in my examining room. This guy was a walking liability suit looking for a victim. He was angry, non-compliant. It was one of those rare, no-win cases and, well, I guess my number was up.



Then I remembered PMSLIC. So I stepped into the next room and gave them a call. They put me in touch with a member of their Risk Management team, who advised me of the relevant legal issues and the implications of each of my alternatives. Right on the spot. As a result, I was able to make the best medical recommendation with the peace of mind that comes from knowing my legal interests were also protected. I guess that's what it's all about. Peace of mind. The kind you only get from people who really take the time to help. That's excellent service. I'll never change carriers."

SENATE PASSES OPTOMETRY BILL; HOUSE COMMITTEE REVIEWING: The Senate on May 17 passed by a vote of 29-18 Senate Bill 1061, which proposes amendments to the Optometry Practice Act to expand optometry's scope of practice. The bill would allow optometrists to use therapeutic agents without input from a physician in the creation of clinical training standards. *Physicians are encouraged to contact their state representatives to oppose the bill,* which has been referred to the House Professional Licensure Committee. A vote is not expected until fall.

SOCIETY OPPOSING NEW HOUSE BILL: The State Society and the Pharmaceutical Manufacturers oppose newly introduced *House Bill 2733,* which would require physicians to document a potential adverse reaction if a brand name drug is desired in place of a generic drug for patients of the Department of Aging's Pharmaceutical Assistance Contract for the Elderly (PACE) program. Representative Kevin Blaum (D-Luzerne) introduced the bill to generate savings to allow more seniors to participate in the program; the Society contends that it creates another paperwork requirement for physicians. The bill was referred to the House Aging and Youth Committee, chaired by Representative Blaum, for consideration this month.

In related news, three other bills addressing medical issues have been introduced in the legislature: *House Bill 2845,* introduced by Representative Dante Santori (D-Berks) and referred to the House Health and Welfare Committee, would provide a tax credit to businesses that allow special employee paid leave for bone marrow donation; *Senate Bill 1724,* introduced by Senator Ed Holl (R-Montgomery) and referred to the Senate Banking and Insurance Committee, would require insurance coverage for cancer treatments; and *Senate Bill 1661,* introduced by Senator Stewart Greenleaf (R-Montgomery) and referred to the Senate Judiciary Committee, would provide power of attorney for health care.

AMA PUSHING PATIENT PROTECTION ACT: The American Medical Association (AMA) on May 23 introduced the Patient Protection Act—legislation to ensure that health care treatment decisions are made by patients and physicians, not insurance companies. The insurance industry responded immediately with a massive campaign against the act, and the AMA is seeking individual member support. An all-physician AMA mailing was scheduled for June 1, and the organization is preparing patient brochures explaining the act. For more information, see page 29.

PHYSICIANS NAMED TO PMSCO BOARD: Eight Pennsylvania physicians have been named to the Board of Directors of the Society's newly formed subsidiary, PennMed Member Services Company (PMSCO). They are: **Jeffrey H. Chaby, DO,** Lancaster; **Edward H. Dench Jr., MD,** State College; **John E. Devenney, MD,** Norristown; **Edward R. Jones, MD,** Philadelphia; **George R. Fisher III, MD,** Philadelphia; **Michael J. Prendergast, MD,** chair, York; **James R. Regan, MD,** vice chair, Bethlehem; **Marc J. Schneiderman, MD,** Coraopolis; and **Anne Woods, MD,** York. Also, **Roger F. Mecum,** Society executive vice president, will serve as secretary/treasurer. PMSCO will provide practical, physician-directed consulting and practice management services to physicians.

DR. GRECO ELECTED CHAIR, STATE BOARD OF MEDICINE: Victor F. Greco, MD, the Society's Twelfth District trustee, was elected chair of Pennsylvania's State Board of Medicine on May 24. Members of the board chose Dr. Greco of Drums to succeed Joshua Perper, MD, who resigned from the board to accept a position in Florida.

FOUNDATION FINANCING EXAMINATION OF HEALTH SYSTEM REFORM: The Robert Wood Johnson Foundation has bought a two-hour block of prime time on NBC television and has asked the network's news division to fill the slot with an "ambitious examination" of health system reform. The special program will be broadcast without commercials on June 21 from 9:00-11:00 p.m. The foundation paid $2.5 million for the air time, and will provide another $1 million to promote and advertise the special.

Beware the Golden Calves of Las Vegas

John W. Mills, MD
Medical Editor

Time magazine on January 10, 1994, "covered" its publication with the Golden Sphinx of the Luxor Casino-Hotel and referred to Las Vegas as "the new All-American City." My initial impression of that cover conjured up a scene from "Moses," that colossal film by MGM, portraying the words of Exodus 32:1-6 in which the people "formed a molten calf and altar, [and] sat down to a feast which turned into an orgy of drinking and sex." That same week, the *Kiplinger Washington Letter* predicted that "gambling will be the fastest growing industry of the '90s."

"Our mission is awesome: to be competent individuals focused on helping our fellow man."

Legal betting totaling $330 billion each year is a big business! To put it in perspective, annual health care expenditures in this country total more than $650 billion, and President Clinton's plan would cost about $331 billion in new taxes. Our country cannot continue to squander these huge sums on instant self-gratification.

Consider for a moment some interesting *Time* statistics: Las Vegas has the second highest lung cancer rate in the country and the highest suicide rate; of the city's 22 million visitors, nearly half are under age 30; and violent crime and murder rates for Las Vegas are now only slightly higher than the national averages, probably because the rest of the country has come to resemble Las Vegas.

Remember that gambling "brings problems along with jobs and tax revenues—bankruptcies, divorces, organized crime, and child support delinquencies," to quote Mr. Kiplinger.

As I opined before on these pages, America's moral fiber has lessened considerably, and I believe we are in danger of self-destruction if we continue this downward spiral. Our search for sensual extended gratification is embodied by the golden glitter of Las Vegas. Our state lotteries have spurred the get-rich-quick mentality which permeates our society.

This last issue is responsible in no small way for our huge increase in malpractice suits, both from the patient's perspective and from the legal community which disguises its focus—huge monetary awards and thus fees—as weeding out the bad doctors and hospitals. Unfortunately, much of this activity is really maloccurrence; and because of the trend toward increasingly impersonal medical encounters, it's easy for the patient and attorney to see "big bucks" from known deep pockets—state law requiring heavy coverage.

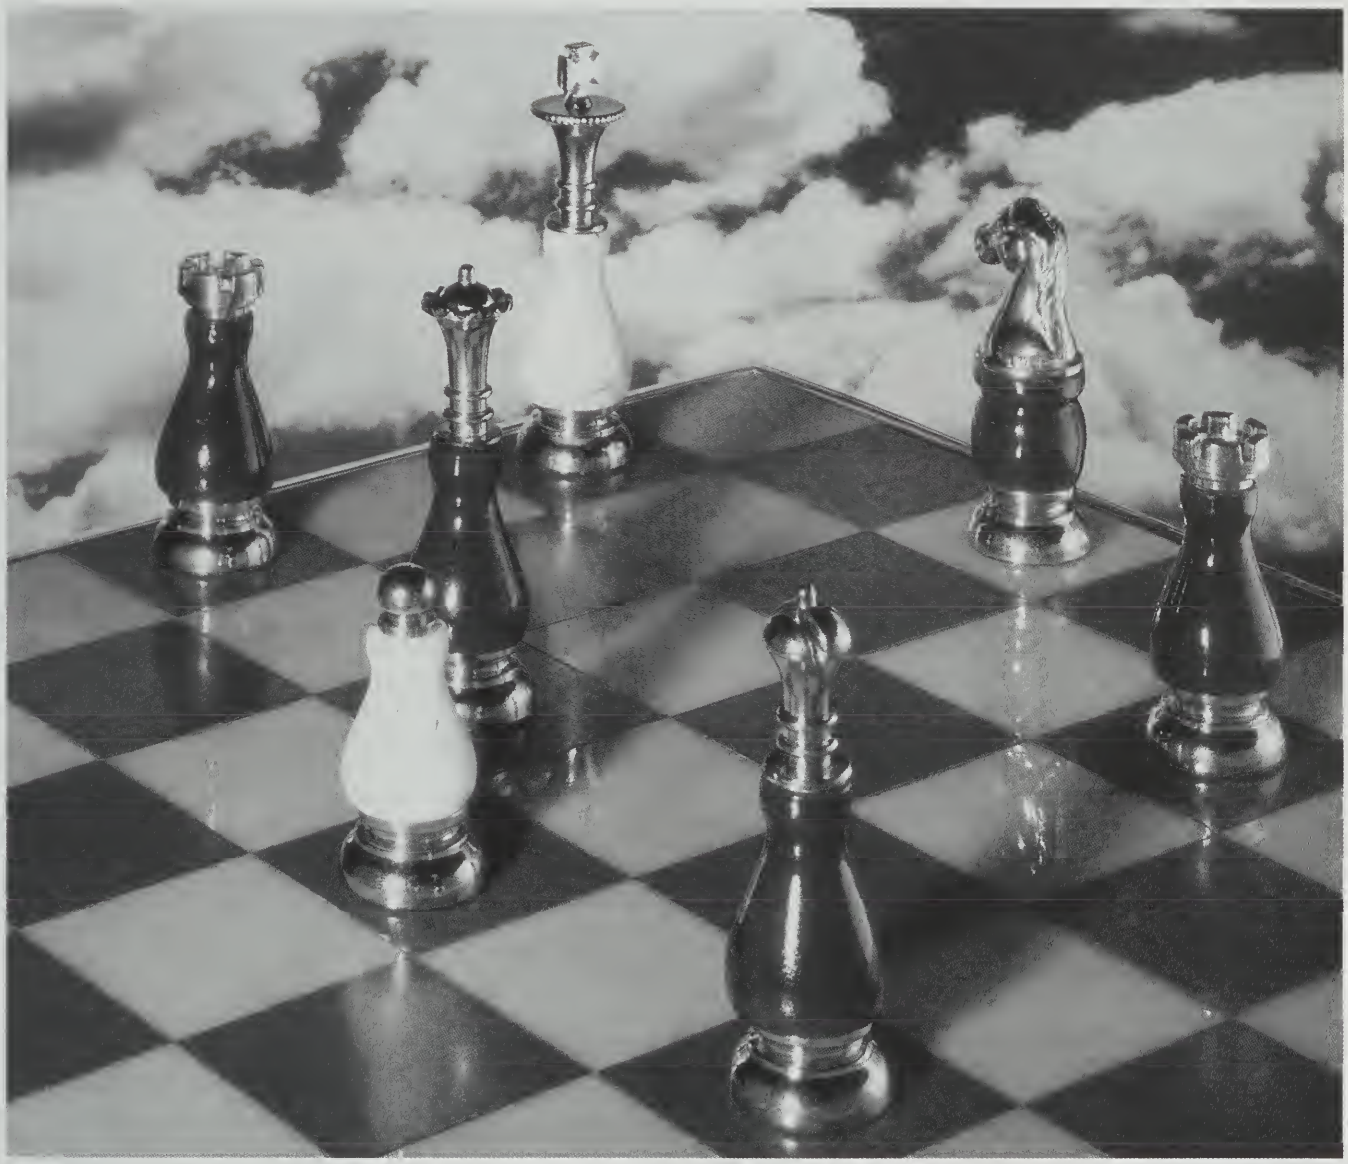
Our loosening of moral fiber has also translated itself into a justice system that is ineffective. The legal community bends over backwards to give "rights" of all types to everyone, and just when we need better control to deal with our violence and drug problems and our national dishonesty, we have a justice system that is politically motivated and tolerant beyond belief—searches for weapons in public housing riddled with crime violate the Fourth Amendment because they are "unreasonable," according to the ACLU.

Physicians have always had a very high ideal to follow—the Hippocratic Oath. But we, too, are guilty of the get-rich mania around us.

Remember, ladies and gentlemen, there is no free lunch. A country that tries to survive on gambling revenues will either be taken over by organized crime or eventually burn itself out into oblivion. Such revenues will eventually top out, and we will pay the piper in high tax increases or severely cut services.

The real meaning of all this for us and our profession is quite simple. We need to stick together and join in some common goals: tort reform *now*, encompassing a non-economic damage limit to $250,000 and caps on lawyers' fees; freedom to choose one's personal physician, just as our president has; a standard benefits package for all citizens; the right to purchase excess health insurance (not duplicate); and finally, to monitor ourselves to provide care that is cost effective and medically appropriate, and to work to bring our colleagues into compliance.

Our mission is awesome: to be competent individuals focused on helping our fellow man. We must be conscionable men and women as examples for our society to emulate. Let us be fully aware of what the golden calves of Las Vegas and what instant gratification really mean: perhaps, as *Time* put it, "one more symptom of the decline of Western civilization."



In claims, it's the endgame that counts

A malpractice claim brought against a physician brings to mind two things: reputation and money. We consider a third: the bond of care and trust between physician and patient.

Successful endgame results resolve all three. To do that, you need a consistent, winning strategy. Strategy that considers the merits of the claim, the complex court system and the National Practitioner Data Bank. Knowing when **and how** to fight is crucial.

In little more than a decade, we've achieved checkmate in over 95% of the cases taken to court. A vigorous defense, a successful conclusion for our policyholders. And always, your participation in every decision. When we need to settle a claim, settlements are fair to both parties.

We're here to serve physicians, patients and the healthcare field. How is this done? With financial stability, competitive premiums, integrity, and the right team members.

Physicians Insurance Company is dedicated to making all these elements work together. That's why we get to endgame with confidence. That's why we'll continue to be here for our policyholders.

Scattershot Approach Pleases Clintons

Martin A. Murcek, MD

Excerpted from Dr. Murcek's address on April 20 to attendees of the State Society's 1994 Spring Assembly.

An issue that has been bothering me for a while now is the scattershot approach of the various specialty societies that have, in one form or another, thrown in their lot with the Clintons on behalf of the health system reform plan. It is one thing for specialty societies to say that they are throwing support behind the Clinton plan because they want to have a place at the bargaining table. What they have in fact done is another thing—appearing on stage as enthusiastic Clinton plan supporters.

As Senator Dick Armey from Texas says, "From their places at the table, they will ultimately become the main course."

I sincerely doubt that the position espoused by the leadership of these groups reflects that of their rank-and-file members who are in active practice. In my many years of experience with specialty societies, I have too often seen situations where the leadership consists of physicians who have left the ranks of their active-practice colleagues. Clearly, this is a reflection of the fact that active practice entails considerable time commitment, compared to the lesser time demands experienced by physician-employees or retired physicians. This situation results in leadership ranks with few, if any, active-practice physicians participating.

Consider retired physicians in leadership roles; the increase in regulatory hassles and the paperwork explosion that has occurred in the last few years hasn't impacted them. Unless they are hearing from active practice physicians about these ever-mounting headaches, they are probably oblivious to the drag that red tape is placing on the typical actively practicing physician's practice. It's always easy to support more government paperwork when you don't fill any out anymore. It's easy to agree to fee caps and fee deductions when you don't collect fees any longer. Don't get the wrong idea; I'm not disparaging retired physicians for being retired; I look forward to being one myself someday.

Also, consider physician-employees. They are shielded from a good portion of the cost of doing business by the organization that employs them. Some physicians have opted to be employees for exactly that reason, and there's nothing wrong with that. It is true, however, that "out of sight is out of mind," and this lack of perspective translates into a willingness to "compromise" active practitioners right out of business by cozying up to the federal government's plan.

Dr. Gary Levin, medical director of Gould Medical Group of Modesto, California, is quoted as saying, "I expect to convert my physicians to a salary system within a few years." Gerry Benedict, Gould's former CEO, a nonphysician, points out, "Physicians resist being salaried because it's difficult to monitor and evaluate their performance, [and] the bureaucracy and controls to appraise each doctor are large and viewed as 'Big Brother.'"

If you have to do the paperwork, however, and you have to collect enough in fees to meet an office payroll, purchase supplies, pay licensing and regulatory fees, keep the phones and lights on, and wrestle with insurance companies, HMOs, PPOs, etc., you don't need any additional forms to fill out or constraints on charging reasonable fees.

Some physicians wonder whether their specialty society's leadership have talked to any of the rank-and-file active-practice members before announcing their unfortunate positions on the Clintons' plan. I hope this serves as a wake-up call to younger physicians—it's tougher than ever for a young physician to find time for involvement with their specialty society's leadership hierarchy, but it is their involvement that can turn the group around.

Physicians just beginning to practice need strong, unified, organized medicine leadership that will fight to preserve our quality of medical care and practice environment. We practice the best medicine in the world here in America; let's get organized medicine's leadership all on the same page, committed to keeping it that way. It's time for us to forge alliances putting physicians back in charge where they belong!

ou're on solid ground with the Dodson Plan.

More than 75 years ago, Bruce Dodson, Sr. pioneered the concept of the dividend plan for workers' compensation insurance. Dodson Group has been helping businesses like yours save on premium costs ever since.

The Dodson Plan gives you the opportunity to earn a dividend each year, depending on the claim experience of all insured members. We carefully select those who participate, creating the greatest potential for you to save.

Pennsylvania Medical Society endorsed the Dodson Plan in 1973. Since then, participating members have earned a total of **$2,309,240** in dividends. Share in the savings!

You're on solid ground with Dodson.

LETTERS TO THE EDITOR

DELEGATES MUST REFLECT DESIRES OF MEMBERSHIP

I have read with interest Dr. John Mills' editorial, "Further Thoughts on Health Reform" [PENNSYLVANIA MEDICINE, March 1994, page 6]. I support his call for physicians nationwide to unite. Indeed, it is our only chance.

I object, however, to his contention that the Philadelphia County Medical Society is the villain who has brought about the division in Pennsylvania over a single statewide Medicare charge class. It is clear to me that the divisive action was the action taken at the House of Delegates meeting in October 1993.

The Philadelphia County Medical Society knew then, and subsequent facts have proven, that the overwhelming majority of Pennsylvania Medical Society members and nonmember physicians in Pennsylvania oppose conversion to a single locality. He states that the House action was a democratic process. What could have been more democratic than the Philadelphia County Medical Society seeking the opinion of thousands of physicians in Pennsylvania?

Rather than using this experience as an opportunity to bash Philadelphia, I suggest we use it to force the House of Delegates to reflect on its responsibility to its members. The vast majority of the medical societies in counties where physicians would have experienced a decrease in Medicare reimbursement under a single locality subsequently opposed the petition. I have personally received copies of 2,200 letters from physicians which were sent to the Health Care Financing Administration opposing the petition. I am sure I have not received copies of all letters which were sent.

When was the last time that many physicians felt so strongly about an issue that they took time to write on their own letterhead? Federal health system reform may very well impose a nationwide charge class, and we may have little to say about it, but we will not tolerate our own Society leaders imposing it upon us.

The House of Delegates clearly did not sense the pulse of physicians in Pennsylvania on this issue. Lacking this awareness, the delegates took a divisive action. The lesson to be learned is that when there is no need for radical immediate action, delegates should take time to insure that they are reflecting the desires of their membership.

William S. Frankl, MD
President
Philadelphia County
Medical Society

Response: Thank you for your letter. The editors appreciate your comments and your support. You need to understand, however, that Society leaders did not impose anything on anybody.

The House of Delegates is responsible only to their county constituencies. Indeed, the House should continually reflect on its responsibility to Pennsylvania Medical Society members, as well as nonmembers, since statewide actions affect all Pennsylvania physicians.

In this case, Society staff and leaders carried out the House decision—to request from the Health Care Financing Administration (HCFA) a single statewide charge class. That is our duty as noted in our bylaws. And HCFA determined, by the large number of "no" votes via letters which you garnered, to turn down the House's action.

Perhaps the delegates did not sense the pulse of Pennsylvania physicians—but they did feel strongly enough to vote it up, and sometimes that takes courage!

Interestingly, Ohio and Oklahoma—states which also have big cities and small rural counties—both recently requested the same action, and it was granted by HCFA. Perhaps we and "the city of brotherly love" could learn from them how to be less divisive.

John W. Mills, MD
Medical Editor

TALE OF A TOENAIL

Editor's Note: Edward A. Lottick, MD, editor of the Bulletin of the Luzerne County Medical Society, *recently called this letter to our attention, saying "I've gotten some very positive local commentary—even from a Blue Shield official." It was originally published in the* Bulletin *in March 1994.*

Dear Mrs. Clinton:

I am a family practitioner and have been in practice here in my home community for the past 25 years.

The purpose of this letter is to tell you about Mrs. Glub's toenail. If someone screens your mail, they may not think this letter is very important, but let me assure them, it is important for Mrs. Glub.

Mrs. Glub came to my office a while back complaining that she had a very painful toe. "You have an ingrown toenail. Go home and soak it," I said. She replied, "I've been soaking it for two weeks. You've got to do something!"

"Come with me," I said, and escorted her into my surgical suite. Shirley prepared her, and I injected local anesthetic over the nerves supplying the toenail area. I then removed her entire nail, which provided immediate relief. She was amazed and very grateful.

Shirley sent a bill for $125.00 to Blue Shield of Northeastern Pennsylvania (Medicare). We subsequently received a check for $21.46. "There's got to be some mistake," I said. "Send an appeal." We then received a letter from the carrier that said: "We paid $21.46 because that is the rate."

After all of the above, a different Medicare patient came to my office with the same complaint. I said: "Yes, that is an ingrown toenail. I'll refer you to a specialist." We received $25 for that visit, and we subsequently learned that the podiatrist was paid $400 for removing the toenail.

I don't know if you talk about such health care delivery anomalies as this in Washington, but I thought someone should hear about Mrs. Glub's toenail.

Best wishes,

Edward A. Lottick, MD
Kingston

Your Letters Are Welcome

The editors of PENNSYLVANIA MEDICINE encourage comments about the magazine and its contents, as well as viewpoints on current medical issues. Letters should be typed or legibly handwritten, concise, and should not exceed 200 words.

Medical Assistance Plans Will Soon Blanket State

Fred Baldwin

Pennsylvania officials and physicians are piloting three alternative programs to the current Medicaid system in an effort to improve access to care and control rising costs. This article explores and compares the programs and their benefits.

Plans to launch three new programs for providing medical services to Pennsylvania's Medical Assistance (MA) patients are proceeding on schedule, according to officials at the Pennsylvania Department of Public Welfare (DPW). All three programs—each serving a different geographical area—will require MA recipients to choose a single provider for primary care, but they differ in significant ways.

The largest of the three in geographical coverage is the Family Care Network, which will serve children and youth under 21 years of age in 60 counties of the state on a fee-for-service basis. Almost as large in terms of eligible clients, HealthChoices will offer a choice among managed care plans to individuals of all ages within Philadelphia County and five adjacent counties—Berks, Bucks, Chester, Delaware, and Montgomery—which together contain roughly 40 percent of the state's MA recipients.

The smallest, but potentially most ambitious program, is the Lancaster Community Health Plan. Limited to Lancaster County, it will begin as a fee-for-service program for patients of all ages, and is later slated to include a comprehensive computer database and a managed care option.

Access, cost, and quality

Throughout most of Pennsylvania at present, individuals eligible for MA receive a card and a list of doctors in their areas who have previously billed for MA services. Clients have no guarantee, however, that doctors on the list are prepared to accept new patients. Moreover, the card is issued along with approval of other benefits, like cash assistance and Food Stamps, that are likely to be of more pressing importance to clients. Rather than finding a personal physician, many MA patients continue to rely on hospital emergency rooms for primary medical care.

DPW spokespersons say that improving the quality of medical care to MA patients is an even more important consideration than cost savings.

"Yes, there is a cost-savings aspect to this," says Frank Lentz, director, DPW Bureau of Special Medical Assistance Programs, "but the primary emphasis of the program from our standpoint is humanitarian. I know that sounds very self-serving, but I've heard so much that tends to imply that we're prepared to sacrifice thousands of clients to save a couple of bucks. I really need to stress that that's so far from our intention that it's almost ludicrous. There's so much that we can all do to improve the health quality of our clients, to prevent problems from happening, to keep them out of the hospital, and to get them in when they need it."

Currently, the department is responsible for paying for health care services for approximately 1.6 million MA recipients. The annual cost is more than $5.5 billion, which is more than 20 percent of the state budget. In the last four years, program costs have more than doubled.

DPW is under pressure to redesign its service delivery network as a result of a class action lawsuit filed in the U.S. District Court in Philadelphia by a number of Welfare rights and other advocacy organizations. The suit alleges that DPW's card-and-list approach does too little to help MA recipients take advantage of their rights to primary and preventive health care, particularly Early, Periodic, Screening Diagnosis and Testing (EPSDT) services for those under age 21, who comprise just under half of those who receive Aid to Families with Dependent Children (AFDC) benefits in Pennsylvania.

The litigation, which is still pending, involves other issues and names other state agencies as defendants. DPW, however,

Video Tape Promotes Lancaster Plan

In response to action by the 1993 House of Delegates, the State Society has prepared an informational video tape for county medical societies to promote the concepts behind the Lancaster Community Health Plan. The tape, which includes interviews with legislators and community leaders, was mailed to county societies in early May.

Mr. Baldwin is a contributing author from Carlisle.

believes that its new delivery system will blunt criticisms that it has been insufficiently aggressive on behalf of AFDC clients. The department also hopes its programs will enable it to stay a jump ahead of national health system reform efforts.

"I think this dovetails very nicely with President Clinton's proposals," says Lentz, speaking primarily of HealthChoices. "I think we're at least on the cutting edge, along with some other states."

Family Care Network

The Family Care Network (FCN), the 60-county program limited to under-21 patients, will work as follows. The program contractor is Automated Health Systems Incorporated, a Pittsburgh-based firm that has been providing management support for Early, Periodic, Screening Diagnosis and Testing. The contractor's first task is to recruit primary care providers, who may be either individual doctors, clinics, or hospitals. Providers receive $3 per month for each patient accepted in addition to the standard schedule of fees for service. Physicians decide for themselves how many MA patients they wish to accept: The maximum is 1,000 patients for a single physician or 5,000 for a site. These maximums may be waived if necessary to avoid disrupting existing patient-provider relationships.

Once enough providers have signed up, households and individuals eligible for assistance are contacted and encouraged to choose a provider from among those available. Clients who do not choose are assigned providers, but may change later if they wish.

Participating doctors and sites must provide primary care services, including EPSDT, and ensure 24-hour access to medical care. Although physicians receive lists of recipients who are assigned to them or who are disenrolled, they are responsible for verifying that patients are eligible for MA by dialing a toll-free number.

The providers also serve as gatekeepers for referrals. Specialists accepting referred patients will be paid according to the standard MA fee schedule; the program will not normally pay the costs of self-referrals from patients. Patients who show up at hospital emergency rooms with conditions that do not qualify for emergency care will be referred back to their FCN physicians. Patients who insist that a hospital provide non-emergency treatment are advised that they may be held responsible for costs.

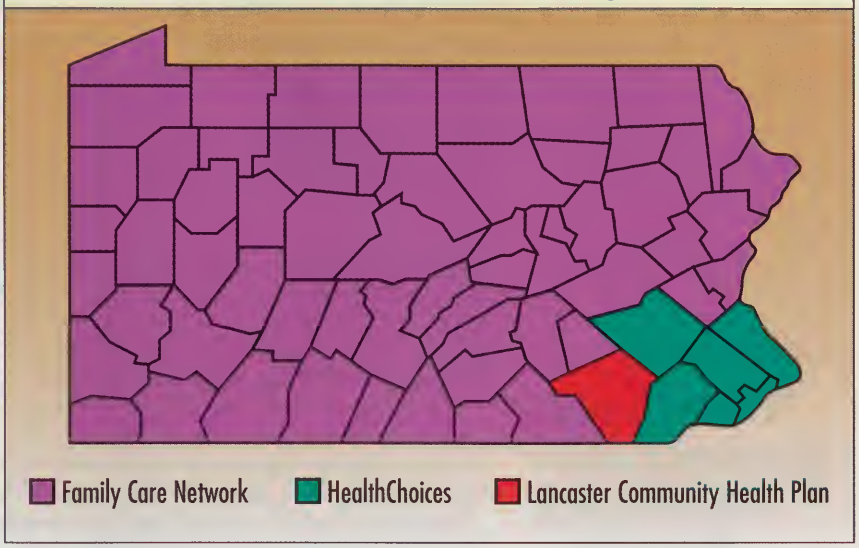
To test how its plans would be received, DPW began enrolling physicians in York County in December 1993. Dauvey Hoffman, FCN program manager, says she was encouraged that 60 physicians signed on promptly, including all hospitals and health centers. They made commitments to serve 28,000 patients, more than twice as many as needed for the county's 11,500 recipients. In February about half of the patients made their own selections of physicians; the rest were assigned physicians. The department is expanding the program to other counties, beginning with Erie, Washington, and Westmoreland, and hopes to have 72,000 patients assigned by the end of July and approximately 400,000 assigned by July 1995.

"Ultimately," says Hoffman, "we want each child to have access to a 'medical home'—primary and preventive medical care through a consistent source. The goal is a relationship to a physician so that families will feel comfortable going there and also stop going to an emergency room where no one knows them and where we have to pay a premium price for a condition that can be handled by a primary care provider. Although it's a cost-saving program, it's really designed to improve medical service delivery."

HealthChoices

HealthChoices, a mandatory managed care program, will serve MA recipients of all ages—roughly 650,000 living in its six-county area. It will replace an existing mix of fee-for-service arrangements, voluntary HMOs, and one mandatory managed care program now operating in southern and western areas of Philadelphia.

Geographical Coverage of Medical Assistance Plans in Pennsylvania



"The smallest, but potentially most ambitious program, is the Lancaster Community Health Plan."

→

"I think this dovetails very nicely with President Clinton's proposals," says Lentz, speaking primarily of HealthChoices. "I think we're at least on the cutting edge, along with some other states."

The new program will divide the six-county area into three zones, each of which will be served by at least two HMOs. Each zone includes a portion of Central Philadelphia, where the concentration of MA clients is heaviest. This geographical division resembles three wedges of a pie, rather than a center-city bullseye surrounded by suburban rings.

This aspect of the plan has drawn criticism from some potential service providers (see "HealthChoices Under Fire," below), but the DPW position is that the three zones should be as similar as possible with respect to general demographics and caseload mix and, therefore, in attractiveness to insurers. All HMOs must guarantee that patients have access to providers no more than 30 minutes away in urban areas and no more than an hour away in rural areas.

DPW issued the technical portion of its request for proposals to potential contractors in February, followed by supplemental financial data in March. The department will reject bids priced higher than 91 percent of the costs of a fee-for-service program within each zone, based on existing caseload mix. Lentz says that an initial bidders' conference attracted 138 attendees, representing about 90 organizations. The schedule calls for selecting contractors during early summer and matching clients to plans by the end of this year.

As already noted, Lentz sees cost containment and access to quality health care as mutually complementary goals: "It's far better for the client, the managed care plan, and the taxpayers if they [the HMOs] manage that care by keeping people healthy [rather] than if they let things go until there's a problem that requires extensive correction. It's penny-wise, pound-foolish to withhold from someone a $1,000 treatment if a year from now they'd require a $10,000 treatment."

Lancaster Community Health Plan

The Lancaster Community Health Plan (LCHP) grew out of the work of a broad-based community task force—developed by the Lancaster City and County Medical Society and the Lancaster Business Plan on Health, and chaired by Robert Doe, MD, an emergency physician at Lancaster General Hospital and president of the county's medical society in 1992.

The plan was reviewed by the Pennsylvania Medical Society—which recommended some revisions and committed support to its further development—and in 1993, LCHP incorporated. It will begin to enroll providers toward the end of summer. Dr. Doe says that in an early survey, half of Lancaster County's approximately 600 physicians showed interest in enrolling.

LCHP initially will operate much like FCN, but is slated to add several features. Like the Philadelphia program, LCHP will cover all MA patients, not just those under 21. Doctors in a solo or small-group practice may choose to satisfy the 24-hour coverage provision through an arrangement with a local hospital emergency department. The emergency department personnel will perform triage and gatekeeping functions for a fixed rate. If the patient needs to see a physician, but the situation is not a true emergency, the hospital will charge a fee for an office visit.

HealthChoices Under Fire

In March, the Pennsylvania Health Law Project, the Hospital Association of Pennsylvania, and the Coalition of High Volume Medicaid Hospitals filed suit in Commonwealth Court seeking to block the Department of Public Welfare (DPW) from proceeding with implementing HealthChoices.

The plaintiffs contend that the plan could be disruptive to existing care relationships—those now receiving care from health maintenance organizations or from specific health care providers might be forced to switch depending on which firm gets the contract.

The suit also charges that the way DPW has structured the program by dividing Philadelphia into three separate zones will potentially have a negative effect on access to care. Further, the issue of public notice and lack of opportunity to comment through the administrative and regulatory processes has been raised in the complaint.

A preliminary hearing on the request for injunction was scheduled for May 18. At press time, the State Society's Legal Counsel was reviewing the complaint, and the Board of Trustees is considering the issue.

"Ultimately," says Hoffman, "we want each child to have access to a 'medical home'—primary and preventive medical care through a consistent source."

Work is also underway toward designing a computerized database called the Community Patient Information Network. Initially, the database will maintain basic information on LCHP patients to reduce local duplication of services and to simplify reporting to DPW. Later it will facilitate electronic billing, report writing, tracking individual patient problems, and tracking immunizations and well-child visits.

Finally, LCHP expects to negotiate with private insurance agencies in hopes that they will contract with DPW to provide managed care options both for MA patients and for other groups of uninsured and low-income workers. Ultimately, the "Lancaster Plan" envisions MA patients under the same umbrella—or, better, given the same choice among umbrellas—as the general public.

"We've all felt that you need to move toward a Philadelphia [managed care] model eventually," Dr. Doe says. "But you need time to learn how to manage this population and to provide an incentive for the providers to be involved. We believe that you should be mainstreaming these patients. What's the point in continuing Medicaid apart from the rest of the system? If I were a Medical Assistance patient, I'd like to be treated like any other patient, and the economies of scale can't be realized by creating duplicate networks."

He says that with slight variations, the Lancaster Plan may work in other counties, but notes that the key to such success is local flexibility: "Not every community will fit into one cookie cutter solution."

Another key to success, according to Dr. Doe, is physician involvement in such efforts. "It is extremely important for physicians to demonstrate our interest in our community, and it brings a lot of credibility to the physician population if you get involved, especially if the physician community takes the lead through the county medical society."

He adds, "The good faith and good feelings that come from such involvement begin to spread into other aspects of health care delivery and other aspects of the community health care system...It's a great way to be a part of the community."

LCHP has submitted to DPW a proposed contract outlining its program. Assuming there are no problems with the contract, or state funding for the contract, the program will begin operation in late summer or early fall.

Society Supporting Lancaster Plan

The Pennsylvania Medical Society in March 1993 affirmed its support of the development and testing of local networks—in particular, the Lancaster Community Health Plan (LCHP)—to deliver care in a coordinated system to Pennsylvania's Medical Assistance (MA) population.

The Society continues to support testing of the networks, and maintains that if LCHP is successful, it be used as a model for the development of other local networks across the commonwealth to serve the uninsured and underinsured, as well as MA recipients.

For more background on the Lancaster Community Health Plan and Dr. Robert Doe's involvement, see "Fighting the Access to Care Crisis," PENNSYLVANIA MEDICINE, February 1994, pp. 36-38.

For further information on the Society's position, call the Department of Regulatory Affairs and Specialty Legislation at (800) 228-7823 or (717) 558-7750.

Playing "Gotcha"

Mark W. Shulkin, MD

One Society member considers the ABCs of life, politics, and medicine.

"The EOB comes back with the printout, 'Payment is rejected because services were provided after the patient was deceased.'"

My BW (beautiful wife) took a gourmet cooking course from Joan Specter (Senator Arlen's BW). The cuisine at our house was so improved that I planned to invite the Specters over for dinner as a token of my gratitude and a demonstration of what a good teacher Joan was. That was 25 years ago when Arlen was still Philly's D.A. I'm such a terrible procrastinator that before I got around to calling Arlen, he got elected Pennsylvania's senator, and the Specters moved off to Washington.

Maybe this particular procrastination had something to do with the question, What do you talk about to lawyers like Arlen Specter over dinner? Lawyers are bored with the horror stories that doctors tell about dealing with insurance companies. Lawyers get indigestion when you bring up tort reform.

Then I got this great idea about entertaining Arlen with this fun game we doctors play with third party payers (TPPs). It's called "GOTCHA." If I ever get over my procrastination tendencies, I plan to invite Arlen to dinner so I can teach him how to play it.

I played a great game of GOTCHA last month.

I consulted for a 48-year-old patient (PT) at a nursing home (NH) early last year. She was there because she's quadriplegic due to multiple sclerosis (MS). I saw her again about a month later for follow-up.

Sometimes it pays to procrastinate

A dyed-in-the-wool procrastinator, I didn't get around to submitting my claim for the two visits until recently. That, incidentally, is not entirely dumb since procrastinating on submitting insurance claims gives other providers a chance to submit their claims first and to satisfy the yearly deductible for me.

Three weeks after I submitted my forms, the Explanation of Benefits (EOB) comes back with the printout, "Payment is rejected because services were provided after the patient was deceased."

Her death was exaggerated

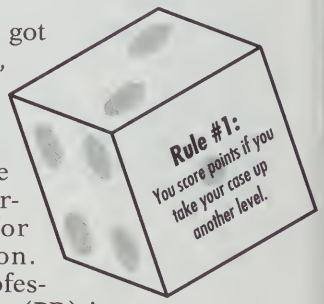
Curious, I called the NH to inquire about the circumstances of her demise, and I learned, to quote Mark Twain, that the rumor of her death was very much exaggerated. I made a toll call to the TPP's utilization review (UR).

After doing my time on hold, a very nice lady (VNL) explained to me that when a PT goes to a NH, their disability check is undeliverable to their home, and it gets returned to Social Security (SS). SS figures that the only reason anyone would return a check to them is because they are dead. Sounded reasonable to me.

"What should I do?" I asked the VNL at the other end of the telephone wire. She told me, "Resubmit with a note on the Health Care Financing Administration (HCFA) 1500 form stating that the PT is alive."

Computers don't read notes

I did what the VNL said and guess what happened. You're right! Three weeks later, my mailman (MM) brings me another EOB saying that the claim was rejected because the service was provided after the patient was deceased. Computers don't read notes.



By the time I got the second EOB, the year from date of service was approaching, setting me up for a 10 percent penalty for late submission. So I called Professional Relations (PR) instead of UR.

I forgot to point out that you score points in GOTCHA if you take your case up another level. You score more points if you use the initials for things, and your opponent doesn't know what they stand for.

Dr. Shulkin is a psychiatrist in Bala Cynwyd.

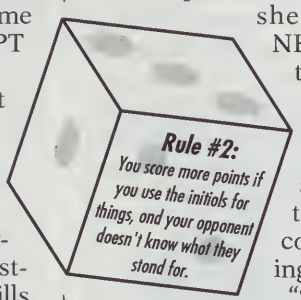
You lose points if your opponent uses initials, and you have to ask what they mean.

After doing my mandatory hold time, PR put me in touch with another VNL. This VNL efficiently looked the claim number up on her computer and told me that I could not be paid because the PT died in 1992.

I asked VNL why the TPP wasn't prosecuting me for submitting fraudulent claims. "GOTCHA," I thought.

The VNL said, "We don't do that because you wouldn't like that very much, and we're dedicated to improving PR." The game was getting interesting. This VNL was a match for my skills.

I explained about the returned disability check and SS's false assumptions that its return was indication of the PT's death. Could VNL correct the record?



BC in the sky

"Oh no!" said VNL. "That's the Big Computer (BC) in the sky. No one can change that. We have no access to it. There's nothing we can do." I thought I heard VNL whisper, "GOTCHA."

Turns out, VNL wasn't referring to the Deity in invoking the BC. SS in Baltimore keeps the records on its mainframe, and TPPs have no access to it.

"What do you suggest?" I countered. "Just forget about it?" (GOTCHA, I gloated.)

"Well, that's a thought," VNL mused. "None of the PT's doctors have been paid since 1992." She told me I had to get either the PT's relatives or the PT to call SS to verify that the PT was alive.

"But the reason the PT's in the NH is because PT has no relatives, and PT can't function for herself," I whined. Secretly I thought, "GOTCHA!"

"Then have the NH call SS to reprogram the BC," VNL warbled.

"But the NH doesn't work for me, and I can't assign work to the NH personnel. Besides that, the NH tried calling SS and didn't get any result," I rallied. I was about to get her.

I'll call them tomorrow

"Suppose I call the NH tomorrow and ask them to do it?" offered VNL.

I'm the expert on procrastination, so I said, "They're open today, VNL, why not call them now?" I gave VNL the phone number.

VNL called back a few minutes later and said that no one answered at the NH. She'd copied the number wrong. When she finally reached the NH, she called me back to say that she learned that SS had sent a representative to the NH two weeks ago, and SS had verified that the PT was to be counted among the living.

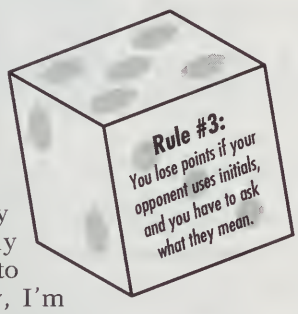
"So now I can resubmit HCFA 1500?" I ventured, tasting victory.

"No," replied VNL, "because BC hasn't been reprogrammed yet."

"When should I resubmit?" I queried.

"I can't tell you that," says VNL. "We never know when they'll reprogram BC. You'll just have to keep trying."

Playing trump



SS can procrastinate too, I reasoned, but I didn't give up. It was time to play my trump card!

"You've been very helpful, and I really appreciate it," I said to VNL. "By the way, I'm planning on inviting Senator Specter over for dinner, and I'll mention to him how helpful you were."

"GOTCHA" was my thought.

"You know," says VNL, "I'll leave this information on my desk and check my computer every day. When the change is made, I'll just have them send you the check without your having to resubmit the HCFA 1500 form."

"Thank you very much, VNL," I exuded. I soliloquized, "Victory is so sweet. I love this game."

As soon as I hung up, came the dawn! In VNL's handling my claim for me so expeditiously, I was going to be the first and only doctor to satisfy the PT's deductible for 1993. Eighty percent of two consultations at $61.21 each would amount to less than the $100.00 deductible. I would get exactly nothing! GOTME!

Tracking Family Practice Graduates

John R. Tyler, MD

Lancaster General Hospital in 1991 surveyed graduates of its 21-year-old Family Practice Residency on a number of medical and non-medical issues. The results, overviewed in this article, may lay the groundwork for future efforts to obtain a national consensus regarding family practice education in its current format.

The Lancaster General Hospital (LGH) Family Practice Residency, one of the country's earliest such programs, accepted its first residents in July 1970. Today, it continues to prosper, having graduated 196 well-trained family physicians, almost all of whom are practicing in the U.S. The program regularly tracks its graduates to assess the perceived quality of the training program in preparing graduates for practice, as well as determining the nature and satisfaction of graduates' jobs.

Earlier surveys have evaluated practice patterns[1-4] and job satisfaction[5-6] following family practice residency education, but in anticipation of the program's twenty-first anniversary celebration, all graduates were surveyed regarding education/practice, practice location, hospital- and office-related issues, work week, non-practice-related activities, professional activities, training, and practice satisfaction. Virtually every graduate year was represented equally in survey responses.

Demographics

Seven respondents had obtained additional education and were presently active in another specialty: three in psychiatry, two in dermatology, one in obstetrics, and one in acupuncture. Three graduates with no additional residency training are practicing emergency medicine.

Nearly 40 percent of LGH residency program graduates have established practice sites within Lancaster County. Twenty percent more have remained in Pennsylvania, and another 20 percent practice throughout the Northeast. Others are scattered throughout the U.S., including Hawaii and Alaska; missionaries are serving permanent assignments in Africa and the Philippines.

Respondents are equally distributed throughout rural, semi-rural, suburban, and urban locations, though these descriptions were not qualified.

Practice patterns

A majority of respondents (83 percent) identified hospital practice as a part of their business. A similar majority (82 percent) did not offer obstetrical delivery as a service.

Obstetrical practice patterns among family practice physicians in the Southeastern U.S.[7] and specific to Pennsylvania[8] have previously been investigated. It is notable that until 1989, LGH obstetricians provided the bulk of the curriculum in this field. Since that time all additional family practice faculty joining this program (five) include obstetrics in their practice.

By bringing these skills to their role as educators, full family practice OB coverage now exists with obstetrical specialists serving the role of consultant. The influence of this family physician role modeling on future graduates remains to be seen, but undoubtedly affected the decision of one-half of the 1992 and 1993 graduates to include obstetrics in their practice plans.

Also, group practice was much more popular than solo (102 vs. 22), and virtually every respondent used a computer for business efficiency, and 50 percent used transcribed office notes.

Professional activities

A large majority of the respondents listed interest in regional, specialty-specific politics, such as state and local chapters of the American Academy of Family Physicians (86 percent) and local medical societies (52 percent). Participation in national organizations was less represented (AMA, 39 percent; Society of Teachers of Family Medicine, 13 percent; Physicians for Social Responsibility; eight percent).

Dr. Tyler is director, Walter L. Aument Family Health Center, a division of Lancaster General Hospital, Quarryville.

The stimulus to maintain current clinical information provided during graduate medical education, previously referred to as "intrinsic audit,"[9] is followed variably by outside sources, including journals (64), lectures/conference (41), continuing medical education courses (56), and consultants (9).

Training program

With the perspective of time and experience, an overwhelming majority of LGH graduates described the amount and type of training received during their residency years as "appropriate" and "about right." The few exceptions were in the areas of: office management, "need much more" (76); cardiology training, "excessive" (20); and obstetrics, "excessive" (15).

The majority of negative cardiology comments were from graduates prior to 1989, and the majority of negative obstetrics comments were from more recent graduates, corresponding to major curriculum changes that year, increasing time devoted to obstetrics and moving time in cardiology to a more general internal medicine focus. Fewer disappointments were noted by more recent graduates when compared to the '70s graduates.

On a scale of one to five, respondents valued career choice far higher than satisfaction with current income (see table, above, right). Answers to questions regarding lifestyle and on-call obligations demonstrated no consistent pattern.

This survey of one of the largest single family practice residency graduates groups in Pennsylvania affords an opportunity to review the perceptions of students with the perspective of time and experience. Curriculum modifications that will fulfill the roles desired by this group will best be made guided by report cards such as this document.

The statistical significance of the responses summarized here would be enhanced by a future effort to survey multiple programs, eliminating some of the parochial bias inherent in this effort. Finally, the fact that this survey garnered a 71 percent response rate despite its six-page length underscores the importance this group assigns to data collection perceived to have potential future impact on positive change. ○

FURNITURE THAT'S GOOD FOR BUSINESS.

Serving Central Pennsylvania

Why Should the Physician Bother with CMNs or Orders?

Medicare Part B has been expending vast sums for durable medical equipment used in the home—prosthetics, orthotics, and various supplies (parenteral and enteral nutrition, dialysis, dressings, etc.). To ensure proper utilization, Medicare has now established Durable Medical Equipment Regional Carriers (DMERCs) to administer claims for items of durable medical equipment, prosthetics, orthotics, and supplies (DMEPOS).

Designating carriers that deal only with these items will result in increased efficiency and expertise in claims processing and adjudication. Creating only four regional DMERCs for the entire nation will lead to more consistent medical policy development and format. Ultimately, this should translate into savings for the Part B Medicare program.

While the physician's authority has been gradually eroded over the years, with many other health-care professionals filling various patient needs in the hospital, home, and community, the DMERCs have insisted on deferring to and maintaining the proper role of the physician as the leader of any health care team. It is the physician who should be signing off on the necessary items of DMEPOS, and not only the supplier and Medicare.

Physicians are also reimbursed from Medicare Part B funds. In this time of ever-decreasing national fiscal resources, it is in the physicians' interest to take an active role in overseeing the proper utilization and distribution of DMEPOS items, which represent a substantial proportion of Medicare payments.

In order to accomplish this oversight and control function, physicians are asked to merely review and sign their orders to suppliers, and similarly for the Certificates of Medical Necessity (CMNs) for prosthetics, orthotics, and supplies. (CMNs for items of durable medical equipment require partial completion by the physician, along with his/her signature.) Although this may at first seem to be just another burden, consider this scenario: If a physician writes a prescription for a "wheelchair," without any added details about wheelchair type or accessories, a wheelchair worth approximately $25,000, or even an electric wheelchair worth nearly $40,000, might be supplied, when a far less costly item could have served equally well.

Only the attending or consulting physician is in a position to know the needs of his or her patient. Allowing DMEPOS suppliers to take verbal/telephone orders, and write them down for the physician, while requiring only the physician's signature verification, encourages dialogue between the two. While the physician knows the patient's condition, the supplier can explain the purpose of the various available features that he or she feels are appropriate. The suppliers maintain the DMERC medical policies and should know the proper indications for levels of equipment. This can prove an educational experience for physicians, as well as ensuring that the patient is issued only that which is needed.

Finally, if a supplier must abandon the attempt to obtain a properly physician-completed or punctually returned CMN, the patient will end up paying for the needed medical equipment. This would be an unfortunate hardship on a patient whom the doctor is otherwise trying so hard to serve, and who otherwise would have been entitled to this Medicare benefit.

Please consider all these points when you are asked to deal with a CMN or order for DMEPOS items. We physicians have traditionally asserted our proper role as the patients' medical guardians. We would never consider having anyone other than physicians write orders for our patients in the hospitals or our offices.

We have been trained to write precise prescriptions based on our scientific knowledge and years of acquired clinical judgment. Why would we allow anyone other than ourselves to fill this role when it comes to medical equipment?

The author, Paul D. Metzger, MD, is consultant to the medical director, The Travelers Medicare DMERC Region A, Wilkes-Barre.

PATIENT ENROLLMENT IN MANAGED CARE INCREASING

While enrollment in managed care plans is increasing, many people have very little information about plan features when they enroll, according to a Gallup Survey done for the AMA.

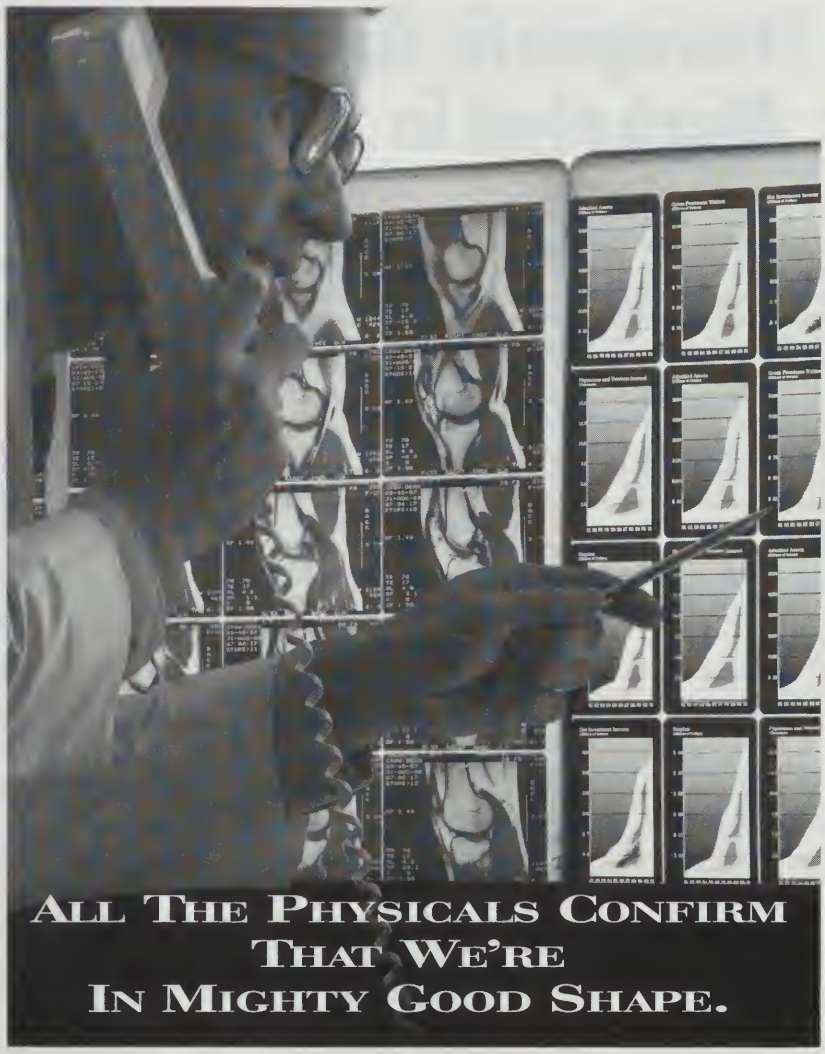
The telephone survey was of 3,540 randomly selected adult household heads, 2,153 of whom reported being employed and covered by insurance other than Medicare or Medicaid. Of those, 743 reported being enrolled in managed care plans.

Gallup says that the number of households enrolled in managed care plans—21 percent of all households and over 35 percent of those employed—suggests growth in managed care enrollment.

Those most likely to be in managed care were aged 25-44 years, African-Americans, and more often living in the West. There was also a direct relationship between household income and managed care enrollment: 29 percent of households making under $25,000 per year were in managed care, while 39 percent of those making $75,000 or more were not.

DPW To Process Medicare Crossover Claims

The Pennsylvania Department of Public Welfare (DPW) has announced that Medicare Part B Crossover processing of claims will begin on June 6, 1994. Claims submitted to the Medicare carriers, Pennsylvania Blue Shield and The Travelers, for individuals with dual coverage of Medicare and/or railroad retirement coverage and Medical Assistance, will automatically be sent to DPW for further payment processing. A *Medical Assistance Bulletin* will be issued to inform providers of the Medicare Crossover process.



ALL THE PHYSICALS CONFIRM THAT WE'RE IN MIGHTY GOOD SHAPE.

Examine our performance and you'll agree. Membership was up again last year, passing 17,000. Total premiums written surpassed $165 million. Policyholders' surplus in excess of $50 million. Healthy numbers, confirmed by insurance auditors, and an A.M. Best Rating of B+(Very Good). We have a strong financial position, increasing market share and competitive pricing. A solid foundation for your future. For more information, call us at 1-800-228-2335.

New Therapeutic Agents Marketed in 1993

This is the third in a series of articles overviewing new drugs marketed in the U.S. in 1993.

Daniel A. Hussar, PhD
Remington Professor of Pharmacy
Philadelphia College of Pharmacy and Science

In 1993, the Food and Drug Administration (FDA) approved 25 new molecular entities (NMEs), 23 of which are for therapeutic use and two are diagnostic agents. Eleven of the NMEs for therapeutic use, as well a new biological agent intended for therapeutic use, were both approved and marketed in the United States in 1993. In addition, 11 other NMEs that the FDA approved before 1993 (most in late 1992) were marketed during the year. Thus, a total of 23 therapeutic agents reached the U.S. market for the first time in 1993, a considerably lower number than the 30 new therapeutic agents marketed in 1992 and the record number 31 new agents marketed in 1991. Many of the 13 therapeutic agents approved in 1993 but not marketed before the end of the year have become available in early 1994.

Of the 23 new therapeutic agents first marketed in 1993, 22 are considered in this series. The one agent not reviewed is flosequinan, which was withdrawn from the market after being available only several months because of a concern about toxicity.

This review considers the new agents' most important properties and, when possible, compares them with other available agents with similar properties. When additional information is needed, more comprehensive references and the product literature should be consulted.

Agent for metastatic bone pain

Strontium-89 chloride (Metastron-Medi-Physics; Zeneca) is a radiopharmaceutical that decays by beta emission. Following intravenous administration, it selectively concentrates in bone mineral and its uptake by bone occurs preferentially in sites of active osteogenesis. Therefore, primary bone tumors and areas of metastatic involvement can accumulate significantly greater concentrations of strontium than surrounding normal bone. The drug has minimal effect on normal bone and surrounding tissues.

Nearly 50 percent of individuals with prostate or breast cancer eventually develop bony metastases which may result in severe and unremitting pain. It is estimated that as many as 100,000 cancer patients suffer from painful bony metastases for which treatment often involves the use of high doses of opioid analgesics. Strontium-89 is indicated for the relief of bone pain in patients with painful skeletal metastases and represents an important alternative for cancer patients whose pain is not adequately controlled with conventional analgesic regimens or who experience unacceptable adverse reactions with these agents. The new drug improved pain control in about 75 percent of the patients in the clinical studies and, in one study, 20 percent of patients with advanced prostate cancer experienced complete pain relief. In addition to providing pain relief and reducing or eliminating narcotic requirements, strontium-89 may also delay or reduce the number and size of metastatic sites and time to pain recurrence.

A single dose of strontium-89 provides long-term pain relief for an average of six months. The onset of pain relief is typically delayed, often occurring seven to 20 days after injection. During the first week after the injection, patients may actually experience a transient increase in pain. This "flare reaction" usually lasts from two to four days and can generally be managed by increasing analgesic medications during this time period.

Strontium-89 suppresses the bone marrow, particularly the white blood cells, which fall by about 20 percent, and platelets, which are depressed by about 30 percent. Recovery occurs slowly, typically reaching preadministration levels three to six months after administration of the drug. It is recommended that peripheral blood cell counts be monitored at least every two weeks. When the drug is used in combination with cytotoxic agents, the additive toxicity to the bone marrow should be considered.

Strontium-89 may cause fetal harm when administered during pregnancy and is classified in Pregnancy Category D. Women of childbearing potential should be advised to avoid becoming pregnant.

Because strontium-89 follows the same metabolic pathways as calcium, there is a potential for a competitive interaction between the two agents at the sites of bone turnover. As a precautionary measure, patients should discontinue calcium medications for about two weeks prior to receiving strontium-89.

The beta emissions from strontium-89 have a range of approximately 8 mm in soft tissue and cannot travel out of the body. The risk to health care personnel and household contacts is minimal; nevertheless, like other radioactive drugs, strontium-89 must be handled with care and appropriate safety measures taken to minimize radiation risks. The drug is administered by physicians who are licensed to handle radiopharmaceuticals. Because the level of radioactivity is very low, patients can interact with family members and engage in normal daily activities.

Strontium-89 is usually administered on an outpatient basis. The recommended dose is 4 mCi, administered by slow intravenous injection over one to two minutes. More rapid injection (i.e., less than 30 seconds) may result in a flushing sensation. Repeated administrations of the drug should be based on the patient's response to therapy, current symptoms, and hematologic status, and are generally not recommended at intervals of less than 90 days.

Strontium-89 chloride is supplied in a 10-ml vial containing 4 mCi of the drug.

Agent for opiate dependence

Levomethadyl acetate hydrochloride (ORLAAM-BioDevelopment), also known as levo-alpha-acetylmethadol hydrochloride (LAAM), is a synthetic opiate agonist that is structurally related to methadone (Dolophine). LAAM is the designation for the new agent that has been used most commonly and that will be employed in this discussion.

Although LAAM exhibits the analgesic and other actions that are characteristic of the opiate agonists, the specific indication for its use is the management of opiate dependence, and it is dispensed only by treatment programs approved by the FDA, the Drug Enforcement Administration, and the designated state authority.

LAAM acts via two mechanisms in the management of opiate abuse. First, it cross-substitutes for opiates of the morphine-type and suppresses symptoms of withdrawal in opiate-dependent individuals. Second, chronic oral administration of LAAM can produce sufficient tolerance to block the subjective "high" of usual doses of parenterally administered opiates.

LAAM undergoes first-pass metabolism to its demethylated metabolite nor-LAAM, which is sequentially N-demethylated to dinor-LAAM. These metabolites are also opioid agonists and are more potent than the parent drug. The opioid effect which occurs when

LAAM is administered is slower in onset (two to four hours) and longer in duration (48 to 72 hours) than that of methadone (usual duration of 24 hours). The long duration of action of LAAM permits three-times-weekly administration that eliminates the need for daily clinic attendance for the administration of methadone and/or the need for take-home medication, the major source of street methadone diversion. Investigators have reported that some patients treated with LAAM may experience less variation in opioid effects and have less drug craving than with methadone.

The slow onset of action of LAAM makes it less subject to abuse by addicts seeking an immediate "high." In addition, because LAAM requires biotransformation in the liver to exert its full clinical effects, it acts more quickly when taken by mouth than if it was injected, thereby reducing its potential for intravenous abuse.

LAAM is intended for use as part of a comprehensive treatment plan that also includes appropriate medical evaluation, treatment planning, and counseling. The therapeutic goal early in treatment is to reduce illicit opioid use, and the new agent was found to be comparable to treatment with methadone in attaining this goal in the controlled clinical trials. The use of LAAM or methadone in the treatment of opiate dependence is employed with the hope that it will eventually be possible to discontinue the use of the narcotic; however, for many individuals this hope is not fulfilled, and treatment is continued indefinitely.

Like the other opiate agonists, LAAM may cause central nervous system effects, and impair the mental and/or physical abilities required for the performance of potentially hazardous tasks such as driving a car or operating machinery. Although most patients do not experience such impairment, patients treated with LAAM should be warned not to engage in such activities if their alertness and behavior are affected, and also about the risk of interactions with other central nervous system (CNS) depressants including alcohol. Tolerance and physical dependence will develop upon repeated administration and, because of its potential for abuse, LAAM is classified in Schedule II under the Controlled Substances Act.

LAAM is usually administered three times a week, either Monday-Wednesday-Friday or Tuesday-Thursday-Saturday. These two schedules include a 72-hour inter-dose interval following the Friday and Saturday doses, respectively. If withdrawal is a problem during this longer interval, the dose administered prior to the 72-hour interval may be increased, or small supplemental doses of methadone may be given. In some cases, an every-other-day schedule may be preferable. LAAM must not be used on a daily basis, and usual doses must not be given on consecutive days because of the risk of overdose.

Because of LAAM's slow onset of action, patients will not feel the full effects of the medication for at least several days, and they should be warned that the use or abuse of other psychoactive drugs, including alcohol, may result in serious, and even fatal, complications. Patients must also understand the importance of complying with the dosage regimen and that the drug should not be used on a daily basis because of the risk of excessive accumulation and overdosage.

LAAM is supplied in an aqueous solution containing 10 mg of the drug per ml. This solution should always be diluted before administration and should be mixed with diluent prior to dispensing. To avoid confusion between prepared doses of LAAM and methadone, the liquid used to dilute LAAM should be a different color from that used to dilute methadone in any specific clinic setting.

Antihistamine

Loratidine (Claritin-Schering) joins terfenadine (Seldane) and astemizole (Hismanal) in a group of antihistamines that are considered to be nonsedating. Although structurally related to azatidine (Optimine), the new agent more selectively antagonizes peripheral histamine H_1-receptors and is not likely to cross the blood-brain barrier and cause central nervous system effects (e.g., drowsiness, dizziness) or anticholinergic effects. Loratidine is indicated for the relief of nasal (e.g., runny nose) and non-nasal (e.g., itchy eyes) symptoms of seasonal allergic rhinitis (hay fever). In the clinical trials, it was demonstrated to be as effective as clemastine (Tavist) or terfenadine in relieving the symptoms of allergic rhinitis.

The adverse reactions most commonly reported with the use of loratidine in the clinical studies include headache (12 percent), somnolence (eight percent), fatigue (four percent), and dry mouth (three percent). However, the incidence of these effects was similar in patients receiving placebo.

It has recently been recognized that terfenadine and astemizole have the potential to cause serious cardiovascular effects, including torsades de pointes and other ventricular arrhythmias, although such reactions have been reported very infrequently. These reactions have been associated with elevated concentrations of the antihistamines that could result from use of higher-than-recommended doses, slower metabolism due to significant hepatic dysfunction, and/or interactions with other drugs such as ketoconazole (Nizoral), itraconazole (Sporanox), erythromycin, and clarithromycin (Biaxin), which may inhibit the metabolism of the antihistamine. The increased concentration of the antihistamine may lead to prolongation of the QT interval and associated complications.

To date, there have been no reports of torsades de pointes type of arrhythmias in the experience with loratidine and, in one study in which loratidine was administered in a dose (40 mg) that is four times that which is currently recommended for a period of 90 days, there was no significant QT prolongation seen on the electrocardiograms (ECGs). Although such a reaction with the use of loratidine cannot be excluded, the new drug appears to be less likely than terfenadine and astemizole to be implicated in these problems.

Loratidine undergoes extensive first-pass metabolism and is primarily converted to an active metabolite, descarboethoxyloratidine, which has a longer elimination half-life than the parent compound. Food has been reported to delay the time to peak plasma concentration; it is, therefore, recommended that loratidine be administered on an empty stomach.

The concomitant administration of ketoconazole has been reported to increase the plasma concentration of loratidine and its active metabolite. However, no changes were noted on the ECGs, and there were no significant differences in clinical adverse events between loratidine groups with or without ketoconazole.

The recommended dosage of loratidine in adults and children 12 years of age and older is 10 mg once a day on an empty stomach. Astemizole is also administered once a day whereas terfenadine is usually administered twice a day. The antihistaminic action of loratidine begins within one to three hours after administration, reaches a maximum at eight to 12 hours, and lasts longer than 24 hours. The prompt onset of action of loratidine provides an advantage over astemizole which has a slow onset of action that may result in a delay in reaching its maximum effect. When astemizole therapy is discontinued, the action of the drug persists for an extended period of time, and the continued action of the drug must be recognized if allergen skin tests are to be conducted. However, after cessation of loratidine treatment, there is not a prolonged suppression of allergen skin testing.

Loratidine tablets are supplied in a 10-mg potency.

Are Broad-Spectrum Antibiotics the Best Choice?

Based on efficacy and safety, most patients with common infections like otitis media, sinusitis, bronchitis, and pharyngitis do not require new broad-spectrum antibiotics such as Augmentin (amoxicillin/clavulanate), Ceclor (cefaclor), Ceftin (cefuroxime), or Suprax (cefixime) as initial therapy. Diarrhea, gastrointestinal distress, and yeast infections are common side effects of broad-spectrum antibiotics. Frequently, other agents will cure the patient at a fraction of the cost.

Otitis media

Based on efficacy and safety, amoxicillin is the drug of first choice for the treatment of acute otitis media. Most patients respond to this treatment. An uncommon exception to this rule is the treatment of a suspected resistant organism. If there is suspected resistance, consider: Bactrim (trimethoprim/sulfamethoxazole), Pediazole (erythromycin/sulfisoxazole), Ceclor, Augmentin, Ceftin, or Suprax.

Sinusitis

Acute, uncomplicated sinusitis is most commonly caused by organisms typically sensitive to amoxicillin. However, if there is suspected resistance, consider: Bactrim, Ceclor, Augmentin, or Lorabid (loracarbef).

Bronchitis

Acute bronchitis in a non-smoker under age 45 is usually due to a virus and is occasionally caused by *Mycoplasma pneumoniae*. Appropriate therapy includes no prescription drug therapy (for viral infections) or E-Mycin (erythromycin).

Acute bronchitis in those over age 45 or among smokers is most commonly caused by organisms typically sensitive to amoxicillin such as *H. influenzae* or *S. pneumoniae*. Those who have chronic obstructive pulmonary disease may also be commonly infected with *B. catarrhalis*, which responds to Achromycin (tetracycline) or Bactrim.

Pharyngitis

Acute, uncomplicated pharyngitis is most commonly caused by a viral infection, and patients will not benefit from antibiotic therapy. In contrast, patients with Group A beta-hemolytic streptococcus (strep throat) should be treated with an antibiotic such as penicillin to prevent the complication of rheumatic fever. Broader-spectrum antibiotics are no more effective than penicillin in treating strep throat. If there is a known or suspected allergy to penicillin, consider: E-Mycin, Biaxin (clarithromycin), or Zithromax (azithromycin).

A note on costs

For most common infections, broad-spectrum antibiotics are neither superior nor required, and cost much more than other available antibiotics. Sophisticated, expensive antibiotics are becoming first-line therapy, even where they may be unnecessary or insufficient treatment.

A list of commonly prescribed antibiotics and their costs is provided in the chart on the next page. For a free pocket card or wall chart version of this information, contact the Society's Center for Professional Drug Education and Information at (800) 228-7823 or (717) 558-7750. Pocket cards and wall charts are also available on nonsteroidal anti-inflammatory drugs and quinolone antibiotics.

Sources available upon request.

HID NAMED PARTNER IN DUR PROGRAM

The federal Omnibus Budget Reconciliation Act (OBRA) of 1990 requires each state to develop a comprehensive drug use review (DUR) program for its Medical Assistance (MA) program. The core of this requirement involves educational outreach activities that are designed to promote medically appropriate and cost-effective prescribing, dispensing, and utilization of prescription medications.

The Pennsylvania Department of Public Welfare (DPW) has contracted with the Pennsylvania Medical Society to manage educational outreach activities under the Pennsylvania Medicaid Retrospective DUR Program. The Society's Department of Professional Drug Education and Information was created to implement this contract. DPW has also contracted with Health Information Designs, Inc. (HID), a firm with many years of experience in DUR, to work with the Society on this program.

In addition, DPW has established a DUR Board, composed of Pennsylvania-licensed physicians and pharmacists, to provide oversight and expert clinical input concerning this DUR program.

The Pennsylvania Retrospective DUR Program will have two basic components: one focused on the drug utilization of individual Medicaid recipients, and a second oriented toward the prescribing habits of physicians.

Recipient profiles

The recipient-specific monitoring program is often referred to as "therapeutic drug utilization review." The goal is to communicate with providers about drug therapy regimens of individual Pennsylvania Medicaid recipients which appear to place specific Medicaid recipients at clinically significant risk for drug-induced illness or other adverse outcomes.

The review process consists of six basic steps:

1) update recipient drug and medical claim histories*;

2) perform computer analysis of recipient histories using clinically based, peer-reviewed therapeutic criteria*;

3) generate "profiles" for recipients who except under one or more therapeutic criteria*;

4) review of profiles by specially trained pharmacists to confirm their clinical significance*;

5) review of profiles by DPW staff and the Society's clinical staff and physician advisors; and

6) mail alert letters and copies of recipient profiles to the physician(s) who prescribed the drugs involved in the potential problem therapy. The letters are intended solely to provide the treating physicians with information to be used at their discretion in the ongoing care of the Medicaid recipient. A postage-paid reply envelope is included with each letter for the physician to use in making a voluntary response or to seek additional information from the DUR program's clinical staff.

Physician profiling/education

This retrospective DUR program component provides physicians with clinically oriented, unbiased education concerning classes of medications. Under this program, physicians' Medicaid prescribing records will be analyzed periodically using a series of clinically based criteria. These criteria will encompass tests for the medical appropriateness and cost effectiveness of prescribing for several key therapeutic drug categories.

HID generates profiles for each physician who may benefit from education about one or more drug classes. These profiles are reviewed by licensed physicians and pharmacists to confirm their clinical significance. The Society will offer physicians education on these classes of medication through various methods, including mailed materials and face-to-face discussions.

The key focus of both of these DUR program components is to provide physicians with information that will allow them to make more fully informed decisions in caring for Pennsylvania Medicaid recipients.

Opportunities for physician input

Physician input is critical to the ongoing success of this type of program. We encourage you to call or write with your comments and suggestions. We hope that you will use the response mechanisms included with each educational intervention to provide the Society with your reactions to this program.

The Society and HID will also be scheduling a series of workshops around the commonwealth to give you an opportunity to learn first hand how the program works. We look forward to seeing you at one of these workshops.

**performed by HID*

Natalie A.Harley, director of the Society's Department of Professional Drug Education and Information, contributed to this page.

Antibiotic Therapy: Cost of 10 Days for an Adult Patient

BRAND NAME	GENERIC NAME	ADULT DOSING	QUANTITY	BRAND COST	GENERIC COST
Achromycin	Tetracycline	250 mg QID	40	$ 3.91	$ 4.27
Amoxil	Amoxicillin	500 mg TID	30	$ 15.12	$10.74
Bactrim DS	Trimethoprim/ Sulfamethoxazole	160 mg/ 800 mg BID	20	$ 20.73	$ 8.75
E-Mycin	Erythromycin	250 mg QID	40	$ 12.20	$ 8.70
Pen-Vee-K	Penicillin V Potassium	250 mg QID	40	$ 6.08	$ 5.13
Alternative Therapies:					
Augmentin	Amoxicillin/ Clavulanate	500 mg TID	30	$ 74.75	NA
Biaxin	Clarithromycin	250 mg Q12	20	$ 48.01	NA
Ceclor	Cefaclor	250 mg TID	30	$ 60.38	NA
Ceftin	Cefuroxime	250 mg BID	20	$ 61.20	NA
Cipro	Ciprofloxicin	500 mg BID	20	$ 61.45	NA
Lorabid	Loracarbef	400 mg Q12H (2 CAPS)	40	$123.96	NA
Suprax	Cefixime	400 mg QD	10	$60.15	NA
Zithromax**	Azithromycin	250 mg QD	6	$44.05	NA

Notes

Cost = Average wholesale price plus $3.00 dispensing fee.
Dosage and duration may have to be adjusted for disease severity, age, and/or co-morbid conditions.
NA = not available.
** = 5 days of therapy.

This comparative table was assembled by Health Information Designs, Inc. (HID)—a firm specializing in drug utilization review, based in Fairfax, Virginia—who is a partner in the Pennsylvania Medicaid Retrospective DUR program. Copyright 1993, The Prescription Drug Education Project.

Governmental Antitrust Policy: Soon Obsolete?

Leo Uzych, JD, MPH

Six antitrust enforcement policy statements issued in 1993 raise many valid concerns for physicians. This article describes and analyzes two of those statements most important to '90s physicians.

Physician efforts in the past to construct networks have been impeded in part by wide-ranging concerns that such endeavors may run afoul of extant antitrust laws. Although the body of antitrust law does not entirely cut off the flow of physician-organized networks, these laws do limit the contours of lawful organizations.

Statements of Antitrust Enforcement Policy in the Health Care Area, issued in September 1993 by the U.S. Department of Justice and the Federal Trade Commission, are broadly intended to provide education and instruction to the health care community regarding antitrust enforcement policies affecting mergers and various joint activities in the health field. The six policy statements are similarly designed to assuage gnawing feelings of antitrust uncertainty which may otherwise impede cost-conscious mergers and joint ventures. Guidance is provided in the form of so-called "antitrust safety zones," which etch the boundaries within which the pertinent governmental agencies will not challenge conduct as allegedly violative of applicable antitrust strictures.

The present time, of course, is one of great uncertainty in the health area. Indeed, President Clinton has drafted a plan for health reform broadly comprising "health alliances," and which augurs substantially embellished governmental control over health care financing and delivery. If a health care system tightly regulated by the government in fact comes to pass, then the recently promulgated Statements of Antitrust Enforcement Policy may rapidly become atavistic. Yet, their present existence raises concern to physicians.

Mr. Uzych is an attorney specializing in health law based in Wallingford.

Physician network joint ventures

One of the statements pertains particularly to enforcement policy affecting physician network joint ventures. As defined in the policy statement, a "physician network joint venture" is a physician-controlled venture that markets jointly the services of member physicians. An introduction to the statement points out that such entities, because of their potential for providing quality services at reduced prices, contain the seeds of "significant procompetitive benefits" for medical consumers.

The policy statement then sketches an "antitrust safety zone," describing physician network joint ventures that will not be challenged, absent "extraordinary circumstances," by the government. The safety zone reaches to physician network joint ventures comprised of 20 percent or less of the physicians in each physician specialty with active hospital staff privileges who practice in the relevant geographic market and share "substantial financial risk." This safety zone is applicable equally to "exclusive" physician network joint ventures, which "significantly" restrict the ability of members to affiliate with other physician network joint ventures and contract individually with health insurance plans, and "non-exclusive" physician network joint ventures, which do not impose significant restrictions on members desiring to contract with other entities.

As the swelling wave of health system reform descends, it almost certainly will encompass the theory of managed competition. The efficacy of the size limitations imposed by the antitrust safety zone for physician network joint ventures will be affected by whether, and to what degree, the limits mesh with the practical realities enveloping managed competition.

Data presented last year in a *New England Journal of Medicine* article† suggest that the limits may mesh poorly with such realities. The authors assumed ("somewhat arbitrarily") that at least three health

plans are needed to support "healthy competition." Based in part on this assumption, they estimated that at least 1.2 million persons would be required to support three HMOs capable of providing almost all services. However, only 42 percent of the U.S. population resides in markets with populations of more than 1.2 million.

This example indicates that the size limits mandated by the antitrust statement will make it quite difficult to construct qualifying networks in the more sparsely populated parts of the country. Generally, the economic efficiency of a network will increase as the number of patients increases, which in turn will require an increase in the number of physicians to provide needed services. In smaller population centers, it may not be possible for a network to assemble a sufficiently large number of physicians and still fall within the size limits mandated by the antitrust statement.

The 20 percent size limit is plainly a thorn in the flesh of physician networks: "Non-exclusive" networks cannot readily seize market power or artificially raise prices, whereas an "exclusive" network may be empowered to exert market power and raise prices.

One possible solution is to create two size limits: a higher size limit for non-exclusive networks, and a smaller size limit for exclusive networks. This type of two-layered mechanism may facilitate the development of networks even outside major urban areas.

Physicians' provision of information to purchasers of health care services

Another of the recently issued statements establishes an antitrust safety zone describing collective physician provision of information that will elude antitrust challenge, absent extraordinary circumstances. In particular, the zone provides that physicians' "collective" provision of "underlying medical data" that may "improve" purchasers' resolution of issues relating to the "mode, quality, or efficiency" of treatment is "unlikely" to raise any "significant" antitrust concern.

The statement, however, provides specifically that the antitrust safety zone does not extend to physicians' "collective" provision of "fee-related" information to purchasers. A stated rationale for this posture is that such conduct can raise antitrust concerns to the extent that it "signals or facilitates" physicians' "collective price demands." Thus, competing physicians who seek to negotiate fees with a purchaser run a "substantial" antitrust risk and an "even greater" risk if they "implicitly or explicitly" threaten to boycott or actually boycott a purchaser not willing to acquiesce to "suggested" fees.

The wisdom of this safety zone, in some respects, is open to question. Existing case law recognizes that collective development of fee-related information by physicians does not necessarily constitute an antitrust violation, especially when the involved physicians merely pass along their views to payers, do not agree to "fix" prices, and do not boycott or threaten to boycott recalcitrant payers. Yet, the statement as presently constructed not only eschews a safety zone for the collective provision of fee-related information to purchasers, but also bluntly warns that such conduct may ignite antitrust concerns.

The strident mentality revealed by the agencies in this respect is particularly perplexing since another statement creates an antitrust safety zone extending an umbrella of protection over the exchange of price and cost data by hospitals. The agencies, according to the statement, will not challenge, absent extraordinary circumstances, hospital participation in written surveys of prices for hospital services or wages, salaries, or benefits of hospital personnel, provided certain conditions are met.

The disparate treatment sanctioning hospital participation in exchanges of price and cost information yet abhorring physicians' collective provision of fee-related data to purchasers has no obvious legal or economic logic. Physicians, akin to hospitals, have a legitimate need to appropriately adjust prices as market conditions evolve. Moreover, there are about 700,000 physicians in America and only about 5,000 non-federal hospitals. This suggests that, if anything, the risk of this kind of anticompetitive behavior by hospitals is greater than the risk of such behavior by physicians.

Thoughts for the future

Although prevailing political winds may change direction abruptly, current winds seem to portend substantial changes in our present health care system. The current Statements of Antitrust Enforcement Policy already raise many physicians' concern, and if a highly regulated health care system under the thumb of government eventually evolves, then they may well be rendered inappropriate and obsolete. ⬡

"Physicians, akin to hospitals, have a legitimate need to appropriately adjust prices as market conditions evolve."

THE ODDS ARE GETTING LONGER!

Vital momentum seems to be draining from the health system reform proposal introduced by Governor Robert P. Casey a year ago. The Casey plan was presented as a five-bill package in the Senate, but the House of Representatives only got one of the bills—the health care alliance proposal known as the Health Security Plan.

The keys to loss of momentum are seen as slowness of the Congress to act on national proposals—thus failing to send a clear signal on the type of plan to develop on the state level—and the replacement of Senator Hardy Williams (D-Philadelphia) as chairman of the Senate Public Health and Welfare Committee. Senator Williams is prime sponsor of the Casey bills, but the Senate is now under Republican control.

Casey supporters do possess, however, some lingering hope for success. The General Assembly is in session until the end of November, and if Congress does act this summer, a Pennsylvania bill could be moved through the state House and Senate quickly this fall.

There has also been discussion behind the scenes on individual bills in the package, including medical liability reform, insurance consumer reform, and self-referral restrictions. The Society has been an active participant in these discussions, and the individual bills could be considered in this session.

For more information, call the Society's Department of Legislative Affairs at (800) 228-7823 or (717) 558-7750.

The author, Larry L. Light, is the Society's director of legislative affairs.

PHYSICIANS VIE FOR LOCAL POLITICAL CLOUT

According to various media reports and AMA sources, a growing number of physicians are tossing their hats into the political ring this year. One national paper reported that at least 43 physicians are seeking House and Senate seats.

In Pennsylvania, three physicians ran unsuccessfully for party nominations during the May primaries:

- John F. Perry, MD, of Mill Hall, Clinton County, an orthopedic surgeon, ran for governor in the Republican primary.
- John Karlavage, MD, of Williamsport, Lycoming County, a general practitioner, was one of three Democrats challenging incumbent Congressman Joseph McDade.
- Joseph Rudolph, MD, of Library, Allegheny County, an allergist with a subspecialty in emergency medicine, was one of seven candidates running on the Democratic ticket for incumbent Republican Congressman Rick Santorum's seat. Santorum ran for the U.S. Senate seat held by Harris Wofford. Dr. Rudolph is a State Society member.

In related news, David Worthington, son of State Society member John J. Worthington, MD, of Willow Grove, Montgomery County, will run in the general election as an Independent for governor.

AMA BOARD APPROVES UNIVERSAL ACCESS APPROACH

The AMA Board of Trustees in April approved the association's major advocacy initiative, which presents one approach to achieve universal coverage for and access to health services.

The approach incorporates:

1) an employer mandate for firms with 100 or more employees;

2) an individual mandate with affordable sliding-scale subsidies for individuals in firms with less than 100 employees;

3) a health IRA as an additional mechanism to complement the employer/individual mandate; and

4) a phase-in mechanism established at the time reform legislation is enacted.

This advocacy initiative is based on long-standing AMA policy reflected in Health Access America, and the AMA's most recent proposal for action, "Providing Health Coverage for All Americans."

The initiative represents the framework of a desirable approach, but also recognizes that as the congressional debate unfolds, flexibility will be needed in determining the relative responsibilities of individuals, employers, and government to ensure universal coverage for and access to a standard set of health care benefits for all Americans.

This report also highlights that the AMA believes universal coverage and access to health care services are *not* in conflict but must be pursued simultaneously under health system reform legislation.

RADIO ADS SUPPORT MALPRACTICE REFORMS

Radio advertising supporting federal malpractice reforms is being aired in several states by the Health Care Liability Alliance, of which the AMA is a member.

The ads are running in the congressional districts of key members of Congress who deal with liability reform. In Pennsylvania, the ad aired in the legislative district of Representative Marjorie Margolies-Mezvinsky (D-Montgomery).

The text of the ads follows a similar script to the "Harry and Louise" television ads of the Health Insurance Association of America. The liability alliance's characters, "Larry and Mary," converse as follows:

Larry: Hey Mary, a $2 million plus jury award in my malpractice case...My client gets less than half. I get about $750,000...

Mary: Shh, Larry, people in Washington might hear. That could wreck our gravy train. Remember, 28 states already limit malpractice fees for lawyers and have made the system fairer.

Larry: You're right, Mary, this is one boat we don't want Congress to rock. (ambulance siren...) Gotta go...

Narrator: There can be no health care reform without liability reform. Call your congressman today. Let's change the rules and make the liability system better.

Call the Health Care Liability Alliance at 1-800-REFORM-1 for information.

AMA KICKS COMMUNICATIONS PLAN IN HIGH GEAR

AMA President James S. Todd, MD, in mid-May outlined the association's latest communications program, designed to utilize the strength of the federation to deliver medicine's message in the national debate over health system reform. He told the federation that, "The intensive national campaign is to make sure that our message is heard clearly and unmistakably by the Congress, the administration, the media, and the public."

Major activities include:

• On May 12, the AMA published an advertisement in the *Washington Post* attacking major health insurers' opposition to antitrust reforms as a part of health system reform. The ad was headlined, "What are they afraid of?" The AMA is calling for enactment of the Hatch-Archer bill (Senate Bill 1658/House Rule 3486), which provides antitrust relief for physicians.

• At the same time, the AMA sent a letter to every member of Congress, again voicing support for Hatch-Archer and making basically the same points contained in the advertisement. Every state medical society and most major national specialty societies signed on to this strongly worded letter, which states that "The undersigned organizations want to clear away the insurance companies' smoke screen and refute scurrilous arguments" regarding the AMA's antitrust relief legislation.

• Also on May 12, AMA Vice Speaker Richard Corlin, MD, testified before the Senate Labor Committee on antitrust reform, also supporting the Hatch-Archer legislation.

• On May 13, the AMA conducted a conference call with all 50 state medical societies to provide further details on activities, and to solicit support to maximize the impact of the campaign.

• The AMA held a press conference in Washington, DC, on May 23 to announce the "Patient Protection Act"—legislation to assure patient choice of physician in any type of managed care setting. Another ad appeared in the *Washington Post* that day, calling for support of this legislation, headlined: "What you don't know CAN Hurt You—That's why Congress MUST pass the Patient Protection Act."

• During the week of May 16, the AMA sent a letter to every physician and medical student in the U.S., to involve physicians at the grassroots in a campaign to build congressional support for the Patient Protection Act. The letter offered physicians the opportunity to send messages to the representative from their district and both senators from their state by placing a single phone call. It also encouraged personal contact with representatives in Congress in support of the act.

• Grassroots campaigns were also launched among the AMA POWER Network, the AMA Alliance, and interested physicians. These are to be complemented by a patient grassroots campaign, with physician office distribution of a brochure with letters to Congress, an 800 number for patients to call, and formation of a PATIENT POWER network. One goal was to arrange a one-on-one meeting in every congressional district during the Memorial Day recess to discuss the Patient Protection Act.

According to the AMA, the results of recent surveys, showing that the public believes physicians are the most important source of information on health system reform, demonstrate beyond a doubt that medicine's efforts are achieving significant results.

Just don't have the time to deal with finding/selling/replacing/updating things in your office?

YOCON®
YOHIMBINE HCl

Description: Yohimbine is a 3a-15a-20B-17a-hydroxy Yohimbine-16a-carboxylic acid methyl ester. The alkaloid is found in Rubaceae and related trees. Also in Rauwolfia Serpentina (L) Benth. Yohimbine is an indolalkylamine alkaloid with chemical similarity to reserpine. It is a crystalline powder, odorless. Each compressed tablet contains (1/12 gr.) 5.4 mg of Yohimbine Hydrochloride.

Action: Yohimbine blocks presynaptic alpha-2 adrenergic receptors. Its action on peripheral blood vessels resembles that of reserpine, though it is weaker and of short duration. Yohimbine's peripheral autonomic nervous system effect is to increase parasympathetic (cholinergic) and decrease sympathetic (adrenergic) activity. It is to be noted that in male sexual performance, erection is linked to cholinergic activity and to alpha-2 adrenergic blockade which may theoretically result in increased penile inflow, decreased penile outflow or both.

Yohimbine exerts a stimulating action on the mood and may increase anxiety. Such actions have not been adequately studied or related to dosage although they appear to require high doses of the drug. Yohimbine has a mild anti-diuretic action, probably via stimulation of hypothalmic centers and release of posterior pituitary hormone.

Reportedly, Yohimbine exerts no significant influence on cardiac stimulation and other effects mediated by B-adrenergic receptors, its effect on blood pressure, if any, would be to lower it; however no adequate studies are at hand to quantitate this effect in terms of Yohimbine dosage.

Indications: Yocon® is indicated as a sympathicolytic and mydriatric. It may have activity as an aphrodisiac.

Contraindications: Renal diseases, and patient's sensitive to the drug. In view of the limited and inadequate information at hand, no precise tabulation can be offered of additional contraindications.

Warning: Generally, this drug is not proposed for use in females and certainly must not be used during pregnancy. Neither is this drug proposed for use in pediatric, geriatric or cardio-renal patients with gastric or duodenal ulcer history. Nor should it be used in conjunction with mood-modifying drugs such as antidepressants, or in psychiatric patients in general.

Adverse Reactions: Yohimbine readily penetrates the (CNS) and produces a complex pattern of responses in lower doses than required to produce peripheral a-adrenergic blockade. These include, anti-diuresis, a general picture of central excitation including elevation of blood pressure and heart rate, increased motor activity, irritability and tremor. Sweating, nausea and vomiting are common after parenteral administration of the drug.[1,2] Also dizziness, headache, skin flushing reported when used orally.[1,3]

Dosage and Administration: Experimental dosage reported in treatment of erectile impotence.[1,3,4] 1 tablet (5.4 mg) 3 times a day, to adult males taken orally. Occasional side effects reported with this dosage are nausea, dizziness or nervousness. In the event of side effects dosage to be reduced to ½ tablet 3 times a day, followed by gradual increases to 1 tablet 3 times a day. Reported therapy not more than 10 weeks.[3]

How Supplied: Oral tablets of Yocon® 1/12 gr. 5.4 mg in bottles of 100's NDC 53159-001-01 and 1000's NDC 53159-001-10.

How to Thrive in a Capitated Environment

The key to thriving—and not merely surviving—in a capitated environment is knowing key aspects of your practice's finances first-hand before accepting a managed care arrangement. Critical business decisions in today's managed care environment can no longer be based on a physician's intuition or a group's overall impression of what the practice can handle.

At the most basic level, knowing the financial ABCs of your practice includes calculating your costs on a per-member, per-procedure, and per-month basis. While obtaining these figures is not complex, it may require retooling your practice's information systems to access the information.

Organizing key financial data is the first step to obtaining actual knowledge of how your practice operates. Once armed with this baseline information, you can then determine whether a managed care plan's terms—from reimbursement fees to administrative details—are acceptable. Translating practice management information into comparable managed care terms will not only enable you to position your practice now, but for the future.

Revenue analysis: To determine whether a capitation arrangement will be profitable for your practice, you first need to evaluate your practice's current revenues. Compiling a productivity report, essentially a 12-month spreadsheet, will provide a summary showing each month's charges, adjustments to charges, collections, and capitation income for each payer and each payer contract.

Be sure to distinguish between payer and payer contract, since an arrangement from Blue Cross may include a traditional indemnity plan, a preferred provider organization (PPO), and a health maintenance organization (HMO). The spreadsheet should include the year-to-date totals, the previous year's comparison, and the accounts receivable aging.

This information provides an immediate comparison and quick analysis of which programs are providing adequate revenues and which should be reduced or possibly discontinued. Many practices participate with 15 or 16 plans—but actually receive income from only four or five. You might want to question what to do with those other nine or 10 plans that are clogging up your files and not providing you with much revenue.

Segment analysis: As part of your effort to organize practice management data, include a segment analysis that presents the different types of services and procedures provided by your practice and the volume of each in total and by payer. This report should list examinations, consultations, surgical cases, and post-operative visits, as well as a summary by diagnosis.

Developing a segment analysis will help you determine how a particular plan's enrollees compare to your current patient population. For example, if a high percentage of a plan's patients are diabetic, utilizations are likely to be higher and resulting profits will be lower. This information will be very helpful in determining whether or not you will be able to continue accepting patients from a particular payer and may give you the ability to negotiate a more appropriate rate with the managed care organization.

Patient demographic data: Similar to the segment analysis, a summary of demographic data, including age, sex, ethnic origins, zip codes, and household income, provides another baseline by which to compare the existing demographics of your patients to those of a new plan. This comparison will also serve as a good indication of potential utilization rates.

Referrals out: Include a report that summarizes the number and types of diagnoses "farmed out" to other physicians. This will give you an indication of how many referrals you are making and the type of specialty to which they are directed.

The Health Care Group

Calculating fees

Before you can begin to compete on prices, you need to know your practice's operating costs. To determine whether capitation rates or other forms of reimbursement are adequate, have a clear understanding of physician and staff salaries per procedure, as well as other overhead costs, including tests performed. While this may be initially time-consuming, once the system is in place, keeping track of costs is fairly easy.

The steps below show you one way to determine if a capitation contract is profitable. This method assumes a fairly tight correlation between the fees for a procedure, and the work and overhead included. If there is no such correlation, there are other, more exact methods available.

To calculate your average cost:

1) Compile your total expenses from the most recent fiscal year. These should include staff and physician salaries and bonuses.

2) Compile the total charges for services rendered during the most recent fiscal year. If you cannot obtain this information by date of service, compile all services billed in that fiscal year.

3) Compute this information into a "cost-to-charge" ratio, by dividing total practice expenses by total charges. This will tell you what percent of each dollar charged goes to covering practice costs.

4) For each procedure you perform, calculate the minimum charge as the usual and customary fee by the ratio of cost-to-charges. This will tell you the lowest amount you can accept for this service to still cover your costs.

Evaluating capitation agreements

Following a similar procedure will provide a clear way to evaluate the profitability of a proposed or existing capitation agreement:

1) Compile a list showing how many procedures you perform under a capitated plan.

2) For each procedure, multiply the number performed by the minimum charge.

3) Add up all the figures produced in step 2 for all procedures performed. This total is the minimum you would have charged for services performed if you billed them at an average cost.

4) Compare the total from step 3 with the total capitation payment received during the year. If the capitation is greater than the total average charges, you are profiting with the agreement. If the capitation is less than the total average charges, you are not covering your average costs. Further research may be needed by your accountant or adviser to determine if you should continue under such a capitated agreement.

Preparing for negotiations

Retooling your practice's information systems to institute accrual accounting systems, organizing claims analyses, or measuring outcomes are necessary prerequisites to any negotiations with managed care organizations. Accepting a reimbursement arrangement without knowing your own cost parameters only reduces your negotiating leverage and potential for profitability in a managed care environment.

Society Publications Address Personnel, Employment Issues

If physicians have questions about their role as an employer or an employee, they can turn to two publications from the Pennsylvania Medical Society. Both are written by respected health care attorneys, and are easy to read and use.

"Employment Contracts: A Guide for Pennsylvania Physicians" answers many of the legal, professional, and personal questions that arise when contemplating contracting from both the employer and employee perspectives. It is discount priced at $40 for Society members; the price is $60 for nonmember physicians and non-physicians.

"Employment Law: A Guide for Pennsylvania Physicians" is the best guide to government laws and regulations affecting physicians who are employers. The cost of the Employment Law manual is $45 for Society members, $75 for nonmember physicians, and $100 for non-physicians.

To order, or for more information about the manuals, call the Society's Department of Physician Services at (800) 228-7823 or (717) 558-7750.

Patients Are A Virtue

Personnel Considerations in a Practice Merger

Monica M. Murphy

Many doctors have begun discussions with their colleagues about the pros and cons of merging practices. Legal and financial aspects of a merger often overshadow the pragmatic considerations in personnel, but changes in personnel should be discussed, in detail, before a practice merger is finalized to eliminate any surprises or hard feelings.

To begin, the types of employees needed in the newly formed entity must be evaluated, as well as the strengths and weaknesses of current employees. Some groups appoint one or two doctors to perform this task, while others seek outside consultants. Either way, these guidelines can be used to assess personnel effectively.

Define job descriptions

First, define job descriptions for the new entity, and then the appropriate employee can be assigned to each job. During this process, however, you may discover that too many employees are qualified for the same job, or none are qualified for a particular job.

For example, the new entity may require two medical assistants and one nurse; yet, each practice currently employs two nurses. In this case, you have two choices: 1) retain one nurse and hire two new medical assistants, or 2) retain all currently employed nurses. While the added expense of the latter alternative may be worthwhile to maintain patient comfort level, there may be another problem to consider: Many nurses have been with their respective practices long term and are comfortable working with "their doctors" and doing things "their way."

And this is not only true for the clinical staff, but the clerical staff as well. That is why it is crucial for you to discuss personnel issues prior to finalizing an agreement to merge practices. If you commit to forming a new entity, you must also commit to making changes along the way.

Assign job responsibilities

Once the job descriptions have been defined, you can then decide to whom these responsibilities should be assigned. Invest the time and money needed to meet with each staff member to evaluate his or her strengths and weaknesses. Start by asking the employee to describe "a day in the life" at work. Take note of the duties the employee enjoys and those he or she avoids at all costs.

For instance, your office manager may spend more than 80 percent of his or her time following up on overdue patient accounts, and he or she may show no initiative in keeping informed about reimbursement changes or general changes in the health care environment. However, your newly established practice will need someone to be the liaison between you and "the outside world"—someone you depend on for information about your current managed care plans, other third-party payers, operational issues, staffing issues, and general practice management issues.

Since a billing coordinator, not an office manager, should follow up on overdue accounts, the employee who formerly served as your office manager may really be best-suited for a billing coordinator position. Or perhaps your office manager has the ability and desire to be more of an administrator; however, he or she was not given the opportunity to pursue this avenue. An outside adviser could train this employee, and recommend effective training materials and seminars.

Critique each job description and assign a corresponding staff member. You may have some difficult decisions to make at this point, and some compromises may have to be made—cost and efficiency versus staff history. This is not necessarily a negative and should not be viewed that way. If it is decided that all nurses will be retained, even though it would be more cost-effective to replace them with medical assistants, then clarify the reasons why and move on. Do not dwell on the added costs if the majority of doctors don't want to completely overhaul the practice.

Continuity of patient care provided by long-term employees can be helpful for the patients. The less obvious the practice changes are to the patients, the better the transition will flow.

Address employees' perceptions

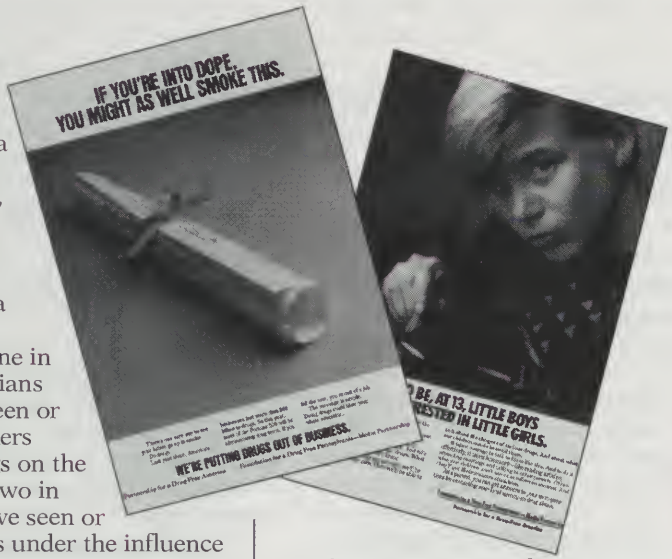
Finally, the employees must believe the changes are for the benefit and long-term stability of the practice. The decision to merge practices should not be viewed as a selfish move on the part of the doctors.

Include certain key personnel during some of the decision-making process. This is not to say that you should allow staff the authority to define new employee roles, but key employees could be given the opportunity to make suggestions. Make your staff members feel like they are a part of the practice, and the results will prove positive.

In summary, do not downplay the importance of personnel changes in the process of merging practices. Your staff is a critical piece to the pie and should be treated accordingly. They may have suggestions that might not cross your mind, yet be vitally important. Thoughtful planning for the legal, financial, and personnel issues will definitely pay off in the long run.

Ms. Murphy is a medical practice management consultant for Professional Practice Consulting, Inc., Wayne.

Anti-Drug Abuse Effort Targets the Workplace



Pennsylvania workers think drugs and alcohol are a problem in their own workplaces, according to a recent Gallup Survey for the Foundation for a Drug Free Pennsylvania. One in four Pennsylvanians surveyed have seen or heard of coworkers using illicit drugs on the job, and nearly two in four say they have seen or heard coworkers under the influence of alcohol while at work, the study found.

The study was presented at the launch of Drugs Don't Work Here (DDWH), a new statewide program from the foundation that will help employers and labor organizations address drug and alcohol abuse in the workplace.

The State Society is a founding member of the foundation, incorporated in 1990 by a coalition of business, labor, and professional organizations in response to a call from Governor Robert P. Casey and Attorney General Ernest Preate Jr., for the private sector to play a larger role in addressing the problem of substance abuse. Lee H. McCormick, MD, State Society hospital medical staff trustee, represents the Society on the foundation's Board of Directors.

Benefits of DDWH membership include discounts on advertising and selected goods and services from other DDWH members. A number of drug testing labs, employee assistance programs, medical review officers, and several medical organizations are offering various discounts to all members who use their services.

The foundation chose the workplace as its initial primary focus for several reasons:

- the need is great, and much needs to be done in this area;
- the vast majority of drug users can be reached through the workplace; and
- substance abuse in the workplace is taking a tremendous economic toll on the nation and the commonwealth.

The foundation's initial approach was to offer a series of seminars to help small and mid-sized employers address substance abuse in a comprehensive manner.

The series of seven seminars was attended by nearly 300 organizations with approximately 140,000 employees. More significantly, a high proportion of employers were motivated to institute, revise, or at least reexamine existing substance abuse policies, employee assistance programs, and/or drug testing programs.

The foundation is addressing one unique workplace separately: schools. The federal Drug Free Schools and Community Act requires any school receiving federal funds to certify that it is a drug-free workplace. The foundation, in conjunction with the Pennsylvania Department of Education, designed a seminar to help school districts understand and comply with the federal requirements.

A second major initiative of the foundation is a statewide anti-substance abuse public service media campaign called the "Foundation for a Drug Free Pennsylvania—Media Partnership." All television station, cable network, radio station, newspaper, and billboard companies across the state have been asked to become "partners" in promoting the foundation's message. The foundation estimates that, in the first nine months of the program, 82,996 ads valued at $1.8 million have been run.

The foundation is funded primarily through contributions from corporations and foundations, and has also received grants from state government.

PUBLIC HEALTH TOPICS POPULAR IN HEADLINES

Keeping up with news in the arena of public health is a difficult challenge for physicians nowadays who are bombarded with an ever-increasing barrage of "instant access" information. As a small help, here's a sample of headlines gleaned from various sources received by the State Society:

- The federal Agency for Health Care Policy and Research has formed a private-sector panel of health care experts and consumers to develop clinical practice guidelines to improve the effectiveness of smoking prevention and cessation programs.
- A federal judge ruled in May that the U.S. constitution guarantees people the right to terminate pregnancies and the right to end their own lives. A U.S. District Court in Seattle struck down a 140-year-old Washington state ban on assisted suicide, saying the law violated 14th Amendment guarantees against state infringement of individual liberty.
- The AMA will call for physicians to disclose their rates in advance to patients and to use the federal RBRVS fee scale as the basis for their fees.
- Wyeth-Ayerst Labs is offering safe-sex kits to providers containing a sample condom and discount coupons.
- The FDA is imposing stricter rules on food labels. The FDA and Department of Agriculture have added the word "healthy" to the list of terms they will regulate. No longer will foods low in fat—like jelly beans—be able to be labeled as healthy.

Emergency Medicine: Ahead of the Rest

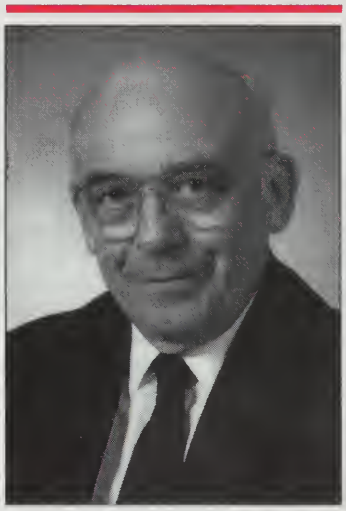
Maureen Hoepfer

George E. Moerkirk, MD, FACS, is director of prehospital emergency medical services and former medical director of aeromedical services at Lehigh Valley Hospital in Allentown. Since the early 1960s, Dr. Moerkirk has been a driving force in statewide efforts to develop and maintain a quality emergency medical services system in Pennsylvania.

George Moerkirk, MD, says that emergency care in Pennsylvania has come a long way since he began practice in the early 1950s. "Back then, we operated on the scoop-and-run principle of prehospital care. There were ambulance services, many of which were run by funeral directors who used their hearses as the transport vehicles for trauma victims. There were no training standards for prehospital providers, the equipment was crude, and really we only provided transportation for the patient. I've seen people put in the back of vans with only a driver taking them to the hospital."

Today, the situation is vastly improved, according to Dr. Moerkirk. Pennsylvania has developed a comprehensive emergency medical services (EMS) system that includes specially trained personnel in both the prehospital and hospital settings, licensed ambulances furnished with the latest technological equipment, a sophisticated communication system, and designated trauma centers.

"I think our greatest accomplishment has been setting up this system of care," he explains. "There is no question that the EMS system has had a significant impact on reducing mortality and morbidity statistics for trauma in Pennsylvania."



Dr. Moerkirk

A costly problem

Trauma is a large, costly problem in the United States. Dr. Moerkirk cites the following statistics published by the American College of Surgeons:

- Trauma is the leading cause of death for persons up to age 40, and the third leading cause of death for Americans overall.
- 45,000 Americans die from trauma each year, and 60 million are injured.
- The costs for treating trauma-related injuries in the U.S. exceed $100 billion each year; this comprises 40 percent of the nation's total annual health care expenditures.

"It's interesting that even though the United States spends billions of dollars on treating trauma victims each year, only four cents of every federal research dollar is spent on trauma research," he adds.

The EMS movement

The push to improve emergency care in the U.S. began in the early 1960s, Dr. Moerkirk says. The National Research Council and the American Academy of Sciences jointly published a paper, "Trauma: The Neglected Disease in Modern Society," which called attention to the deficiencies in emergency medical care. Soon after, Congress passed the Highway Safety Act which included funding to states for programs to train emergency medical technicians and paramedics.

"Around that same time," he says, "Congress also enacted an EMS act which allowed regions within states to organize and apply for grants to implement basic and advanced emergency medical services systems. Pennsylvania succeeded in obtaining a large number of these grants." He adds that a number of regional EMS councils de-

Ms. Hoepfer is a marketing associate for the Society's Educational and Scientific Trust. This article is one in a series, begun in January 1993 and ongoing through 1994, sponsored by the Trust's endeavor to address public health needs, Keystones of Public Health.

veloped in Pennsylvania as a result of this act, including the Eastern Pennsylvania Regional Council. Dr. Moerkirk helped to organize the council in 1972 and has served as its medical director since the beginning.

However, he believes state legislation—the Pennsylvania Emergency Medical Services Act (Act 45), enacted in 1985—had the biggest impact on improving emergency care in the state. "Act 45 was an omnibus bill which addressed all aspects of setting up a system of emergency care—it mandated that all ambulances in Pennsylvania be licensed, set standards for training emergency personnel, provided funding for the development of an emergency communication system, and established the Pennsylvania Trauma Systems Foundation, whose primary role is to accredit trauma centers in the state."

EMS pioneer

Since the 1960s, Dr. Moerkirk has played a major role in improving emergency care on the state level and in the Allentown area. For example, he says that when he became medical director at Sacred Heart Hospital in Allentown in 1966, the hospital's emergency department was staffed primarily by first-year interns. To correct this deficiency, he organized a group of physicians who incorporated and contracted with the hospital to cover the emergency department full-time. This eventually led to the hospital hiring emergency physicians for the emergency department.

On the state level, Dr. Moerkirk helped set up the Pennsylvania Trauma Systems Foundation (PTSF) and the Pennsylvania Emergency Health Services Council (PEHSC), a statewide organization which advises the Pennsylvania Department of Health and the regional EMS councils . He served as PEHSC president from 1980 to 1983 and again from 1990 to 1993. He is also currently on the board of directors of both PTSF and PEHSC.

Dr. Moerkirk says he is most proud of the part he played in establishing the Emergency Medicine Institute (EMI) in 1987. The institute, part of the Lehigh Valley Hospital, trains all levels of health professionals—first responders, emergency medical technicians (EMTs), paramedics, nurses, and physicians—in the management of trauma and urgently ill patients. To this day, Dr. Moerkirk is personally involved in training EMTs and paramedics. He estimates that he has trained more than 500 paramedics and 2,000 EMTs.

Decline of EMS volunteers

Since the beginning, the EMS system in Pennsylvania has depended on volunteers, but this is beginning to change, according to Dr. Moerkirk. "The voluntary system in Pennsylvania has declined, and it's become a predominantly paid system which significantly increases the cost. As with all areas of health care, EMS is going to be significantly affected by health care reform."

He explains, "Hospitals have already begun to find ways to cut costs in the emergency departments, and ambulance corps are going to have to do the same thing. I think the ambulance corps that are going to be able to provide care at a reasonable cost are those that have been successful in blending volunteer and paid staff in the same corps."

Pennsylvania's EMS system would particularly benefit from more physician volunteers, Dr. Moerkirk says. He encourages physicians to become medical directors for ambulance corps, and instructors for EMT, paramedic, and CPR courses, and to volunteer for medical command positions.

He says he has found his experience in the EMS system to be "extremely rewarding," especially his role in training EMTs and paramedics. "I get incredible satisfaction from watching the different people I train grow. I always try to encourage them to advance their knowledge and growth in the system, and the vast majority of them do."

He adds, "I recently had a man come to my office who I had treated years before for severe arm injuries. He came to thank me and tell me that he was certified in CPR and was in training to become a first responder. I can't describe the feeling you get when you've helped someone, and he or she comes back and wants to put something back into the system. It makes everything worthwhile." ⬡

The Development of Emergency Medicine

Following the battlefield experiences of the Korean and Vietnam wars, physicians began to recognize that prompt, effective action in the first minutes of an emergency could save thousands of Americans each year. The need for specialized training to provide quality emergency care motivated a group of eight physicians in 1968 to form a professional association for physicians practicing in emergency departments. The American College of Emergency Physicians (ACEP), with a current membership of more than 17,000, was instrumental in establishing emergency medicine as a specialty.

In September 1979, ACEP's efforts met with success when the American Board of Medical Specialties voted to approve emergency medicine as the 23rd medical specialty. Today, there are more than 11,000 board-certified emergency physicians in the United States.

For more information on emergency medicine or on how you can become more involved with emergency medical services in your area, call the Pennsylvania Chapter of ACEP at (800) 228-7823, extension 463.

Spring Assembly '94

Physicians Prepare for System Changes

Maria T. Montesano
Assistant Managing Editor

It's easy to liken the U.S. health system reform debate to a game of chess: Clinton's presidential campaign was the challenge, followed by months of exchanging moves after his inauguration. But now we seem caught in the middle—each move, carefully designed; the outcome, difficult to call. And all the while, physicians' futures rest on that outcome.

In an effort to prepare physicians for the changes to come and the roles they may be asked to play, the Society focused its annual Spring Assembly on "Forging Alliances...Assuring Your Future." Speakers discussed the future of health system reform, and workshops offered tools to help physicians deal with the future.

More than 275 members attended the meeting, held April 19-20 in Harrisburg.

At issue: reform financing

Richard F. Corlin, MD, vice speaker of the AMA House of Delegates and a graduate of Hahnemann University School of Medicine, has seen the uncertainty of health system reform before. As a recent past president of the California Medical Association, he has dealt with changes in that state and their impact on physicians.

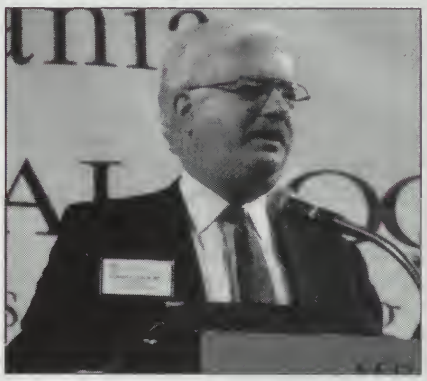
Dr. Corlin relayed his knowledge and experiences in the assembly's keynote address, which focused on: "What is our perception of what we think is going on, and what can we expect out of Washington?"

At issue is the financing of health care in the U.S., according to Dr. Corlin, and he outlined what he sees as our only two choices: 1) continue the employer mandate, or 2) use a tax base. "If you take a look at what we have learned from the combination of experience and elections, and the results of polling," he explained, "by a process of elimination, we are left with one potential tax source to fund health care...a payroll tax—the majority paid by the employer, a small portion paid by the employee."

He said, "In the final analysis there are two sources of money: the employer mandate or a payroll tax. In either case, the business community will be paying for health care."

He then overviewed the principles behind the AMA's Health Access America reform plan—commitment to universal coverage, employer mandate, tort reform, and antitrust relief—the same principles behind President Clinton's approach to reform. "Any of us who watched President Clinton's September 22 speech had to come away with a conclusion that that was a masterful speech, and there was virtually nothing in that speech that anybody could've disagreed with," he said. "The question we raise is, How did we go from that speech to the plan that a lot of us have so very much trouble with?"

Dr. Corlin believes President Clinton "clearly and unequivocally campaigned on and delivered on the commitment to put a health care delivery system before the American people, and he did. The *way* he did it," he added, "is the seed of many of the mistakes and many of the problems that have occurred."



Richard F. Corlin, MD, vice speaker of the AMA House of Delegates and recent past president of the California Medical Association, discussed in the assembly's keynote address his experiences with health system reform.

He said one of the president's mistakes was the manner in which the developmental panels were put together—the administration violated "Millers' Laws," a concept Dr. Corlin learned in England. Miller's Laws say:

1) Physicians with real experience treating patients, and administrators with real experience administrating, must be involved in the development of any government program affecting the health system.

2) All planning of the program must be done on a local level.

3) Don't allow the program to become a partisan political football.

He believes that, in the end, any plan that follows Miller's Laws is a "good" plan, and any plan that does not is a "bad" plan.

Of the president's plan, Dr. Corlin doesn't think we'll see alliances as proposed, but he is anticipating that

The Law of the Jungle

This is the law of the jungle, it's as old and as true as the sky.

And the wolf that shall keep it may prosper, but the wolf that shall break it must die.

Like the creeper that girdles the tree trunk, the law runneth forward and back.

For the strength of the pack is the wolf, and the strength of the wolf is the pack.

—from Rudyard Kipling's The Jungle Book, *quoted by Richard F. Corlin, MD, at the Society's 1994 Spring Assembly, in his keynote address which stressed the need for physician unity nationwide.*

Kenneth E. Thorpe, PhD, deputy assistant secretary for health policy, U.S. Department of Health and Human Services, brought the White House's view of the future of health system reform to the assembly.

"something will pass" to ensure universal coverage, and it will include some insurance underwriting reform and some tort reform. However, he said, "it probably will not have the antitrust relief that we want" and will not adequately address cost containment.

The AMA is committed to a health system reform proposal that "abides by Miller's Laws, is honestly financed, and has the ability to deliver 100 percent of what it promises," Dr. Corlin said.

In conclusion, he offered this message for all physicians: "What's under discussion now are just two things: How will you be able to treat your patients, and how—and how much—will you be paid for doing it? If those two things are enough to gather your attention, then you should pay attention to what's going on...We didn't get where we are by not being informed...We have got to remain united in our response, and how good the outcome is for us is directly proportional to that unity."

The future of reform

Kenneth E. Thorpe, PhD, deputy assistant secretary for health policy, U.S. Department of Health and Human Services, and a native of Indiana, Pennsylvania, brought the White House's view of the future of health system reform to the assembly.

After reviewing the five major themes of President Clinton's reform plan—guarantee universal coverage, allow individual choice of physicians and health plans, outlaw unfair insurance practices, preserve Medicare, and guarantee health benefits at work—Dr. Thorpe discussed the problems he sees physicians and patients facing under the current health delivery system.

First, he cited that, given the way the system is set up, power is increasingly residing in the hands of health insurers. "If you look at the last 10 to 15 years, there's no question that physician autonomy, and how you practice medicine, have changed quite substantially," he said. "Some of this has to do with the fact that employers are entering into exclusive contracts with insurance companies that have tremendous leverage over providers, [and] physicians have increasingly less negotiating leverage...Insurers can drop them without process." With respect to patients, he said, they often don't know what benefits they're getting until it's too late.

> ***"In the final analysis there are two sources of money: the employer mandate or a payroll tax. In either case, the business community will be paying for health care."***
>
> *—Richard F. Corlin, MD*

Second, he cited the problems of paperwork and bureaucracy. "We've seen that paperwork and the bureaucracy often overwhelm providers," Dr. Thorpe said. "The cost of billing and the overhead costs of running a physician's office continue to increase over time. A lot of it has to do with the proliferation of competing plans offering variations on benefits, as well as very different forms and different amounts of coverage." The administration is proposing to "fix" this problem through form standardization and uniform benefits.

He also said that the plan addresses access problems and distribution of physicians, and he hopes it allows freedom of choice for physicians and individuals, changes in the balance of power, and antitrust relief—three issues which he said are gaining increasing support in Washington.

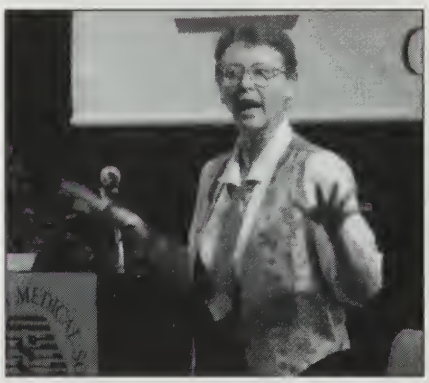
Dr. Thorpe encouraged attendees to be active participants in the health system reform debate. "As long as we've been discussing this issue, many people still remain somewhat ill-informed; information and feedback from providers is essential." He concluded that no health system reform proposal would go through "without the active support of the provider community."

Dealing with the future

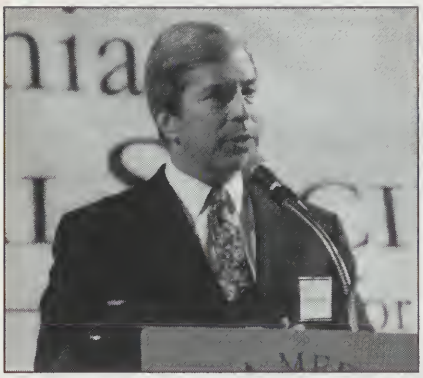
Jennifer James, PhD, received "excellent" marks from assembly participants for her heartfelt, yet witty presentation on dealing with change and the future. As a cultural anthropologist, she said her job is to study change and how people adapt to it—a necessity for survival.

Speaking about health system reform, she said she sees "tremendous resistance [by physicians] to accept reality." That resistance is understandable, she said: "You've worked hard, [and] now your integrity is being questioned." But such resistance is also a natural part of the acceptance process, which parallels the grieving process—including denial, anger, bargaining, and fundamental acceptance.

While she believes "professions should be able to reorganize themselves," Dr. James said society won't let them. Thus, to rebuild, physicians must get to the acceptance phase. But that's tough, she added: "No generation before has been asked to change as rapidly and as deeply as this generation is being asked to [change]. Mental health used to be [indicated by] stability; Now, it's indicated by the ability to handle diversity."



Cultural anthropologist Jennifer James, PhD, received "excellent" marks for her heartfelt presentation on dealing with change and the future.



Back by popular demand, Thomas M. Reardon, Esq., of Boston, discussed the concept and benefits of physician-controlled alliances and physician-controlled capitation which, he said, "works."

She likened medicine as we know it to a "lodge" or fraternal organization, and said to adapt to the medicine of the future, physicians must change medicine "from a lodge to a profession"—they must "open it up." She explained that by challenging the rituals and supply and demand, many things will follow:

- The hierarchy will change.
- Accountability will improve.
- Patients will become more informed.
- Ethics issues will be better addressed.

In closing, Dr. James offered the following advice for physicians in dealing with the changing face of medicine: Look at the problems; offer your insight; intervene where you can; try to handle your anxiety; watch out for nostalgia; imagine other possibilities; and foremost, "Don't let the grief process stop you."

Forging alliances

One of last year's most popular presenters, Thomas M. Reardon, Esq., of Boston, specialist in health law and chairman of the board of the Massachusetts Eye and Ear Infirmary, returned to Spring Assembly this year to talk about physicians developing relationships with hospitals, financing entities, and other physician groups.

"Today, I'd like you to open your minds and think of things in a little different way," Reardon began, "because I think in the health care field, the world is going to be turned upside down. What was bad will become good, and what was good will become bad," he said, "and let's not kid anybody: Somebody's going to get hurt."

What health system reform is really about, he said, is not what will come out of Washington—that will be "largely irrelevant." Instead, the question is, "Who's going to control the system?"

"No generation before has been asked to change as rapidly and as deeply as this generation is being asked to [change]."

—Jennifer James, PhD

". . . I think in the health care field, the world is going to be turned upside down. What was bad will become good, and what was good will become bad . . . and let's not kid anybody: Somebody's going to get hurt."

—Thomas M. Reardon, Esq.

Six groups are battling for control, according to Reardon: insurance, health maintenance organizations, government, business coalitions, hospitals, and physicians. Currently, the West Coast is controlled by managed care players, the Midwest is controlled by business coalitions, and the East Coast is regulated by the government, he explained, noting that in all areas, "somebody else has been driving the system." But he sees physicians' roles expanding in the future—through physician-controlled alliances, whether they be physician-hospital organizations or group practices.

Reardon is an advocate of physician-controlled capitation. He explains the concept: "You hand a dollar to a primary care physician, and you say to that primary care physician, 'Keep this dollar away from the specialists, and keep it away from the hospital—and, by the way, you'd better assure quality of care—and if you do all that, you can put the balance in your pocket.' " He said, "Human nature is such that it works."

He left the audience with the following three suggestions to assure physicians a position at the game board in the future: 1) aggregate physician power; 2) *really* learn about capitation; and 3) truly network and pick your partners.

Pennsylvania Medical Society President Martin A. Murcek, MD, opened the Wednesday morning session of Spring Assembly with a few thoughts on organized medicine and health system reform. *For excerpts, see page 8.*

WORKSHOPS OFFER TOOLS FOR THE FUTURE

Keeping with the themes of building alliances and assuring the future, the Spring Assembly offered attendees "tools for building alliances" through six concurrent workshops on Wednesday, April 20. Sessions focused on computers, medical staff networks, financial planning, communication skills, medical ethics, and managed care contracts.

Computers

Society Trustee Edward H. Dench Jr., MD, led "Computers Made Easy," a discussion of the basics of personal computers and their growing role in the health care system.

A personal computer user and adviser, Dr. Dench began with an overview of hardware components, before moving into a brief discussion of software available for use in physician offices and other technical considerations. He stressed that it is important for physicians to know what they want to accomplish with a system before they

Dr. Dench

purchase computer hardware and software.

Participants also received a detailed list of computer terms and definitions. The workshop ended with an extensive question-and-answer session.

Medical staff networks

Stephen M. Griffin, senior manager for KPMG Peat Marwick Management Consultants, presented "PHO...Friend or Foe?," a nuts-and-bolts workshop focusing on the considerations and ramifications of establishing medical staff networks—specifically physician-hospital organizations (PHOs) compared to physician organizations (POs).

A specialist in health care financial and strategic management, Griffin discussed horizontal versus vertical integration and the goals of physician integration. Questions posed by participants addressed time and financial considerations, physicians' roles in PHOs, governance and structure of PHOs, and economic credentialing.

Financial planning

Developed at the request of the Society's Young Physician Section, "Financial Planning in the Changing Environment" offered participants advice on planning for future financial security.

Led by Ronald J. Paprocki, JD, CFP, corporate vice president, AMA Investment Advisers, Inc., Chicago, discussion focused on various investment and insurance options, and how to be successful using them. He also overviewed basic investment terms, talked about the impact of taxes and investment alternatives, and offered what to look for in an investment adviser.

In guiding participants, Paprocki stressed the importance of planning—especially with the changing economic environment—and noted that each individual requires a different investment profile reflective of his or her own situation and long-term financial goals.

Communication skills

Robert Lamb, of The Institute for Physician Leadership of the Society's Educational and Scientific Trust, and Amy Dugan, the Society's director of media relations, led "Winning Approaches to Your Legislator and the Public," designed to increase physicians' grassroots lobbying effectiveness and public speaking by improving their communications skills.

During the first half of the workshop, Lamb outlined ideas and essential skills needed to communicate effectively with legislators. Attendees then participated in role-playing exercises to practice and evaluate their lobbying skills.

Dugan then "reminded" participants of skills necessary to speak effectively to the public—skills they already knew, "but may have forgotten," she said. She discussed confidence and credibility, as well as the different components of a good speech.

Medical ethics

In "Difficult Decisions for Patients and Their Families," Stuart Younger, MD, associate professor of medicine, psychiatry, and biomedical ethics, Case Western Reserve University, and

Dr. Younger

Ms. Gosfield

director of the Clinical Ethics Program at University Hospitals of Cleveland, talked about how to talk to patients and their families about medically futile care and other ethical considerations raised by health system reform.

He began by discussing the varying definitions of medical futility. Then, realizing the controversy and moral issues raised by medical futility, Dr. Younger overviewed options available to handle such cases and stressed the importance of hospital ethics committees.

He spent the last half of the program working through specific situations and publicized cases with his audience.

Managed care contracts

Alice G. Gosfield, a Philadelphia attorney specializing in health law and health care regulation, returned to Spring Assembly for her third appearance in four years to talk to participants about "Contracting with Managed Care Organizations."

Her presentation included an overview of what physicians should ask for when entering into contractual arrangements and a detailed analysis of related legal issues, such as understanding the context, credentialing and corrective actions, and utilization management. She also explained contract terms and issues, and how to evaluate a managed care plan.

Participants received several handouts, including two related articles written by Gosfield.

HMSS HOLDS TWENTIETH ASSEMBLY

The Society's Hospital Medical Staff Section (HMSS) Twentieth Assembly Meeting, held in conjunction with Spring Assembly in April, was attended by 119 physicians and guests.

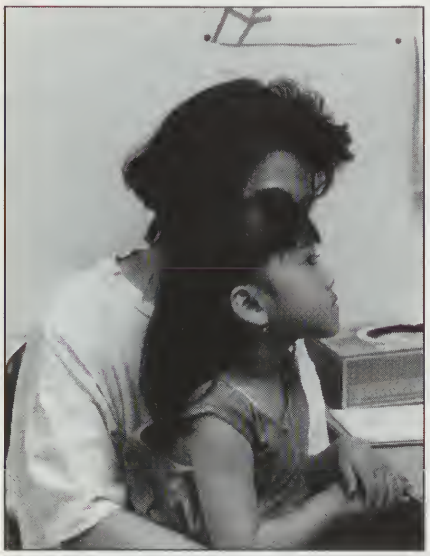
The educational program, "Forming PHOs: Hospital and Physician Perspectives," was well received. Speakers included Donald R. Creamer, president and chief executive officer of the Williamsport Hospital and Medical Center, and Bruce G. Silver, MD, section chief of geriatrics at Lankenau Hospital, Wynnewood.

Discussed during the open forum portion of the meeting were:

- the merger of Independence Blue Cross and Graduate Health Systems,
- representation on boards of physician-hospital organizations and other health care organizations, and
- HMO tactics for obtaining enrollees.

An audio cassette of the educational program is available for $8 by calling the HMSS at (800) 228-7823.

The Society's Hospital Medical Staff Section (HMSS) convened in April to discuss physician-hospital organizations and other current medical staff issues. Pictured above: HMSS representatives consider debate during the open forum portion of the meeting.



Four-year-old Felicia Nguyen, Harrisburg, sits on her mother, Hue's, lap while learning how immunizations will keep her healthy. Felicia received her pre-kindergarten immunizations during Pennsylvania Infant Immunization Week, April 23-29, 1994.

STATE OFFICIALS LAUNCH IMMUNIZATION WEEK

First Lady Ellen Casey and State Health Secretary Allan S. Noonan on April 25 launched Pennsylvania Infant Immunization Week in a ceremony at the Dauphin County State Health Center in Harrisburg. The effort was held in conjunction with Rotary International's project, "Operation Immunize Pennsylvania Kids."

Mrs. Casey, reading from a proclamation issued by Governor Robert P. Casey, said, "Vaccine-preventable diseases can cause serious health problems for children and can even cause death. Preventing diseases by immunization also prevents costly curative or long-term medical procedures that tend to raise the overall cost of medical care dramatically."

Dr. Noonan said statistics show that only 66 percent of Pennsylvania's children between ages 1 and 6 are adequately immunized. He also praised Pennsylvania's Rotary Clubs for their efforts: "Rotary has made this work through its promotion, volunteer activities, printing and distributing literature, and community outreach."

Mrs. Casey

Dr. Noonan

Roger F. Mecum, State Society executive vice president, also spoke on behalf of the Society, and following the speeches, preschoolers who had not received immunizations in the past received free ones from the health center nursing staff.

Pittsburgh Physician Recognized for Volunteer Efforts

The Pennsylvania Medical Society this year awarded its first-ever Physician Volunteer Award to Helen W. Gurson, MD, a family practitioner from Pittsburgh's South Side. The award, presented at the Society's Spring Assembly in April, honors Dr. Gurson's lifetime of unselfish devotion to her patients and community.

Helen W. Gurson, MD

One of three women graduates of the University of Pittsburgh School of Medicine, Class of 1942, she is well-known for her charity work—caring for all regardless of their ability to pay—and the diabetes control program she runs.

Soft-spoken and quite modest, Dr. Gurson explains the program: "I'm on the South Side of Pittsburgh, where we have the steel mills. A lot of the steel workers [afflicted with diabetes] must be at work at 6:00 in the morning. So, we opened our doors at 4:30 a.m., so we could take their blood, they'd have time to eat breakfast, and they'd still be to work on time."

She says her father was a severe diabetic, and she started the program to make it easier for people with diabetes to monitor their condition. "A lot of the patients didn't understand the disease and didn't take care of themselves—they didn't watch their diet, they didn't take their medication. This way, we'd make them aware of it." Check-ups are once every four months. Dr. Gurson says she currently has about 400 diabetic patients.

In 1992, Dr. Gurson received the Allegheny County Medical Society's (ACMS's) Nathaniel Bedford Award, which honors a primary care physician who has demonstrated long-term dedication to patients' physical and psychological needs. She has been a member of ACMS since 1945 and currently serves on its board of directors as chair of the South Hills Branch.

When asked what has given her the greatest satisfaction from being a doctor, she quickly, yet simply, responds: "Being able to help others." As for receiving the Society's Physician Volunteer Award, she says, It's an honor...especially from the State Society. In your own little corner, people know you, but from the State Society...this is wonderful."

TEENAGERS TO CONVENE AT ASSEMBLY THIS MONTH

About 500 teenagers from across the state are expected to convene in workshops, with topics ranging from business skills to non-violence, during the Second Annual Pennsylvania Martin Luther King Jr. Youth Assembly, cosponsored by the State Society. The three-day conference—the only state-level meeting of this type in the country—will be held June 17-19 at Millersville University.

Goals of the conference are to:

- familiarize youth with the philosophy and principles of non-violence as taught and lived by Dr. Martin Luther King Jr.;
- help youth understand and appreciate multi-cultural, multi-lingual, and multi-racial diversity and the importance of respect for others;
- teach youth the conflict-resolution skills they need to make responsible decisions to treat others with respect and love and as brothers and sisters;
- provide role models so that participating youth can develop self-esteem and moral concepts, so they value themselves; and
- convey the knowledge, skills, language, and habits that participating youth will need to function successfully in society and have a broad understanding of the world.

Dan Haro, coproducer of the film "Lives in Hazard," a story about youth violence, and an actor in "America Me," about Latino gangs and growing up in an urban neighborhood, and Willie Jolley, a prize-winning inspirational and motivational trainer, will also speak to the participants.

Workshop topics include:

- Ghandi's Call—a global perspective of non-violence and a look at the man who is called the father of India;
- King's Walk—a closer look at the civil rights movement and a discussion of its relevancy today;
- Law Enforcement, Friend or Foe—a presentation and open discussion regarding suspicious behavior and other miscommunication between youth and law enforcement officers; and
- Pop It, Smoke It, Inhale It, Stick It, Forget It—a look at today's drug culture, and how to avoid drug usage and drug wars.

Also included are: a presentation on what is happening with gangs in the state, and tips on how to avoid becoming a gang member and how to get out once involved; a frank discussion on the realities of prison, with Huntingdon State Prison inmates; tips on owning and operating a viable business; and identification of scholarships, financial assistance, and other information needed to help teens prepare for college.

One special segment of the conference involves participation in service projects around the Millersville area.

COUNTY NEWS

Bruce G. Silver, MD (at left), a Narberth internist and geriatric specialist, was inaugurated as the 134th president of the Delaware County Medical Society (DCMS) at the group's annual dinner meeting in March. A graduate of Jefferson Medical College, Dr. Silver is a member of the medical staff at Lankenau Hospital, Wynnewood, and medical director of Saunders House, a long-term care facility associated with the hospital. Also at the dinner, Senator Clarence Bell (R-Delaware) was honored for his record of service in the Pennsylvania Senate.

STATE SOCIETY REPORT

QUARTERLY REPORT OF HOUSE AVAILABLE

In accordance with Resolution 92-27 of the House of Delegates, the quarterly report on actions of the House is now available from the State Society. The report is provided to members to enable them to respond to and participate in upcoming House activities. To request a copy, call:

St. Francis Medical Center, Pittsburgh, has named **Lee H. McCormick, MD,** associate medical director of the outpatient network for the center for chemical dependency treatment.

W. William Shay, DO, Boyertown, was reelected president of the Acupuncture Society of Pennsylvania.

Todd Richard Fisher, MD, Middletown, a family practitioner, was elected as the 130th president of the Dauphin County Medical Society. Dr. Fisher is affiliated with the Family Medicine Center, Middletown. He succeeds **Virginia Hall, MD**.

James S. Studdiford III, MD, was appointed assistant professor of the Department of Family Medicine, Jefferson Medical College of Thomas Jefferson University, Philadelphia.

Dr. Cohen

Sidney Cohen, MD, the Richard Laylord Evans Professor of Medicine and chairman, Department of Medicine, Temple University Health Sciences Center, Philadelphia, has been named assistant vice president for the Health Sciences Center.

The American Brain Tumor Association has awarded to **Anna Julia Janss, MD, PhD,** neuro-oncology fellow, Division of Oncology, Children's Hospital of Philadelphia, a fellowship for 1994-96.

Lawrence A. Caliguiri, MD, Pittsburgh, was elected chair of the American Association of Allergy and Immunology's board of governors of national, state, and local societies.

Dr. Novak

Jospeh F. Novak, MD, Pittsburgh, received the Pennsylvania Academy of Ophthalmology's Humanitarian Service Award for his pioneering, life-long effort to promote eye safety in the steel mills of Western Pennsylvania.

St. Francis Medical Center, Pittsburgh, has appointed **Elmer J. Holzinger, MD,** senior vice president of academic affairs and development.

Fairman L. Denlinger, DO, was presented with the O.J. Snyder Memorial Award by the Philadelphia College of Osteopathic Medicine. This award recognizes an alumnus or alumna who has made significant contributions and has exhibited outstanding loyalty, leadership, and service to both the college and the osteopathic medical profession.

University of Pittsburgh Medical Center has named **William C. Lauerman, MD,** codirector of the newly formed comprehensive spine center.

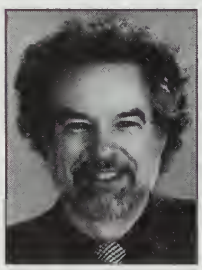
Ivo P. Janecka, MD, director, University of Pittsburgh Medical Center's Center for Cranial Base Surgery, received the American Academy of Otolaryngology's 1993 Head and Neck Surgery Honor Award.

Richard L. Simmons, MD, chair, surgery department, University of Pittsburgh School of Medicine, has received the National Kidney Foundation of Western Pennsylvania's Gift of Life Award.

Three Pittsburgh physicians, **Kenneth M. Irvis, MD**; **Oswald J. Nickens, MD**; and **Robert L. Thompson, MD,** were saluted in honor of Black History Month by the Healthy Start program for excellence in medicine.

Rodrigue Mortel, MD, professor and chair, Department of Obstetrics and Gynecology, Penn State's Milton S. Hershey Medical Center, Hershey, was elected president of the Society of Gynecologic Oncologists.

The Commonwealth Board Award of the Medical College of Pennsylvania, Philadelphia, has made a yearly mission of honoring graduates who are the best doctors and medical researchers in the state. This year's recipient is **Mary Ann E. Keenan, MD,** chairperson of orthopedic surgery, Albert Einstein Medical Center, Philadelphia. Dr. Keenan was the first, and currently is the only, woman to chair an orthopedic surgery department and residency training program in the United States.



Dr. Pertschuk

Michael J. Pertschuk, MD, Villanova, will serve as medical director of a new eating disorders center being developed at the Friends Hospital, Philadelphia.

Mark H. Blecher, MD, associate surgeon, Wills Eye Hospital, Philadelphia, was elected president of the Pennsylvania Academy of Ophthalmology.

Haig H. Kazazian Jr., MD, was appointed chairman, Department of Genetics, University of Pennsylvania Medical Center, Philadelphia.

Donald H. Silberberg, MD, chairman, Department of Neurology, University of Pennsylvania Medical Center, Philadelphia, was selected co-editor of *Multiple Sclerosis*, a new international peer-reviewed journal.

Sze-ya Yeh, MD, chairman, Department of Obstetrics and Gynecology, Albert Einstein Medical Center, Philadelphia, was awarded the Society of Perinatal Obstetricians' Achievement Award.

Four Pennsylvania Medical Society members—**James L. Cristol, MD;** Philadelphia County; **Daniel B. Kimball Jr., MD,** Berks County; **John R. Martell Jr., MD,** Allegheny County; and **Carl A. Sirio, MD,** Allegheny County—have been named to the AMA's Federation Study Consortium. Created at the direction of the AMA House of Delegates, the consortium is charged with: analyzing the functions, processes, and structural relationships among physician organizations, and recommending improvements. The AMA says the goals of the consortium are: "to create an environment in which all of medicine can better speak with one voice about issues affecting patients, and to develop mechanisms through which organized medicine can function more efficiently and effectively."

SWEEPING CHANGES IN WORKER'S COMPENSATION LAWS ARE AFFECTING COST RECOVERY FOR TODAY'S HEALTH CARE PROFESSIONAL. PHYSICIAN'S LEGAL SERVICE PLAN HAS A SOLUTION . . .

Quality Care Is Reform Priority

Donald E. Harrop, MD

How health system reform will finally "shake out" in Pennsylvania remains a mystery to us all. This month, we consider that mystery and reform's most important provision—quality care.

Since KePRO has a vested interest in the future direction of health system reform at both the national and state levels, I've been trying to keep up with the various reform proposals being sponsored by our legislators in Washington and in Harrisburg. This is no easy task since there are so many proposals being introduced and so many opinions on what kind of benefit package should be mandated and how the program should be financed.

There seem to be quite a few legislators from both sides of the aisle who do not support the Clinton Administration's plan, some because they think it creates a huge new bureaucracy, some because the reduction in choice of physician under the managed care concept may not be popular with their constituents, some disbelieve the numbers used as the basis for financing it, and some for a wide variety of other reasons.

Although all indications point to eventual passage of some type of reform, I feel quite certain that it will take a lot longer than expected for passage of a national program. In fact, history tells us that back around 1970 through 1974, national health insurance looked like a sure thing. Many senators and congressmen were involved with proposing some sort of program. Then it all went quietly away, because no one could figure out how to finance it.

I'm not saying that the same thing will happen this time since I think there is more public support and more momentum now. However, whatever kind of program finally passes may not resemble what we have recently seen proposed.

Meanwhile, the Clinton Administration is promoting the idea that states should take some initiative and institute their own reform programs. The states that do would probably act as test sites for reform plans similar to the national proposal. In Pennsylvania, I will be curious to see what kind of support there is for the Casey Administration's reform package.

Except for the on-again, off-again Democratic/Republican majority in the Senate, this state could possibly have become a test site for reform since the Casey plan very closely resembles the Clinton proposal. In fact, at this point in time, many would argue which plan came first. Had the Democrats maintained control in the Senate from the start, the Casey plan may have had a chance for passage. However, because the governor's term will expire in about six months, his chances of getting a plan passed before he goes out of office are growing dim.

The new governor, whether Democrat or Republican, will most likely offer some difference in approach to health system reform. The amount of difference and the efforts made to accomplish passage will depend upon who becomes the successful candidate and his/her party affiliation.

In any event, it appears that managed care/competition will continue to be favored by those who think it is the only cost-effective approach to universal health care coverage, and President Clinton has said that he will veto any bill that does not provide universal coverage.

As an organization, the Keystone Peer Review Organization has no particular position for or against health system reform or how it should be structured. But, if and when a program is passed, we strongly believe that it should include a provision for assuring the delivery of quality care, monitored by state-based, independent, quality improvement organizations. It will be interesting to see how all of this finally shakes out.

Dr. Harrop is president of the Keystone Peer Review Organization.

OBITUARIES

Edward B. Charney, MD, *Cherry Hill, NJ*
New York University School of Medicine, 1971; age 48, died February 6, 1994. Dr. Charney was a pediatrician.•

Francis A. Dineen, MD, *Pittsburgh*
Jefferson Medical College of Thomas Jefferson University, 1939; age 80, died April 7, 1994. Dr. Dineen was an internist.•

John J. Donovan, MD, *Pittsburgh*
Jefferson Medical College of Thomas Jefferson University, 1944; age 74, died February 23, 1994. Dr. Donovan was an internist.•

Sydney Davis II, MD, *Milton*
University of Pennsylvania School of Medicine, 1943; age 74, died March 6, 1994. Dr. Davis was a dermatologist.•

Samuel B. Fleagle, MD, *State College*
Georgetown University School of Medicine, 1941; age 80, died February 16, 1994. Dr. Fleagle was a general practitioner.•

Chauncey Hoffman, MD, *Johnstown*
Rush Medical College of Rush University, Illinois, 1937; age 88, died April 7, 1994. Dr. Hoffman was a family pracititoner.•

J. Warren Hundley, MD, *Bala Cynwyd*
University of Virginia School of Medicine, 1927; age 92, died March 23, 1994. Dr. Hundley was an internist.•

Robert G. Hunter, MD, *Jensen Beach, FL*
Jefferson Medical College of Thomas Jefferson University, 1950; age 73, died March 24, 1994. Dr. Hunter was a pathologist.•

Edward R. Janjigian, MD, *Kingston*
Age 84, died March 22, 1994. Dr. Janjigian was a neurologist.•

Frank E. Kulbaski, MD, *Ashley*
Hahnemann University School of Medicine, 1961; age 63, died March 31, 1994. Dr. Kulbaski was a radiologist.•

Robert L. Leopold, MD, *Haverford*
University of Pennsylvania School of Medicine, 1946; age 71, died April 9, 1994. Dr. Leopold was a psychiatrist.•

Angelo J. Maniglia, MD, *Altoona*
Hahnemann University School of Medicine, 1944; age 77, died March 28, 1994. Dr. Maniglia was an internist.•

Emroy A. Rittenhouse, MD, *East Lansing, MI*
University of Pittsburgh School of Medicine, 1936; age 83, died April 5, 1994. Dr. Rittenhouse was an otolaryngologist.•

Robert L. Sutton, MD, *Pittsburgh*
University of Pittsburgh School of Medicine, 1936; age 84, died March 22, 1994. Dr. Sutton was an internist.•

William C. Vernocy, MD, *Indiana*
University of Pittsburgh School of Medicine, 1936; age 81, died March 22, 1994. Dr. Vernocy was a general surgeon.•

George Chiao-Chi Wang, MD, *Drexel Hill*
Boston University School of Medicine, 1956; age 75, died March 30, 1994. Dr. Wang was a hematologist/oncologist.•

Janusz F. Winiarski, MD, *Hollidaysburg*
University of Freiburg, Germany, 1955; age 68, died March 22, 1994. Dr. Winiarski was an anesthesiologist.•

John P. Yukevich, MD, *Pittsburgh*
University of Pittsburgh School of Medicine, 1949; age 74, died April 5, 1994. Dr. Yukevich was a general practitioner.•

Robert Berger, DO, *Philadelphia*
Philadelphia College of Osteopathic Medicine, 1958; age 62, died February 14, 1994. Dr. Berger was a pediatrician.

Anthony F. Branella, MD, *Merion Station*
University of Rome, Italy, 1940; age 79, died April 4, 1994. Dr. Branella was an internist.

Richard H. Miller, MD, *Pittsburgh*
University of Pittsburgh School of Medicine, 1969; age 50, died March 23, 1994. Dr. Miller was a radiologist.

Josephine M. Stephens, MD, *Monongahela*
University of Pittsburgh School of Medicine, 1928; age 92, died April 6, 1994. Dr. Stephens was a pediatrician.

James A. Stewart, MD, *Pittsburgh*
Meharry Medical College School of Medicine, Tennessee, 1951; age 72, died March 30, 1994. Dr. Stewart was a general practitioner.

Ives C. Thillet, MD, *Philadelphia*
Age 65, died February 5, 1994. Dr. Thillet was a psychiatrist.

Bernard A. Tomassetti, *Boothwyn*
Jefferson Medical College of Thomas Jefferson University, 1945; age 74, died April 9, 1994. Dr. Tomassetti was an internist.

Johanna L. Wagner, MD, *Doylestown*
Temple University School of Medicine, 1949; age 78, died February 10, 1994. Dr. Wagner was an obstetrician/gynecologist.

• Denotes membership in the Pennsylvania Medical Society at the time of death.

The Educational and Scientific Trust of the Pennsylvania Medical Society provides you with a way to make a significant statement honoring the memory of and paying tribute to your colleagues who are deceased.

Send your tax-deductible memorial gift to The Educational and Scientific Trust of the Pennsylvania Medical Society, 777 East Park Drive, P.O. Box 8820, Harrisburg, PA 17105-8820.

...a promise to defend...

HERE ARE THE FACTS: Over 25% of America's Physicians were embroiled in a malpractice issue in the last 12 months. More than 80% of those malpractice allegations will be closed without an award for damages. Your professional reputation and your personal assets are on the line when your professional liability carrier is not both financially sound *and* experienced in the law and the judicial system.

WHEN THE ISSUES ARE LEGAL, NOT MEDICAL — when the allegations are frivolous, or highly emotional — you need a company and legal representation that understands the problem and has the experience to resolve the issue. The Medical Protective Company has specialized in defending doctors since 1899. Our legal and claims management experience is unmatched by any other insurer in the U.S.

FOR MORE INFORMATION on how we can protect your professional reputation and your personal assets, call your local Medical Protective General Agent at 1-800-344-1899.

George C. Manning, MD

Reprinted with permission from the *Bulletin of the Fort Wayne Medical Society,* Fort Wayne, Indiana, April 1994.

Let's face it. We are part of the problem. Every time we write a prescription which costs the patient $47, it is our fault. You do not find the parking lot at General Electric full of Mercedes, Lexus, and Lincolns, but you do at the doctors' parking lot at the hospital.

Not only that, but we are part of a special interest group, and there are only 350,000 non-federal practicing physicians—a pretty small number of votes in a nation of 265 million. Our patients may love us, but at any one time, only 15 percent of the nation are patients, and the rest of the people do not like doctors. These are the facts.

So forget our demands to Congress for special privileges in the health system reform package, even if they are good for our patients. As far as Congress, labor, and Big Business are concerned, we are potholes in the road to progress. The road needs to be patched, but not at the cost of pampering us.

Granted: Things are not good in the field of health care delivery. There is, however, one overriding issue—even though not only the president but the entire Congress is down-playing it over electioneering interests in "universal coverage," "employer mandates," "malpractice reform," "medical IRAs," and a lot of other systems trivialities. That one overriding concern, the one thing that put the whole "reform" process into motion, is *cost*.

That issue has two major subdivisions which have been the engines driving spending sky high: the federal government and the commercial health insurance industry (including HMOs, PPOs, etc.)—and they feed off each other. Neither Congress nor the president really want to face this fact (even though Hillary, for personal reasons, hates the insurance industry). We have to shove it in front of their faces—now. Congress is hard at work on our future.

"Health system reform" is an unconscionable hoax. Saving money on health care always has been number one on the agenda of the American voter. What Congress is giving us is universal coverage and a well-hidden, ever-increasing price tag.

Paradoxically, we could have universal coverage *and* save $300-$400 billion annually on health care *now*, without rationing, if Congress is really serious about doing the will of the people—and willing to overturn some deeply entrenched preconceptions.

What follows is the bare framework for true health system reform, the details of which I will supply anyone—in or out of Congress—on request.

Congress owes it to the voters to take a harder look at the overall structure of the health care plans in those nations that have established successful universal medical coverage. I say successful because most of those nations have a level of care nearly as good as we now enjoy in the United States, but at a maximum cost of only nine percent of their gross domestic product, compared to the 14 percent the U.S. spends today—before universalization. And 17 percent after cost savings, Hillary Clinton let slip a couple of months ago.

The distinguishing feature of successful foreign systems is the almost total lack of government and insurance micromanagement of caregiving by professionals. To emulate those countries, Congress needs to give us a near-total overhaul of the Health Care Financing Administration, parts of OSHA, and of the Federal Trade Commission—and of their regulatory structures.

It also needs to change the commercial health insurance industry so that up-front, dollar-specific, published indemnifications (not caps) for each specific service are mandated, and to remove from it any leeway to approve or disapprove professional health care decisions. "Managed care" has long since been proven to be the engine driving a huge portion of the health system cost increase. It takes dishonesty to deny it.

Write your senators and representatives, and tell them you want to save big bucks before they start "giving" us anything.

"'Health system reform' is an unconscionable hoax."

Dr. Manning, a retired neurosurgeon, is editor of the* Bulletin of the Fort Wayne Medical Society, *Fort Wayne, Indiana.

You helped do it. Do it again.

Physicians took leading roles in informing patients of the health hazards of smoking.[1] The result: millions have quit.

Now, it's time to point out the medical risks of recreational drug use. Ask your patients if they use cocaine. Then give them the facts.

Cocaine use can lead to[2-4]:
Psychiatric symptoms ranging from irritability to paranoia
Cardiovascular problems including MI and cardiac arrest
Cerebrovascular accidents from TIA to stroke
CNS problems including seizures
And a wide range of **respiratory, renal, musculoskeletal, and GI problems**

References: 1. *A Report of the Surgeon General: Smoking and Health*, publication 79-50066. US Department of Health, Education, and Welfare. 1979. **2.** Bouknight LG, Bouknight RR: Cocaine—a particularly addictive drug. *Postgrad Med* 1988;83(4):115-131. **3.** Derlet RW: Cocaine intoxication. *Postgrad Med* 1989;86(5):245-253. **4.** Buchanan JF: Cocaine intoxication: A review of the presentation and treatment of medical complications. *Hospital Phys* 1988;3:24-28.

SOMETIMES THE BEST DEAL IS THE ONE YOU HAVEN'T HEARD ABOUT.

Maybe you haven't heard about the Medical Inter-Insurance Exchange (MIIX). After all, we're a relatively new player in Pennsylvania's medical professional liability insurance marketplace.

But ask your counterparts in New Jersey, and you'll find we've been getting rave reviews since we wrote our first policy there in 1977. We're proud that 98 percent of our 9,000 insured physicians renew their policies each and every year. With such an outstanding track record, we must be doing something right.

Perhaps it's our **innovative products**, such as our new **$500,000** HIV benefit that provides income protection — at no additional charge — for physicians who become HIV positive. We were the first professional liability insurer in the state of Pennsylvania to offer this coverage.

Or maybe it's our **commitment to service**, which includes 24-hour customer assistance and a claims staff that's the best in the industry. Our insureds know that MIIX makes sense financially, too, considering our outstanding discounts for new and part-time practitioners. We also offer flexible premium payment plans that help you manage your money.

Because MIIX is a **physician-owned company**, you can be assured that everything we do is designed with your best interests in mind. Call us today so you can join your peers who are already benefiting from the MIIX difference.

(800) 234-MIIX

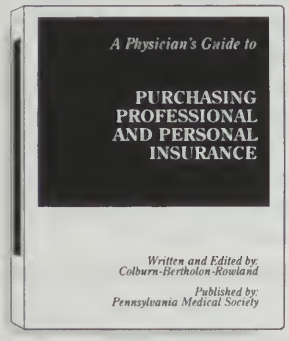
If you're looking for the right group practice coverage, why not ask the people who wrote the book on it?



When they needed to know about insuring you and your group practice, the Pennsylvania Medical Society didn't just want us to act as a guide.

They asked us to write it.

We're Colburn-Bertholon-Rowland (CBR). The endorsed broker for the Pennsylvania Medical Society. And while "A Physician's Guide to Purchasing Professional and Personal Insurance" isn't the catchiest title, if you're up against the complex issues of insuring a group practice, you'll want it on your bookshelf. It deals with everything from life insurance to disability coverage to professional liability insurance. Oh, and health coverage. Homeowner's insurance. Even long-term care. And there's a lot more to it.

Endorsed by the PA Med. Society

And with CBR, there's a lot behind it. We've spent the last 65 years giving doctors our expertise on all forms of insurance and group benefits.

When it comes to individual and group practice insurance, we're the people to call on.

If this sounds like the kind of help you can use, call us at 800-551-4504 (Media) or 800-327-1550 (Pittsburgh). Your CBR rep will do more than give you a hand. The first time you meet you'll receive our book – a $30 value – *free*. And if you want more answers, just ask.

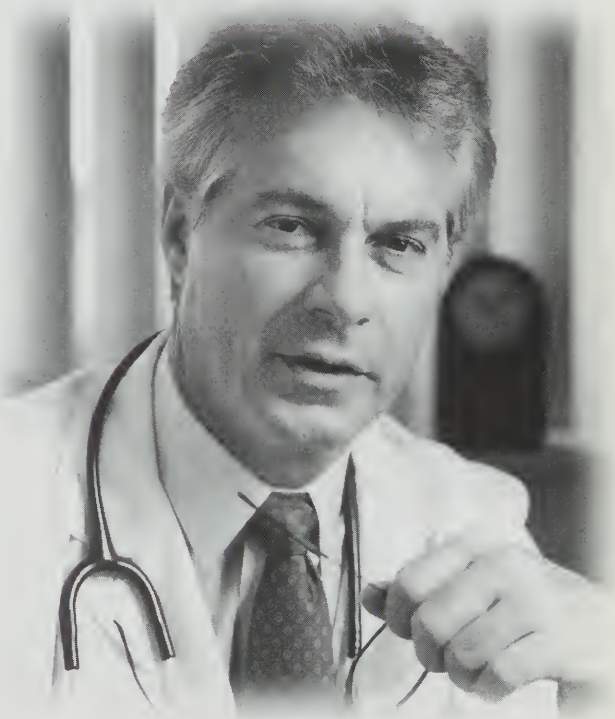
"Unfortunately,

he was already sitting in my examining room. This guy was a walking liability suit looking for a victim. He was angry, non-compliant. It was one of those rare, no-win cases and, well, I guess my number was up.



Then I remembered PMSLIC. So I stepped into the next room and gave them a call. They put me in touch with a member of their Risk Management team, who advised me of the relevant legal issues and the implications of each of my alternatives. Right on the spot. As a result, I was able to make the best medical recommendation with the peace of mind that comes from knowing my legal interests were also protected. I guess that's what it's all about. Peace of mind. The kind you only get from people who really take the time to help. That's excellent service. I'll never change carriers."

MEDIGRAM

DPW DRUG PRE-AUTHORIZATION PROGRAM DELAYED: At the request of the State Society, the Department of Public Welfare (DPW) has delayed until July 18 implementation of a new program requiring physicians to obtain a prior authorization number to be written on prescriptions for certain brand-name drugs for Medicaid recipients. The Society had a number of concerns about the program—most notably that physicians were not given timely notice of its implementation, originally scheduled for July 5. The Society is currently working to resolve other concerns.

The Society stresses that the new program does permit physicians to: 1) request an exception by calling (800) 558-2660, Monday-Friday, 9:00 a.m.-4:00 p.m.; and 2) prescribe a five-day emergency supply of a brand-name drug, only when prior authorization cannot be obtained because the department is closed (weekends, holidays, or after hours), by writing "emergency," as well as "brand name necessary," on the prescription. Direct any questions to the Society's Department of Medical Economics at (800) 228-7823 or (717) 558-7750.

BUDGET PASSES WITHOUT PROVIDER TAX FOR ARBITRATION PANELS: The General Assembly, prior to its summer recess, passed a state budget that includes $706,000 to fund health care arbitration panels for 1994-95. The budget, on the governor's desk at press time, does not rely on a provider tax to fund the panels, as originally proposed. In other news, House Bill 1531, legislation which would permit a physical therapist to provide care to a patient without a prescription from a physician, was stalled in the Rules Committee. The Society opposes the bill, scheduled for House vote in the fall. Also, Senator James Rhoades (R-Schuylkill) has introduced a third-party claims bill drafted by the State Society.

MEDICAL LICENSE APPLICATIONS LOST IN HARRISBURG FIRE: The State Board of Medicine has estimated that a half-dozen applications for unrestricted full medical licenses were lost in the mid-June fire at the State Transportation Building, Harrisburg, which housed the board's offices. Physicians who sent in applications shortly before the fire may check their status by calling the board at (717) 783-1400.

PHYSICIANS DECLINE EXECUTION TASK: At press time, Pennsylvania officials were still in search of a physician to prescribe the lethal combination of drugs and pronounce death in the state's first execution in 32 years, that of convicted murderer Joseph Thomas Szuchon. The AMA, American College of Physicians, American Nurses Association, and American Public Health Association say such actions are unethical. In related news, Senator Robert Jubelirer (R-Blair) has introduced a bill repealing the requirement that a "licensed physician" declare death when a sentence is carried out by lethal injection.

AMA HOUSE ADOPTS SIX PENNSYLVANIA RESOLUTIONS: The AMA House of Delegates at its annual meeting in June adopted six of 10 resolutions offered by the Pennsylvania Delegation to the AMA. Three other resolutions were addressed in reports adopted in lieu of the resolutions; one resolution was referred to the AMA board. Look for details in the September issue of PENNSYLVANIA MEDICINE.

In elections: Lee H. McCormick, MD, was re-elected chair of the AMA-HMSS Governing Council, and William H. Mahood, MD, was re-elected to the AMA Council on Medical Service. Jonathan E. Rhoads Jr., MD, was unsuccessful in Pennsylvania's effort to obtain a seat on the AMA board. Also at the meeting, Donald G. Ferguson, MD, was elected to the board of the Organization of State Medical Association Presidents.

HCFA RELEASING MEDICARE SURVEY THIS MONTH: The Health Care Financing Administration (HCFA) this month will release a nationwide survey to measure and evaluate physicians' satisfaction with their Medicare carriers. HCFA says the survey—to be mailed to a random selection of physicians in each service area—should take only 15 minutes to complete, and cover issues related to claims processing, service, and appeals. Physicians who are asked to participate are urged to do so.

SOUND PROTECTION

Princeton knows professional liability insurance.

And we know the disquieting reality. No matter how excellent your skills, you can still be drawn into a medical malpractice lawsuit.

We provide a strength that's instrumental to peace of mind. Just note our success rate over the last four years for cases in the courts: 95 percent were resolved in favor of our policyholders.

That's sound protection for doctors who choose Princeton.

Princeton. It's worth it!

Medical Education: *Disease Prevention Should Be Other Half*

John W. Mills, MD
Medical Editor

Some months, editorial ideas are easy to come by; yet, at other times, I have to rack my brain to come up with something I can really build an editorial around. Occasionally, an idea smolders for a time, then suddenly bursts into an editorial piece. A conversation between two physicians (an ob/gyn and a surgeon) several weeks ago provided a nucleus for this month's editorial. Perhaps the nature of their specialties had a bearing on their comments, but I was struck by the *lack* of preventive medicine awareness in their exchange.

It had been mentioned that the patient about to undergo surgery was a chronic heavy smoker and a poor risk for the emergency cholecystectomy. The surgeon indicated he didn't feel it was his place to interfere with his patient's "rights," and if the patient wished to smoke, that was his business. The ob/gyn agreed wholeheartedly and noted that he never felt it was his duty to broach the subject of smoking with his patients—it was their "right" and business.

"We have a costly system that is not too efficient, and we stress little in the way of prevention of illness."

This really blew my mind! As physicians, we should know what effects poor habits or a poor diet can have on our individual patients. We also have an obligation and a duty to make that information available to our patients. If they ignore our warnings and our information, we should not acquiesce, but continue to discuss and reason with them in hopes of a change for the better.

In the past few months, our country's medical schools graduated the newest crop of MDs and DOs. What has been the main emphasis in their medical training? I don't think it has basically changed since I graduated 41 years ago—our newest members of the profession are acutely trained to diagnose and cure disease. However, this seems to me to be only half of the equation. Prevention of disease should be the other half of medical education.

We do have the finest health care system in the world overall, but as I've noted on these pages before, we have our problems. We have a costly system that is not too efficient, and we stress little in the way of prevention of illness. This has really come to the fore recently with all the publicity over tobacco-related health problems. Witness the huge costs related to substance abuse in our country—from crack babies to domestic violence to automobile fatalities. The numbers are mind-boggling, both in how many people are involved or affected, and in the costs attributed to health care.

I'm always behind in my reading—thus, I keep piles around the house "to eventually get to," much to my wife's consternation! Just recently, I picked up the February 1994 issue of *Prevention Magazine*, and Mark Brinklin's editorial, "The Power of Pro-Active Prevention," struck a responsive chord. As a reader of *Prevention Magazine* for many years, I've watched it evolve into a respectable and responsible publication. In fact, I had it in my waiting room for years.

It is published by a group from Emmaus, Pennsylvania, who gave us the "People's Medical Society" and who have, at times, "roughed up" our profession. Yet, I feel they serve a need, and their emphasis on the prevention aspects of health care cannot and *should not* be ignored.

Some startling statistics are noted in Brinklin's editorial, citing some impressive savings from prevention of disease and promotion of healthy lifestyles. One example is the impressive work of Dean Ornish, MD, of California. He has established a working model of how to live a very healthy lifestyle at a retreat-like setting. Low-fat diets, proper exercise, and stress-relieving sessions are taught and practiced. Dr. Ornish has clearly established that his lifestyle program can reverse coronary disease, opening up blocked arteries. Coronary disease is often linked with emotional stress. Responding with anger, depression, and hostility are danger signals.

We pride ourselves on being our patients' advocates. Let's really live up to that by helping our patients prevent illness, with a pro-active stance!

LETTERS TO THE EDITOR

CHANGE COMING, UNDERSTANDING NEEDED

I am a member of the Pennsylvania Medical Society and also a reader of PENNSYLVANIA MEDICINE. I was somewhat shocked by the strident and angry tone of President Murcek's editorial on page 8 of the May 1994 issue. I certainly do not deny Dr. Murcek's right to his opinion. I feel, however, that his tone was inappropriate for that of the president of a prominent medical organization.

He himself refers to a *Philadelphia Inquirer* editorial as "mean spirited, childish, and hypocritical," as well as "name calling and holier than thou."

Dr. Murcek goes on to talk about totally extraneous affairs, such as the Whitewater matter. In the first place, we don't know what, if anything, is going to come out of Whitewater, and in the second place, what in the world does it have to do with health care? He refers to the First Lady as "Saint Hillary" and finishes by talking about the "ingrates serving as mouthpieces for the Clintons' flawed plan."

I think it is time we forget about all of this overheated language. We must face the fact that we as physicians, as well as other segments of our population, have got to come to some kind of consensus on providing all of the people of our country with a basic set of health benefits, while preserving the integrity of organized medicine. Such language as Dr. Murcek uses in his writings does not help, but rather fans the flames of a public that is already suspicious of physicians' motives regarding this entire issue.

I am not saying that everything that President and Mrs. Clinton have suggested or mentioned is appropriate. It appears that very little of the president's plan will survive in its current form. However, like it or not, major change is coming. We must all go to the table in the spirit of understanding and compromise. We cannot let our anger and overheated, zealous protection of our past prerogatives blind us to the need of meaningful and cool-headed dialogue.

Andrew Newman, MD, JD
Bala Cynwyd

PEDIATRICIANS OFFER THANKS

Thank you for publishing "Project Seeks to Bolster Immunizations,"an article on the Statewide Immunization Information System Project, in the May 1994 issue of PENNSYLVANIA MEDICINE [page 30]. The Pennsylvania Chapter of the American Academy of Pediatrics appreciates this opportunity to educate Pennsylvania physicians about the project.

Over the next several years, we will provide primary care practices with information on the value of "tracking systems" to improve the quality and completeness of primary care. We hope PENNSYLVANIA MEDICINE will play an important role in this dissemination.

Jerold M. Aronson, MD
President, Pennsylvania Chapter
American Academy of Pediatrics
Bryn Mawr

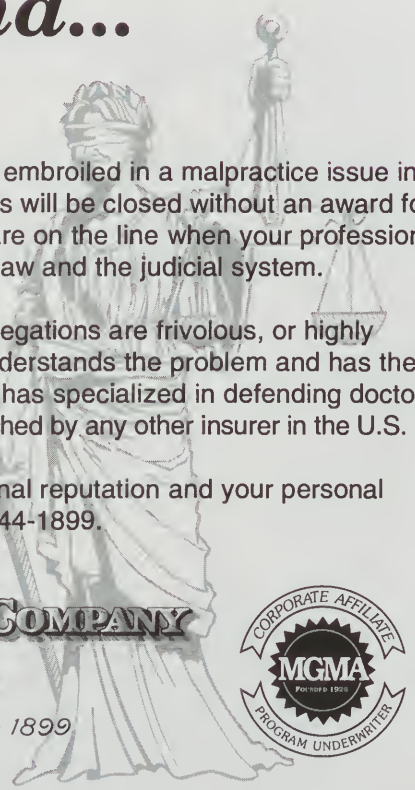
Harrisburg, PA, 17105-8820

...a promise to defend...



HERE ARE THE FACTS: Over 25% of America's Physicians were embroiled in a malpractice issue in the last 12 months. More than 80% of those malpractice allegations will be closed without an award for damages. Your professional reputation and your personal assets are on the line when your professional liability carrier is not both financially sound *and* experienced in the law and the judicial system.

WHEN THE ISSUES ARE LEGAL, NOT MEDICAL — when the allegations are frivolous, or highly emotional — you need a company and legal representation that understands the problem and has the experience to resolve the issue. The Medical Protective Company has specialized in defending doctors since 1899. Our legal and claims management experience is unmatched by any other insurer in the U.S.

FOR MORE INFORMATION on how we can protect your professional reputation and your personal assets, call your local Medical Protective General Agent at 1-800-344-1899.

THE MEDICAL PROTECTIVE COMPANY
FORT WAYNE, INDIANA
Professional Protection Exclusively since 1899

The Power of the Press

Martin A. Murcek, MD

The power of the press—I should know something about it. My son Bud began his career as a reporter at our local paper, the *Greensburg Tribune Review*. He has since moved to a communications firm in Greensburg, but I well remember his days as our young Clark Kent.

The power of the press—I was reminded of it again at the end of March when that same local paper carried a four-part "Special Report" on "bad" doctors. The page one series, which started on a Sunday (the week's most widely read edition) had the physician community in an uproar.

The series examined four different aspects of "bad" doctors: the responsibility of the State Board of Medicine, the problems of impaired physicians and the help available to them, the problems of malpractice and the lack of public access to malpractice information, and ways to improve the "bad-doctor" situation. There were several parts of the series that concerned local physicians, but a few stood out.

First, the reporter seemed to imply that physicians are unwilling to police themselves and weren't concerned about the well-being of the impaired-physician's patients. That's just not true.

Second, the reporter used old cases, most from 10 years ago or more, as examples in his story. They were the same old stories we all know about: Most of the impaired physicians in the story had successfully undergone treatment, and the malpractice cases had been resolved in our legal system.

And last, one of the malpractice examples included a local physician of the highest caliber, a respected member of the Greensburg-area medical community for years. It seemed to imply that the physician was a "bad apple"; nothing could be further from the truth.

The power of the press—I was reminded of it as physicians met in the halls of our local hospital discussing how to respond to an article that they viewed as an attack on our profession, our integrity, and our compassion.

As president of this Society, I immediately wrote a "Letter to the Editor" in response to the series. I'd like to share with you part of that letter, which appeared on the editorial page on Easter Sunday (see text, at left).

The power of the press—I was reminded of it as I read my response on the editorial page and heard my colleagues' thanks at every turn in my hospital rounds the next week. And it reminded me that part of the "power" is in the public's opportunity to respond to what is printed.

I still wish the story had been written differently, more constructively. We all acknowledge that problems do exist. But I'm not a reporter, I'm a physician...a physician who is proud of the work we do and the ideals for which we stand, for our commitment to identifying problems and trying to solve them. But mostly for our dedication to always keeping the welfare of our patients as our first priority. ⬡

Dear Editor: I must respond to your recent special report, "Physician Heal Thyself," which ran from March 20-23. I am concerned that the tone of the story seemed to suggest that physicians aren't concerned about the well-being of their colleagues with substance abuse problems and the resulting well-being of their colleagues' patients. Nothing could be further from the truth.

Doctors are in the business of caring for people, of helping them live their lives to the fullest possible extent. That caring doesn't stop with our own personal patients—it extends to the health of our fellow professionals.

That is why I am proud of the Pennsylvania Medical Society's pioneering Physicians' Health Programs, which provide rehabilitation services to impaired physicians in this state. This effort has been a model for the nation. Many experts who have examined the relatively low rate of disciplinary action against physicians in Pennsylvania believe it is because we do have a quality program that helps physicians correct their substance abuse problems.

Of course, there is no program that reaches all the physicians in trouble, and certainly, there are some [physicians] who are not interested in receiving help. That is why we need a strong State Board of Medicine. The Pennsylvania Medical Society has filed not one, but two separate lawsuits against the state government in an effort to get a mandate that revenue from medical licensing fees be applied to the board's investigation and enforcement efforts. And we would support efforts to further strengthen the board.

Your series carried more than a hint of prejudice against professionals with impairments. It only makes sense that we as a society first assume that they are deserving of the chance to get clean and get on with their lives. And believe me, that is what most of them do. Physicians are as deserving as anyone else to be given that chance, [and we] have been at the forefront of the effort to help our colleagues overcome substance abuse problems and return to safe, productive roles.

ou're on solid ground with the Dodson Plan.

More than 75 years ago, Bruce Dodson, Sr. pioneered the concept of the dividend plan for workers' compensation insurance. Dodson Group has been helping businesses like yours save on premium costs ever since.

The Dodson Plan gives you the opportunity to earn a dividend each year, depending on the claim experience of all insured members. We carefully select those who participate, creating the greatest potential for you to save.

Pennsylvania Medical Society endorsed the Dodson Plan in 1973. Since then, participating members have earned a total of **$2,309,240** in dividends. Share in the savings!

You're on solid ground with Dodson.

NPDB: What Physicians Don't Know Can Hurt Them

Raymond N. Ankney
James A. Coil, MD
Jacob Kolff, MD
Eduardo Esper, MD

A 1993 survey of State Society members finds significant confusion and misunderstanding about the National Practitioner Data Bank.

National Practitioner Data Bank (NPDB) reports have serious ramifications because they are part of privileging, credentialing, and licensing for a physician's entire career. But a recent randomized sampling of 1,410 Pennsylvania Medical Society members in private practice found significant confusion about NPDB.

Eighty-one percent of respondents did not know that denial of initial license application was not a reportable offense. Sixty-nine percent did not know that voluntary entrance into alcohol or drug rehabilitation was not reportable. Seventy-five percent did not know denial of expanded privileges because of lack of clinical competence was reportable. Only 13 percent knew how to obtain their NPDB reports.

The survey suggests physicians have a poor understanding of NPDB, even though these reports can have career-jeopardizing implications.

Misinformation abounds

The random survey, sent in October 1993, found tremendous misinformation about NPDB among physicians: More than 200 respondents believed the NPDB was a registry of licensed physicians; 150 thought it was a registry listing every physician's address, medical school, residency training, and specialty; and 53 respondents asserted it was an FBI registry of physicians with felony convictions.

In regard to access to the data bank, 53 percent of respondents did not know that consumer groups and the general public do not have access to NPDB information, while 46 percent believed colleagues and competitors could review any physician's file (see Table 1, opposite page).

Responding physicians also did not understand the reasons for NPDB reports. Seventy-five percent were unaware that denial of expanded privileges because of lack of clinical competence was reportable, and 33 percent did not know denial of license renewal was reportable. Thirty-seven percent did not know that physicians are reported for malpractice payments and judgments, and 23 percent did not know that adverse actions on privileges, licensures, and society memberships over 30 days are reportable offenses.

Finally, high percentages of respondents incorrectly believed that physicians could be reported for medical record violations, voluntary entrance into alcohol and drug rehabilitation, denial of initial license application, retirement, repeated traffic offenses, and higher-than-expected complication rates (see Table 2, opposite page).

We also were surprised that only a small percentage of physicians knew how to obtain their NPDB reports: Just 13 percent of respondents knew to contact the Health Resources and Services Administration or Unisys, a contractor that runs NPDB, to obtain data bank information.

If you think we're confused...

The survey findings indicate confusion and misinformation about NPDB that could become more important if consumer groups and the general public are given access to NPDB for providers with two or more files, as proposed by the Clinton Administration.[1] Although the general public should have information on substandard practitioners, there are several potential problems with the Clinton proposal.

For example, adverse action rates in New York and Mississippi differ by a factor of 10, while the clinical privilege action rates vary from 0.7 in Illinois to 3.6 in Arizona.[2] Moreover, medical malpractice rates differ for specialties and states. For example, 73 percent of obstetricians/gynecologists have been sued once with the "average" obstetrician reporting eight lawsuits.[3]

Another issue is that the military and Department of Veterans Affairs only report physicians to NPDB if they don't meet

Mr. Ankney is medical editor, Department of Surgery, Conemaugh Memorial Hospital, Johnstown. Dr. Coil is program director of the hospital's General Surgery Residency Program, Dr. Kolff is chairman of the Department of Surgery, and Dr. Esper is the chief general surgery resident.
The authors thank John Davis of the Applied Research Lab at Indiana University of Pennsylvania for his statistical analyses.

the "standard of care." This review process is not offered to civilian physicians. As of June 1992, the 40,000 practicing physicians and residents of the VA system had suffered just two NPDB files.[4]

All of these factors will affect how many NPDB reports a physician has. Will consumers understand that Dr. Smith has no data bank reports because he has been in the VA system for the last four years? Will they comprehend that Dr. Jones doesn't have an NPDB file because she just left residency? Will they know that Dr. Rogers has more reports because he previously worked in a litigious state or an area with an active licensing board?

If the president's proposal is implemented, physicians with two small malpractice settlements could have this information published in the local newspaper. Competitors then could use these data to portray physicians as incompetent. →

Table 1

Access to NPDB

	Yes (%)	No (%)	Not Sure (%)	% Answering Incorrectly

Are physicians reported for denial of license renewal?	269 (67)†	19 (5)	116 (29)	34
Are physicians reported for denial of initial license application?	155 (38)	76 (19)†	173 (43)	81
Are physicians reported for repeated traffic citations?	5 (1)	269 (67)†	129 (32)	33
Are physicians reported for having a higher-than-expected complication rate?	62 (15)	179 (44)†	162 (40)	55

† *correct answer*

This situation is worrisome because the link between malpractice suits and physician negligence is tenuous.

Physicians are urged to understand what constitutes a reportable offense, review the law's due process, and maintain legal counsel when dealing with a malpractice case or adverse action situation.

So, exactly what is NPDB?

The Health Care Quality Improvement Act of 1986 required the Health Resources and Services Administration (HRSA) to establish a national computerized database of physicians and dentists who settle or lose malpractice claims, or who suffer adverse actions on licensure, privileges, and society memberships.[5-9] Four years later, NPDB began collecting information.

Any health care organization, insurer, or self-insured practitioner that paid to settle a malpractice suit after September 1, 1990, was required to report this information to NPDB and the state licensing board within 30 days. In addition, adverse actions on licensure, clinical privileges, and society memberships exceeding 30 days became reportable offenses. NPDB's report lists the practitioner's age; a short description of the diagnosis and treatment; and the settlement, judgment, or adverse action.[10]

HRSA considers residents and interns as trainees in graduate health professions education and generally does not require reporting of adverse actions on privileges and society memberships. Even residents who are fired are not reported to NPDB. Moreover, residents who strike patients have not committed reportable offenses. However, adverse license actions by state medical boards are reportable.[11]

Adverse privilege actions against residents and interns can only be reported in one instance: If the physician practices outside his or her graduate education program. A surgical resident who moonlights in the emergency room and suffers an adverse action as part of a professional review would be reported to NPDB.

The act also mandates that:

- malpractice payments and judgments made because of care provided by residents and interns be reported[12];
- hospitals obtain the data bank files for applicants seeking staff appointments and clinical privileges; and
- hospitals review the data bank files of staff members every two years.[13]

Supporters of NPDB maintain that it prevents poor health care practitioners from relocating and gaining clinical privileges without disclosing prior malpractice payments and adverse actions. One published article reported 6,000 "gypsy" physicians who leave hospitals to avoid disciplinary actions.[14]

The U.S. Department of Health and Human Services surveyed hospital credentialing committees to examine whether NPDB assisted with their reviews. Committee members claimed that 47 percent of reports contained information that physicians or dentists failed to give, and 40 percent of committee members said NPDB reports offered insights into practitioner qualifications that were not available from other sources.[15]

Some medical associations counter, however, that NPDB punishes providers who lose small malpractice cases. The majority of reports, they argue, occur because insurance carriers settle "nuisance suits" for a few thousand dollars. Since the act requires reporting of all settlements and judgments, physicians can provide quality care, but be reported because insurers don't want to risk litigation.[16]

→

Key Survey Results

The survey included 21 multiple choice questions, each worth one point. Statistical analyses examined the relationship of age, years in practice, sex, place of medical school graduation, county residency, and specialty, to NPDB knowledge:

- Physicians under 40 years of age scored a mean of 8.59, physicians aged 41 to 45 years reported a mean of 9.22, and physicians aged 56 years and older had a mean of 8.30.
- Years in practice did not affect physician understanding of NPDB. Physicians who practiced 0 to 10 years had a mean of 8.54, physicians who worked 11 to 20 years had a mean of 9.45, and physicians who served 21 years and greater had a mean of 8.58.
- Male physicians scored a mean of 8.91, while female physicians had a mean of 7.87.
- There were some small, but statistically insignificant, differences by physician specialty.
- U.S. medical school graduates had a mean of 8.71, and foreign medical school graduates had a mean of 9.23.
- Physicians in Philadelphia and Allegheny County, the two largest urban areas in Pennsylvania, scored poorer than physicians from other areas. Philadelphia physicians had a mean of 7.99, Allegheny physicians had a mean of 8.27, and physicians from other counties had a mean of 9.17.
- The only other factor of statistical significance was prior NPDB reports: Physicians who had at least one data bank file scored a mean of 11.06 on the questionnaire, while physicians who did not have a file, or were unsure of their data bank history, reported a mean of 8.58.

Demographics of survey respondents

- 404 physicians covering 47 specialties and 40 counties responded to the survey.
- 119 respondents were under 40 years of age, 163 were aged 40 to 55, and 119 were aged 56 and older.
- 337 respondents were U.S. medical school graduates, and 60 were foreign medical school graduates.
- 354 respondents were male; 48 were female.

What Physicians Need to Know About the National Practitioner Data Bank

State Society experience has shown that physicians may not be fully aware of the National Practitioner Data Bank's policies and procedures until it is too late—until they receive notice of being reported to the data bank. The editors offer the following Q&A, compiled from various Society publications and files, as information for members.

What is the National Practitioner Data Bank (NPDB)?

NPDB was established by the Health Care Quality Improvement Act of 1986, which sought to encourage health care practitioners to identify and discipline those who engage in unprofessional behavior, and to restrict incompetent health care practitioners from moving from state to state without disclosure or discovery of the practitioner's previous incompetent performance.

Opened in September 1990, NPDB collects information on the professional competence and conduct of physicians and other health care practitioners. Reportable information includes: medical malpractice payments, adverse actions on clinical privileges, adverse licensure actions, and adverse actions on professional society memberships.

Who can access data bank information?

Though the information collected is confidential and only released to authorized entities—hospitals and other health care institutions, state licensing boards, and physicians—President Clinton's health system reform plan proposes to open the data bank to the public. The idea distresses the Federation of Medicine, which has voiced several concerns to the data bank even prior to its opening.

What are those concerns?

Among concerns cited by the AMA are:

- *Confidentiality:* NPDB has not established detailed procedures to determine whether a requesting entity meets the statutory prerequisites for access.
- *Excessive collection and retention of nongermane information:* The AMA opposes collection and retention of information on physicians for whom no adverse reports have been received.
- *Medical malpractice payments:* The AMA maintains that settlement of a lawsuit does not necessarily constitute malpractice, and questions the accuracy and consistency in reporting such information.

Further, more than once since 1990, the AMA House of Delegates has voted to urge Congress to dissolve NPDB, so far without success.

While the State Society agrees with many of the AMA's concerns, it has spent a great deal of time educating authorized users of the data bank that NPDB information should be considered together with *other* relevant data in evaluating a practitioner's credentials.

What if a physician disagrees with a data bank report?

To dispute the accuracy of information reported to the data bank, write the reason for the disagreement with the report on the back of the Practitioner Notification Document you receive from the data bank, and return it to NPDB at P.O. Box 6048, Camarillo, CA 93011-6048.

How can a physician find out what information is in the data bank about himself or herself?

To self-query the data bank, submit a Request for Information Disclosure form, available from the data bank, to NPDB at P.O. Box 6050, Camarillo, CA 93011-6050. There is a fee for this service.

What if I have further questions?

NPDB offers a toll-free Data Bank Help Line: (800) 767-6732. Also, members may call the Society's Department of Medical Staff Relations at (800) 228-7823 or (717) 558-7750, ext. 457, for further information.

T. ROWE PRICE TAX-FREE INSURED INTERMEDIATE BOND FUND. This is the *only* no-load intermediate-term fund that offers high tax-free income, extra credit protection, and moderate market risk from a portfolio of insured municipal securities.

Extra credit protection with high tax-free income. As a tax-free investment, this Fund offers the highly taxed investor one of the few remaining ways to shelter income and earn high yields. In today's uncertain economic environment, this Fund can provide added security in two ways:

- The medium-term, 5–10 year average weighted maturity of the Fund lets you earn higher yields than short-term bonds with lower volatility than long-term bonds.
- Insured AAA-rated bonds have minimal credit risk and carry the highest bond rating, insuring timely payment of principal and interest.*

Put our tax-free expertise to work for you. The Fund's managers adhere to a proven strategy of active portfolio management to enhance returns and manage risk. We currently have 18 tax-free funds with more than $5 billion in municipal assets for investors nationwide.

Call for our free report. *The Basics Of Tax-Free Investing* can help you learn more about the benefits of tax-free investing. $2,500 minimum. Free checkwriting. **No sales charges.**

High Tax-Free Income
Free from federal taxes.

New Therapeutic Agents Marketed in 1993

This is the fourth and final in a series of articles overviewing new drugs marketed in the U.S. in 1993.

Daniel A. Hussar, PhD
Remington Professor of Pharmacy
Philadelphia College of Pharmacy and Science

In 1993, the Food and Drug Administration (FDA) approved 25 new molecular entities (NMEs), 23 of which are for therapeutic use and two are diagnostic agents. Eleven of the NMEs for therapeutic use, as well a new biological agent intended for therapeutic use, were both approved and marketed in the United States in 1993. In addition, 11 other NMEs that the FDA approved before 1993 (most in late 1992) were marketed during the year. Thus, a total of 23 therapeutic agents reached the U.S. market for the first time in 1993, a considerably lower number than the 30 new therapeutic agents marketed in 1992 and the record number 31 new agents marketed in 1991. Many of the 13 therapeutic agents approved in 1993 but not marketed before the end of the year have become available in early 1994.

Of the 23 new therapeutic agents first marketed in 1993, 22 are considered in this series. The one agent not reviewed is flosequinan, which was withdrawn from the market after being available only several months because of a concern about toxicity.

This review considers the new agents' most important properties and, when possible, compares them with other available agents with similar properties. When additional information is needed, more comprehensive references and the product literature should be consulted.

Antiasthmatic agent

Nedocromil sodium (Tilade-Fisons; Rhone-Poulenc Rorer) is an anti-inflammatory agent that is administered by oral inhalation for the preventive management of asthma. The actions of the new drug are most similar to those of cromolyn sodium (Intal), although the two drugs are structurally different.

Nedocromil appears to inhibit the activation and release of mediators from various inflammatory cell types associated with asthma such as eosinophils, neutrophils, macrophages, mast cells, monocytes, and platelets. It inhibits the bronchoconstrictor response to challenges such as inhaled irritants, exercise, and cold air, and is effective in reducing the inflammation of the lining of the airways that is associated with asthma. The drug has no bronchodilator, antihistamine, or glucocorticoid activity.

The specific indication for nedocromil is for maintenance therapy in the management of patients with mild to moderate bronchial asthma. The new drug may be particularly useful in asthmatic patients who need the use of a beta-adrenergic agonist bronchodilator (e.g., albuterol [Proventil, Ventolin]) more than three times a week. In the clinical studies, nedocromil was shown to be significantly superior to placebo in relieving symptoms and improving pulmonary function. In allergic asthmatics who are well controlled on cromolyn, there is no evidence that the use of nedocromil instead of cromolyn would provide additional benefit for the patient.

Because nedocromil is not a bronchodilator, it should not be used for the reversal of acute bronchospasm, particularly status asthmaticus. Patients who are being treated with nedocromil who experience asthma episodes should continue use of the drug, unless the patient cannot tolerate inhaled medications.

When administered by oral inhalation, the systemic bioavailability of nedocromil is low, and it is unlikely to cause systemic adverse reactions. Only unpleasant taste occurred significantly more often in nedocromil-treated patients than in placebo-treated patients, and this effect may be lessened by using a pleasantly flavored mouthwash immediately after administration of a dose.

The recommended dosage of nedocromil for symptomatic adults and children 12 years of age and older is two inhalations four times a day at regular intervals to provide 14 mg of the drug per day. In patients who are under good control on four-times-daily dosing, a lower dose can be tried. Nedocromil should first be reduced to a three-times-daily regimen (10.5 mg per day) and then, after several weeks on continued good control, to twice a day (7 mg per day). Nedocromil should be added to the patient's existing treatment regimen (e.g., bronchodilators). When a clinical response to nedocromil is evident, and if the asthma is under good control, an attempt may be made to decrease the concomitant medication usage gradually.

To obtain the optimum benefit of nedocromil therapy, patients should be informed of the importance of administering the medication at the regular interval that is recommended, even during symptom-free periods. Patients should also be instructed regarding the method for administering the drug.

Nedocromil sodium is supplied in a metered-dose inhaler with a plastic mouthpiece. Each inhaler provides at least 112 metered inhalations, and each actuation delivers 1.75 mg of the drug from the mouthpiece.

Gastrointestinal prokinetic agent

Cisapride (Propulsid-Janssen) is a prokinetic agent that restores, normalizes, and increases motility in the gastrointestinal tract. It is structurally related to metoclopramide (Reglan) and shares certain pharmacologic actions with this agent. However, unlike metoclopramide, cisapride is not likely to antagonize dopamine receptors (antidopaminergic action) which has been responsible for certain adverse effects (e.g., extrapyramidal reactions) associated with the use of metoclopramide. The primary mechanism of action of cisapride is thought to be enhancement of the release of acetylcholine at the myenteric plexus.

Cisapride is indicated for the symptomatic treatment of patients with nocturnal heartburn due to gastroesophageal reflux disease (GERD). Nocturnal heartburn in GERD patients is primarily a motility disorder, and hypersecretion of acid is not often a factor. The new drug has been reported in clinical studies to be as effective or more effective than other agents in reducing

nocturnal heartburn, and the following actions are probably responsible for its beneficial effects:

- increases lower esophageal sphincter pressure (LESP) that helps to reestablish the esophageal barrier;
- improves esophageal peristalsis that assists in the clearance of acidic materials; and
- promotes gastric emptying that reduces back pressure on the lower esophageal sphincter.

In other studies, cisapride has also been reported to be effective in reducing other symptoms associated with GERD, as well as in various motility disorders, including reflux esophagitis, gastroparesis, nonulcer dyspepsia, and constipation. Although these are not labeled indications for the drug at the present time, it is anticipated that the indications for cisapride will expand as additional studies are completed. Unlike metoclopramide, cisapride does not exhibit antiemetic activity.

The acceleration of gastric emptying caused by cisapride may affect the rate of absorption of other drugs. For example, the sedative effects of benzodiazepines (e.g., diazepam [Valium]) and alcohol may be potentiated by cisapride, and patients should be advised of this possibility. Patients receiving other drugs that require careful titration should be followed closely; if serum concentrations are being monitored, they should be reassessed. In patients receiving anticoagulants, it is recommended that coagulation times be checked one week after the start and discontinuation of cisapride therapy.

The recommended initial adult dosage of cisapride is 10 mg four times daily at least 15 minutes before meals and at bedtime. In some patients the dosage will need to be increased to 20 mg four times a day. Cisapride capsules are supplied in a 10-mg potency.

Antineoplastic agents

Paclitaxel (Taxol-Mead Johnson Oncology) is a natural product that is extracted from the bark of the Pacific yew tree. Until several years ago, the quantity of the drug that could be obtained was so small that the opportunities to evaluate its use in patients were very limited. However, more recently, primarily as a result of identifying additional sources for the drug and the development of better extraction methods, the supply of the drug has been sufficient to meet the need for clinical use and continuing investigations.

Paclitaxel is poorly soluble in water, and the concentrate in which it is supplied is a nonaqueous solution containing dehydrated alcohol (49.7 percent v/v) and a nonionic surfactant, polyoxyethylated castor oil (Cremophor EL) that is used as a solubilizing agent. This concentrate is diluted with a suitable parenteral fluid prior to intravenous infusion.

The indication for which paclitaxel has been approved is the treatment of metastatic carcinoma of the ovary, after failure of first-line or subsequent chemotherapy. The standard treatment for advanced ovarian cancer is a platinum-based agent (cisplatin [Platinol] or carboplatin [Paraplatin]) plus cyclophosphamide (Cytoxan). In the clinical studies with paclitaxel, about one-fourth to one-third of the patients responded to the new drug (most with a partial response), including some who had developed resistance to platinum-containing therapy. Although many patients have not responded to the use of paclitaxel, the benefit the new drug has provided in a number of patients with advanced or refractory ovarian cancer has been the basis for some to advocate that it be used in first-line regimens (e.g., with cisplatin) in the management of advanced ovarian cancers.

The use of paclitaxel is also being evaluated in the treatment of other cancers such as advanced breast cancer, non-small cell lung cancer, head and neck cancer, and malignant melanoma. However, these are not labeled indications for the drug at the present time.

Like other antineoplastic drugs, paclitaxel causes adverse reactions in a high percentage of patients. Bone marrow suppression (e.g., neutropenia and thrombocytopenia, and the resultant risks of infection and bleeding) is the major dose limiting toxicity and appears to be more frequent and more severe for patients who have received prior radiation therapy. The use of paclitaxel is contraindicated in patients with baseline neutropenia of <1,500 cells/mm^3, and it is recommended that all patients treated with the drug have frequent peripheral blood counts performed.

The use of paclitaxel has been associated with a high incidence (41 percent) of hypersensitivity reactions. Severe reactions characterized by dyspnea, hypotension, angioedema, and generalized urticaria have occurred in two percent of patients and, to reduce the risk of such reactions, all patients who are to be treated with the new drug should be premedicated with a corticosteroid (e.g., 20 mg of dexamethasone [Decadron] orally about 12 hours before and six hours before), antihistamine (e.g., 50 mg of diphenhydramine [Benadryl] intravenously 30 to 60 minutes before), and a histamine H_2-receptor antagonist (e.g., 300 mg of cimetidine [Tagamet] or 50 mg of ranitidine [Zantac] intravenously 30 to 60 minutes before).

It is likely that some of the hypersensitivity reactions experienced are due to the Cremophor EL component of the formulation rather than to paclitaxel. Therefore, the use of paclitaxel is contraindicated not only in patients who have a history of hypersensitivity reactions to the new drug, but also in individuals with a history of such reactions to other drugs that are available in formulations containing Cremophor EL (e.g., cyclosporine [Sandimmune], teniposide [Vumon]).

Peripheral neuropathy was reported in 62 percent of the patients treated with paclitaxel, with four percent of patients experiencing severe neurologic symptoms. When severe symptoms occur, it is recommended that the dosage of paclitaxel used in subsequent courses of therapy be reduced by 20 percent. Other adverse reactions that have been experienced by more than 50 percent of patients include arthralgia/myalgia, nausea and vomiting, and alopecia.

The usual dosage of paclitaxel is 135 mg/m^2 administered by intravenous infusion over 24 hours every three weeks (an alternative regimen of 175 mg/m^2 infused over a three-hour period is being evaluated). The neutrophil and platelet counts, as well as the occurrence of adverse reactions such as peripheral neuropathy, should be evaluated in the determination of the interval between courses of therapy and/or the amount of subsequent doses.

Paclitaxel concentrate is supplied in single-dose vials containing 30 mg of the drug per 5 ml. The concentrate must be diluted prior to infusion, and the diluted solution should be administered through an in-line filter with a microporous membrane not greater than 0.22 microns. Contact of the undiluted concentrate with plasticized polyvinyl chloride (PVC) equipment or devices used to prepare solutions for infusion is not recommended. Diluted paclitaxel solutions should be stored in bottles (glass, polypropylene) or plastic bags (polypropylene, polyolefin) and administered through polyethylene-lined administration sets.

Cladribine (Leustatin-Ortho Biotech), also known as 2-chlorodeoxyadenosine or 2-CdA, is a chlorinated purine nucleoside analog that is structurally similar to fludarabine (Fludara) and pentostatin (Nipent). Although these three purine analogs share certain features, their mechanisms of action and certain of their properties are quite different.

Cladribine is indicated for the treatment of active hairy cell leukemia, as defined by clinically significant anemia, neutropenia, thrombocytopenia, or disease-related symptoms. The new drug represents an important addition to the small group of agents (i.e., interferon alfa-2a [Roferon-A], interferon alfa-2b [Intron A], and pentostatin) that are used in the treatment of this disorder. Cladribine crosses lymphocyte cell membranes and is metabolized to a triphosphate derivative that disrupts cell metabolism and is cytotoxic to both actively dividing and resting cells. Most antineoplastic drugs are active primarily against dividing cells, and the resting cells that escape the action of the drug may be responsible for relapses of the disorder. Because cladribine is cytotoxic against resting as well as dividing lymphocytes, it offers the hope of being more effective than previously available therapies, and some have recommended that it be the drug of choice for patients with hairy cell leukemia that requires treatment.

Although comparative data are very limited, cladribine appears to be at least as effective, and possibly more effective, than the other agents for the treatment of hairy cell leukemia. In addition, the new agent has the advantage of being administered as a single seven-day course of therapy, whereas alpha interferon and pentostatin are administered over longer periods of time and/or as repeated courses of therapy. The single course of treatment with cladribine, in addition to being more convenient, may reduce the risk of adverse reactions.

The most serious adverse reaction associated with the use of cladribine is myelosuppression, which was frequently observed during the first month after starting treatment. Periodic assessment of peripheral blood counts, particularly during the first four to eight weeks, is recommended to detect the development of neutropenia, anemia, and thrombocytopenia, and for early detection of potential sequelae such as infection or bleeding.

In one investigational study in which high doses (four to nine times those recommended for hairy cell leukemia) of cladribine were used as part of a bone marrow transplant conditioning regimen (which also included cyclophosphamide [Cytoxan] and total body irradiation), acute nephrotoxicity and severe, irreversible, neurologic toxicity (paraparesis/quadriparesis) have been reported. However, there have not been any reports of similar reactions with the use of the treatment regimen recommended for hairy cell leukemia.

Cladribine is administered as a single course of treatment by continuous intravenous infusion for seven consecutive days at a dose of 0.09 mg/kg/day. The drug is supplied in single-use vials containing 10 mg (1 mg/ml), and this solution must be diluted with the designated diluent prior to administration. Daily doses are infused continuously over 24 hours, and this procedure should be repeated daily for a total of seven consecutive days. Cladribine has also been prepared as a seven-day infusion which facilitates use with an infusion pump in ambulatory patients.

Agent for ocular disorders

Lodoxamide tromethamine (Alomide-Alcon) is a mast cell stabilizer that is indicated for the topical treatment of the ocular disorders vernal keratoconjunctivitis, vernal conjunctivitis, and vernal keratitis. Vernal keratoconjunctivitis is a noninfectious allergic conjunctivitis involving the cornea and conjunctiva that is characterized by intermittent exacerbations that are often seasonal. The condition is most often experienced by children and young adults, and may be triggered in susceptible individuals by common airborne allergens or contact lenses.

Antihistamines and corticosteroids have been used in the treatment of vernal keratoconjunctivitis, but they have been only partially or temporarily effective in some patients. An ophthalmic solution formulation of the mast cell stabilizer, cromolyn (Opticrom), was effective and widely prescribed. However, this formulation has not been available since 1990 because of manufacturing problems. Since that time, some pharmacists have extemporaneously compounded ophthalmic solutions of cromolyn. With the marketing of lodoxamide, a commercially prepared ophthalmic solution formulation of a mast cell stabilizer is once again available. It is anticipated that an ophthalmic solution of cromolyn will be marketed again once the manufacturing problems are resolved and that an ophthalmic formulation of nedocromil, an analog of cromolyn, will be approved for marketing.

By stabilizing mast cells, lodoxamide prevents the release of histamine and other mediators of an allergic response (e.g., slow-reacting substances of anaphylaxis [SRS-A]). The drug has no intrinsic antihistaminic, vasoconstrictor, cyclooxygenase inhibition, or other anti-inflammatory activity. The new drug is at least as effective as cromolyn in alleviating the symptoms of vernal conjunctivitis and, in one comparative study, lodoxamide was reported to be more effective.

The ophthalmic solution formulation contains lodoxamide tromethamine in a concentration equivalent to 1 mg of lodoxamide per ml (0.1 percent). The recommended dosage for adults and children greater than two years of age is one to two drops in each affected eye four times daily for up to three months.

COMMITTED TO EXCELLENCE

Roche

PRESIDENT'S ACHIEVEMENT AWARD

ROCHE LABORATORIES

presents the winners of the 1993 President's Achievement Award

Please join us in honoring these outstanding Roche representatives who have distinguished themselves by a truly exceptional level of professionalism, performance and dedication to quality health care. Throughout the year, each of these award-winning individuals has consistently exemplified the Roche Commitment to Excellence and we're proud to invite you to share in congratulating them on their achievement.

Asking for Your Help in Maternal and Child Health

Amy K. Dugan
Director of Media Relations
Pennsylvania Medical Society

In a perfect world, every pregnant woman and every child would have access to medical care. Well, it's not a perfect world. Some would argue the problem is access, and some would argue the problem is not taking advantage of the access. Let's put those arguments aside and consider taking advantage of a new program being offered through the state Department of Health which will help us work toward that perfect world. The program is called Maternal and Child Health Outreach, and you can help the program achieve its goal—our goal—healthy babies, healthy moms, and healthy kids.

What's this all about?

The Maternal and Child Health Outreach Program is not a new assistance or reimbursement program; it is a referral network that helps pregnant women and young children take advantage of existing programs to receive prenatal and primary care. The basis of the program is a toll-free help line which pregnant women and parents can call for information on where to get checkups. And to get the word out about this help service, 23 commercials targeting different segments of the population are running on television and radio stations across the state, asking the audience to "Love 'Em with a Checkup."

When people call (800-986-BABY for pregnant women, and 800-986-KIDS for families with children), eight counselors with backgrounds in education, social work, or psychology provide information not only about where to get prenatal or well-baby/kid checkups, but advice on how to pay for them. They answer 50 to 200 calls a day, and to date, more than 20,000 calls have come into the help line. After the initial call, if the caller agrees, the counselor will make a follow-up call to see if the woman or parent was able to make and keep the appointment—and if so, how the appointment went.

How does this affect me?

You can become part of the growing group of doctors, hospitals, and clinics which have agreed to be part of this program. By agreeing, your name is added to the data bank, with any restrictions that you have requested. If a pregnant woman or parent of a young child calls the help line and needs a checkup, and you fit the match, your name may be given as a physician in the area who would see this patient.

The counselors give callers several provider options when available. They also alert callers to the possibility that a provider may not be accepting new patients, and, if that's the case, the counselors are available to help them come up with other options. Remember, this is just a referral program.

The staff from the Maternal and Child Health Outreach Program tell us the ideal provider participants are physicians who accept Medical Assistance patients, especially those who have a presumptive eligibility program or who will accept a sliding fee scale. Currently, those who will provide pediatric care are the most needed, and there are several areas of the state—the northeast, Centre, Westmoreland, Adams, and other more rural counties—where they could use some help.

The current data base contains the names of providers who participate in other state programs. To initiate the program, health department staff contacted approximately 1,000 providers, with whom they had some sort of relationship, to request their participation. Right now, the data base mostly consists of hospitals, but the program has asked the State Society and statewide specialty societies to send a "sign up sheet" to their members in hopes of increasing the data base.

What do I need to do?

If you would like to participate in this referral network, request a Provider Information Survey from the State Society by filling out the coupon on the next page and returning it to the Society at the fax number or address indicated. *When you receive the information form, it is important to note that if you have restrictions on who you will see, there are several places on the form where these can be listed.*

The staff at the Maternal and Child Health Outreach Program have also agreed that you may call them at anytime to change the information in your entry. Call (717) 772-2762, and ask for Program Coordinator Sharon Niesley.

What do the counselors have to say?

The program's telephone counselors are dedicated to this program, committed to helping the most medically needy, and knowledgeable about the system. According to the counselors, about 50 percent of the callers are eligible for Medical Assistance, and a growing number are eligible for the Children's Health Insurance Program (CHIP), since the income and the age eligibility were recently lowered.

Asked their biggest frustration, the counselors agreed: The few times when they've had to tell callers there were no resources in the data bank available to them. One said it was particularly frightening when a caller had an acute problem, and the counselors had difficulty locating a provider who would see her.

Their greatest satisfaction? The family who called April 18 with a daughter with a bladder infection. The girl had a history of bladder problems and kidney infections. The girl's CHIP coverage would kick-in on May 1, but that didn't help a very sick little girl on April 18. A check in the data bank revealed a provider, who gave her the care she needed and was willing to arrange a payment schedule for her.

Or the caller who had a nine-year old who had gotten a spinal infection while in a suburban hospital. Now the mother was pregnant again, and that same hospital was given as a resource for prenatal care. Needless to say, the mother was skeptical of the hospital. The woman needed prenatal care; she had a history of depression and was taking anti-depressant drugs, despite her pregnancy. It took three follow-up calls, but finally the woman went to the hospital for care. And she was completely pleased with the care she received.

Or the report from Polyclinic Hospital in Harrisburg, one of the referral clinics, that it could tell right away when the "Love 'Em with a Checkup" ads air, because their prenatal clinic is busier than ever.

The counselors pride themselves on their holistic approach—being an information referral network and an advocate for these women and children. When asked what results they hope to generate from this "sign-up drive" in PENNSYLVANIA MEDICINE, they said "Any little bit helps."

What does the State Society think?

The State Society supports this referral program and made a commitment to the Department of Health to get this information to members for their consideration. At the kick-off of the help line during an October 1993 press conference at the governor's residence in Harrisburg, then Society President Donald G. Ferguson, MD, thanked those in the crowded room "for working with us to accomplish something that has been a priority of the physicians for many years—getting more pregnant women and children into our offices for care which will give them a healthy start to life!"

Dr. Ferguson also recognized the announcement by the state that in spring 1994 it would begin using the same insurance reimbursement form for Medicaid patients that all other insurers have been using. The State Society had been working toward this initiative for a long time, and the state had agreed to institute it as a way of interesting physicians in taking part in the "Love 'Em with a Checkup" program.

"This will be a tremendous step forward in battling the paperwork crisis that faces today's doctor," Dr. Ferguson said. "And less paperwork gives us more time to do what's most important to all physicians—and that is taking care of people."

Direct any questions about the program to Sharon Niesley at the Department of Health, (717) 722-2762.

Love 'Em with a Check-up
FAX-BACK RESPONSE

Please send me a Program Provider Information Survey so I may lend my name to the Maternal and Child Health Outreach referral network and to the effort to ensure "healthy babies, healthy moms, and healthy kids" in Pennsylvania.

Reaching Out to the Poor

Maureen Hoepfer

Michael A. Moclock, MD, is a board certified family physician who practices part time at the Scranton Primary Health Care Center. He, along with Manuel Fonseca, DO, and Stephen Pascucci, MD, share responsibility for the center's pediatric clinic. The Scranton Primary Health Care Center offers the region's Medical Assistance and indigent populations a full array of medical services, including family medicine, internal medicine, pediatrics, gynecology, and prenatal care. Last year, 6,800 people used the center's services.

Michael Moclock, MD, sees medical practice not as a job or profession, but as a mission. "I look at being a primary care physician as being on a mission, an impossible mission sometimes, but a mission nonetheless," he explains. "Physicians can influence people in changing or modifying unhealthy behaviors. We really can make a difference in their lives."

At the Scranton Primary Health Care Center, Dr. Moclock says he hopes to make an impact on the lives of the children he sees, through educating parents. "To effect a change in behavior, education is extremely important," he says. "I try to sit down with parents and discuss problems or treatments at every visit. I find that parents have many misconceptions about common children's illnesses, and that's why they fail to have their child immunized or follow the prescribed treatment regimen."

Varied patient population

Dr. Moclock says the center takes care of any person who comes in, and the patient population has included a wide range of nationalities: South Vietnamese, Laotians, Cambodians, Mexicans, Haitians, Hispanics, and Soviet Jews. The center also serves the area's large population of migrant workers who pick tomatoes and beans on local farms. "Both the medical care and the housing offered the poor in this region are excellent. We have people coming here from Florida, Mississippi, California, you name it, because the area is well known for its ability to fill your belly, put a roof over your head, and cure your ills," he explains.

Since it opened in 1978, the center has treated thousands of children each year in its pediatric clinic. In 1993, for example, 2,000 children received treatment by the center's physicians. Dr. Moclock says he sees primarily children covered under the Medical Assistance (MA) program or who have no insurance.

Every child who enters the clinic is eligible for the state's Early Periodic Screening Diagnosis Treatment program. The comprehensive program focuses on prevention by screening children in a number of different areas, such as nutrition, dental care, developmental progress, vision, and immunizations. Last October, the center hired a nurse practitioner to oversee the program.

"The screenings allow us to detect problems or potential problems with the children, treat the problem or refer them to specialists if needed, and then keep track of their progress," Dr. Moclock says. "I think we really cover all the bases and do a good job here. The children get good coverage—that's if they come. Because we have such a large transient population, it makes follow-up difficult at times."

Dr. Moclock

Local support

With the help of a grant from the Lackawanna County Medical Society, the Scranton Primary Health Care Center was able to expand its pediatric services from part time to full time in 1992. The pediatric clinic is

Ms. Hoepfer is a marketing associate for the Society's Educational and Scientific Trust. This article is one in a series, begun in January 1993 and ongoing through 1994, sponsored by the Trust's endeavor to address public health needs, Keystones of Public Health.

open Monday through Friday from 9:00 a.m. to 5:00 p.m., with Dr. Moclock and Manuel Fonseca, DO, alternating weeks as the full-time physician on staff. Two mornings each week, Stephen Pascucci, MD, a local pediatrician, also sees patients at the clinic.

In the evenings and on weekends, the center has a coverage agreement with local primary care physicians who admit the center's patients to the hospital if necessary. "The physicians in the area have taken on the responsibility of caring for our patients in the off-hours, and they're doing a good job of it," Dr. Moclock says. "There is never a time when these kids aren't covered."

The beginnings

Dr. Moclock says the Scranton Primary Care Center became a reality because of Martha McAndrew, the center's executive director, and Frances Hazucha, RN, now deceased. The two area women saw a need for a community clinic in 1975 and were instrumental in creating a community task force to examine the problem of caring for the MA and indigent populations in Lackawanna County. The task force was composed of local physicians, nurses, hospital administrators, and community leaders. Representatives from the Lackawanna County Medical Society also served on the task force from the beginning.

The center opened its doors in 1978 after gathering financial support from a variety of organizations, including church groups, the United Way, and the Scranton Area Foundation. It then branched out and was able to secure national grants from the Robert Wood Johnson Foundation, the Kresge Foundation, and the National Campaign for Human Development. Since that time, the center has qualified for Public Health Service grants. It is now a nonprofit corporation governed by a board of directors which meets monthly.

In the beginning, the center's medical staff included two internists and a part-time pediatrician. Since then, it has added a full-time gynecologist and a nurse practitioner. Part-time staff includes a pediatrician, two family physicians, and two social workers. Besides the adult, pediatric, gynecologic, and prenatal clinics, the center also offers complete laboratory testing, a walk-in teenage clinic where adolescents can receive help for medical and psychosocial problems, and an immunization program. For the past three years, the center has sponsored a flu shot program for the elderly in the early fall. Last October, McAndrew says, 700 older persons received flu shots through this program.

With all these services, she says the patients are charged for treatment according to their ability to pay. She explains that the center accepts MA reimbursement, offers free care to the unemployed under a program sponsored by the United Way, and charges other low-income patients on a sliding scale based on the federal poverty guidelines. "No one is ever turned away because of their financial situation," McAndrew says.

Sharing the burden

Dr. Moclock believes the Scranton Primary Health Care Center is a valuable resource for the children in Lackawanna County, but says many other children in the state are not so lucky. "Children make up the biggest population of those living in poverty in the United States," he says. "Many of them suffer unnecessarily because they fail to receive needed medical care."

He says the public does not realize how much free care physicians give to the poor each year, but he believes physicians can do more. "Unfortunately, the reimbursement from Medicaid isn't good, and a practice can go bankrupt from treating a large number of MA and uninsured patients. But I think most practices can absorb treating a small percentage of these patients—say three to five percent." He adds, "If every primary care physician and specialist would agree to care for a small percentage of indigent patients on a regular basis, it would spread out the burden of caring for these patients, and the access problem would ease up."

According to Dr. Moclock, his work at the center has been a worthwhile experience: "It's been satisfying because every now and then I get through to parents and changes will occur that will make a difference in their child's life." He says, "As physicians, our primary goal should not be so much to treat problems as they arise, but to prevent them from happening. There are times when we can do that through educating the patient. Every time we get a chance to talk to our patients about unhealthy behaviors—smoking, poor nutrition, lack of exercise, unsafe sexual practices—we have to do it, because the problems aren't going to go away. There are six billion people on earth, and it's projected to double in the next 40 years. That gives physicians a lot of opportunity to try to change things for the better."

"[Dr. Moclock] says ... the public does not realize how much free care physicians give to the poor each year, but he believes physicians can do more."

Evaluating Ambulatory Care Quality—A Dilemma

John A. Malcolm Jr., MD

One Society member involved in Pennsylvania's data-collection process outlines physician considerations of measuring ambulatory health care quality. This article was prepared for the Pennsylvania Health Care Cost Containment Council as it began its spring discussions, and is offered here by the Society's Task Force on Health Care Cost and Quality Data.

While the overall health of U.S. citizens is strongly dependent on individual lifestyle and informed self-health responsibility, it is also greatly impacted by the access to, use of, and quality of health care at the ambulatory care level. But how can the quality of care in this setting be accurately and efficiently measured?

Because the majority of primary, and much specialty, health care is delivered in the ambulatory setting, appropriate use of care in this setting reduces total health care costs. Early effective treatment of illness often significantly diminishes chances of complications and chronic illness, and preventive care reduces the risk of many serious diseases.

Yet, as the need for ambulatory care services go up, so do the costs for these services. Advances in medical technology have permitted many diagnostic and therapeutic procedures previously done in the hospital setting to be done just as effectively, efficiently, and appropriately in the ambulatory health care setting—often with less cost and inconvenience to the patient. However, because of the continuing shift of more health care to the ambulatory care setting—as well as other factors such as the increasing average age of the population, a growing population, continuing liability-driven defensive medicine practices, and the cost of new sophisticated technology—the overall costs of ambulatory health care are increasing at a rate greater than the general rate of inflation.

Resource utilization review and quality care improvement in ambulatory care have long been a part of physician education; but these are mostly focused on a clinic-type setting in a teaching hospital or medical center. These quality improvement programs focus primarily on improving the *process* of ambulatory health care delivery and require knowledgeable, medically trained staff to abstract and analyze the interrelated financial, delivery process, and medical record data.

Unfortunately, this type of process-focused health care quality improvement program often does not lend itself to use of publishable generic quality measurement data, although some disease-focused reviews do use protocols requiring specific repetitive measurements.

The dilemma

The dilemma is this: How can appropriate, publishable, meaningful data be adapted to measure ambulatory health care quality?

Some disease-focused and some process-focused ambulatory health care quality measurement data can theoretically be gathered, but timely publication becomes a problem because such data are often gathered over an extended period of time with variable intervals between health care delivery visits. While there are no current quality evaluation programs for ambulatory care that publish severity-adjusted comparative reports on cost and quality in the public arena, assessment programs do exist that are disease-specific, include severity of illness evaluation in determining some treatment decisions, and monitor for morbidity during the treatment period.

The difficulty lies in adapting such systems to provide appropriate publishable data with significant meaning. In addition, such an adapted system should not unduly burden health care providers by

Dr. Malcolm, a Sunbury pathologist, is physician representative, Pennsylvania Health Care Cost Containment Council.

requiring substantial additional time, effort, and costs, while providing relatively little benefit over currently used systems. A quick look at a typical process- and disease-focused outpatient quality-of-care assessment methodology may be of some value in understanding the complexity of the problem.

For example, let's consider the comparative process- and disease-focused quality-of-care and severity measurements used in evaluation of outpatient treatment of hypertension (high blood pressure and its sequelae). The process is abbreviated for purposes of simplified illustration and outlined (below) in the series of sequential steps performed. The patient's health care must meet defined quality care standards in each step.

The ultimate goals in such methodologies are improvement in the process and quality of health care delivery, as well as improvement in the outcomes of care. However, a number of related issues must also be addressed.

Currently, outpatient ambulatory care quality assurance programs are required only in licensed health care facilities and organizations such as hospital outpatient clinics, ambulatory surgery facilities, HMOs, etc. The quality assurance/improvement systems and methodologies used to evaluate and improve outpatient care vary widely—hence, comparability of data is a major problem.

If the Pennsylvania Health Care Cost Containment Council wishes to publish outpatient cost and quality-of-care data, both major problems of non-uniform data and limited data sources must be addressed.

Physicians hope that, whatever data is eventually collected and published, it will be reviewed and analyzed by health care professionals, include meaningful outcome statistics, and not unduly burden the health care providers. ⬡

"The dilemma is this: How can appropriate, publishable, meaningful data be adapted to measure ambulatory health care quality?"

An Example

Evaluating Outpatient Treatment of Hypertension

Key

Δ Step includes disease-specific quality-of-care standards to be met.

□ Step includes severity of disease indicators.

O Step may include disease-specific treatment decision factors.

* Step may include disease-specific, patient-specific, and/or treatment-specific morbidity indicators.

Steps performed

Δ□O*—History, physician examination, and office diagnostic testing support the diagnosis of hypertension.

Δ□O*—Initial physician examination and office diagnostic tests include: blood pressure determinations, retinal examination, cardiac auscultation, urinalysis, etc.

ΔO*—Diagnostic workup includes appropriate testing for etiology of the patient's hypertension.

ΔO—Appropriate initial treatment and initial disposition of the patient are made.

ΔO—Appropriate anti-hypertensive, etiologically based treatment is continued, and medications are reviewed regularly until stabilization into normotensive ranges is effected.

Δ□O—Appropriate blood pressure monitoring is performed in the office during initial treatment period until stabilization into normotensive ranges is effected.

ΔO*—Appropriate monitoring for complications and sequelae of hypertension is maintained.

Δ—Appropriate frequency of blood pressure monitoring is maintained after stabilization of the blood pressure into normotensive ranges is effected.

Δ—Appropriate monitoring of medications is maintained after stabilization of the blood pressure into normotensive ranges is effected.

Disposing of Pennsylvania's Low-Level Radioactive Waste

Cherie R. Blazer

Across the country, states face a mounting problem: What to do with the low-level radioactive waste generated within their borders? This article overviews Pennsylvania's recent efforts to answer that question while protecting its residents.

Low-level radioactive waste (LLRW) is the by-product of processes that benefit all of us: the generation of electricity at nuclear power plants, the diagnostic and therapeutic medical procedures performed at our hospitals, and the research at our universities. It is also produced in various industrial applications, such as the development of new drugs by pharmaceutical companies. Despite the obvious benefits we enjoy from these technologies, disposing of this waste presents difficulties in a society that is increasingly adopting a "not-in-my-backyard" sentiment. However, the task has become not whether, but where, to build the disposal facility in Pennsylvania.

Federal legislation has directed each state to take responsibility for its own waste, and to build or obtain access to a LLRW disposal facility. The facilities that have been accepting the waste up to this point are either slated for closure or may no longer accept out-of-region waste.

Low-level radioactive waste is a fact of modern life. It is Pennsylvania's responsibility to find the safest means of disposal for the LLRW our state generates. To fulfill this responsibility, the commonwealth, in an open, public process, contracted the South Carolina-based company, Chem-Nuclear Systems, Inc., to site, design, construct, operate, and eventually close Pennsylvania's LLRW disposal facility. Chem-Nuclear has 23 years of experience operating the largest LLRW disposal facility in the country, located in Barnwell County, South Carolina.

Ms. Blazer is public information specialist, Chem-Nuclear Systems, Inc., Harrisburg.

Why Pennsylvania?

The federal legislation that directed each state to take responsibility for its own waste also encouraged states to form compacts—groups of states which agree to share a regional facility. By forming compacts, states can exclude out-of-compact waste. In response, Pennsylvania, Delaware, West Virginia, and Maryland formed the Appalachian States Compact (see Figure One, next page). Pennsylvania, as the largest generator of LLRW within its compact, will be hosting the facility.

What is LLRW?

LLRW includes items—protective clothing, machinery, lab equipment, and filters and resins—that have been contaminated with radioactive materials. It is also defined by what it is not: It is *not* spent nuclear fuel and fuel rods from nuclear power plants and weapons production. Disposal of these high-level, long-lived wastes is the responsibility of the federal government. Because LLRW is defined in federal and state law, strict regulations prevent disposal of anything else at the Pennsylvania facility.

There are three classifications of LLRW:

- *Class A* waste is the least radioactive, and decays to background or safe levels—equal to or less than the levels of radioactivity normally found in the soil outside a home—in 100 years. It consists largely of protective clothing and similar materials.
- *Class B* waste decays within 300 years and typically includes filters and resins for cleaning contaminated water.
- The highest-activity material disposed of in the facility, *Class C* waste, decays to safe levels within 500 years and includes the metal equipment that has become radioactive during use in a nuclear reactor.

The disposal process

Pennsylvania's LLRW disposal system will be built above the existing ground surface and will use "triple safe" technology, a combination of man-made and natural barriers designed to contain and isolate the waste. Waste will arrive at the facility on trucks in closed transport containers that meet U.S. Department of Transportation or U.S. Nuclear Regulatory Commis-

sion specifications. The waste will be placed inside concrete *overpacks,* sealed with concrete to form a solid structure (see Figure Two, page 28).

The concrete overpacks are then placed in large, thick-walled concrete *cells* that are box-shaped and include four sides, a top, and a floor. Each cell has its own monitoring system. Further protection is provided by an *earthen cap* composed of sand, clay and soils, a polyethylene cover, and topsoil (see Figure Three, page 28). This is a closed system. The only way radioactive materials could escape from this facility is by prolonged contact with water, and the facility is carefully designed to keep water out.

In the past, LLRW was often buried underground, in metal drums or cardboard containers. Problems arose when liquid wastes escaped or water came in contact with the waste, causing radioactive elements to leach into the ground. For these reasons, only dry, solid wastes are accepted at LLRW facilities; no liquid wastes will be disposed at the Pennsylvania facility.

Health and safety

After 30 years of operation, the Pennsylvania LLRW disposal facility is to be turned over to a state custodial agency to provide monitoring and maintenance. Pennsylvania's Low-Level Radioactive Waste Disposal Act (Act 12 of 1988) requires that a long-term care fund be established from surcharges on LLRW disposed of at the facility and provides for a separate $100 million liability fund to protect the host municipality, the county, and the commonwealth.

Act 12 also provides for funding to hire two full-time independent inspectors by the municipality, and two more by the county, who will inspect the facility and have legal authority to shut it down if it is not operating according to specifications. Local police, fire, and ambulance personnel will receive special training and support. Chem-Nuclear will also provide health monitoring for residents living within five miles of the facility during operations.

Although the facility will only operate for 30 years, Chem-Nuclear promises to meet or exceed the safety requirements that have been set out in law. The Pennsylvania LLRW Disposal Act specifies that the design goal of the facility is "zero release" of any harmful materials. This means no negative health effects.

The siting process

The siting process underway in Pennsylvania is among the most stringent in the nation regarding LLRW disposal. As the state is screened for potentially suitable sites, specific criteria—based in law and regulation, and developed with significant public input—are applied to the land areas of the entire commonwealth. These "disqualification" criteria indicate where a facility cannot go—for example, in areas of mines, limestone, or within wildlife or protected area boundaries.

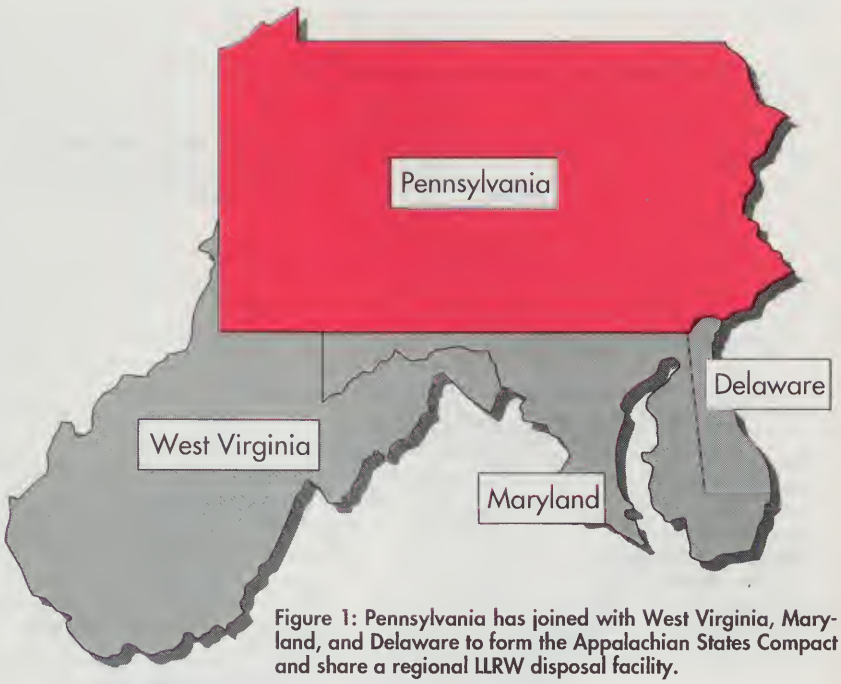

Figure 1: Pennsylvania has joined with West Virginia, Maryland, and Delaware to form the Appalachian States Compact and share a regional LLRW disposal facility.

Disqualification is accomplished in three stages: statewide, regional, and local. At each stage the scale of the maps used to identify disqualified areas becomes more detailed, and particular criteria become visible. The information used to disqualify areas is gathered from publicly available sources, and in cooperation with state and federal agencies. The data are compiled using a highly technical, computer-based geographic information system. At the end of each stage, Chem-Nuclear produces a composite map showing the land areas in the state that have been disqualified from further siting consideration.

After the disqualification process is complete, *evaluation* screening begins, in which both technical criteria and public values are applied to the areas remaining under consideration to identify those most suitable for siting. The results of a random, mailed survey are considered during evaluation. This survey is a crucial element of the process, which allows Chem-Nuclear to determine what factors the public feels are more important when locating a site. →

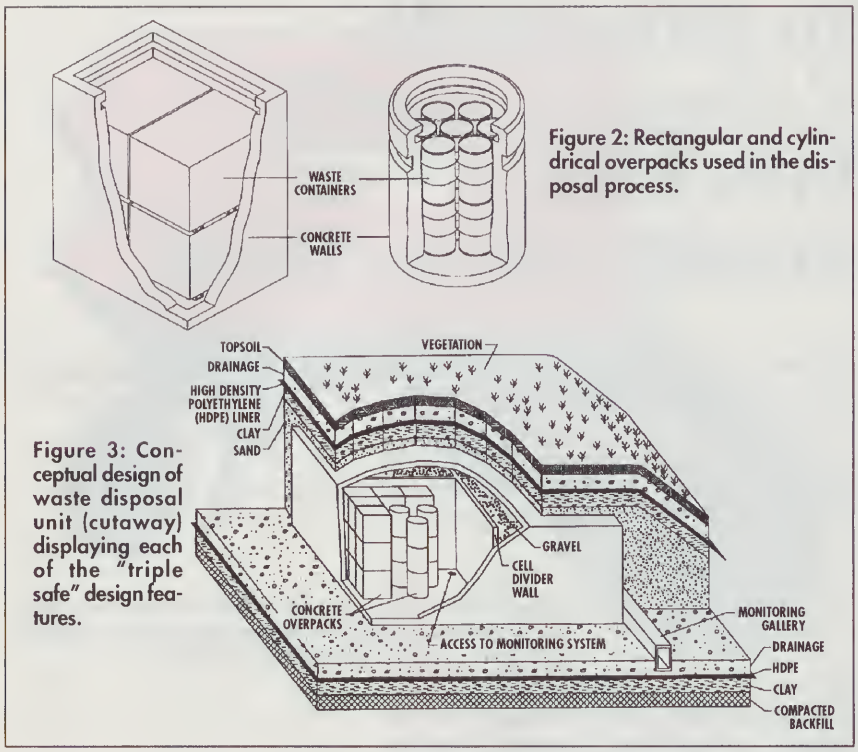

Figure 2: Rectangular and cylindrical overpacks used in the disposal process.

Figure 3: Conceptual design of waste disposal unit (cutaway) displaying each of the "triple safe" design features.

Spokespersons Sought on Radioactive Waste Disposal

Organizations United for Responsible Low-Level Radioactive Waste Solutions is seeking physicians in 11 states, including Pennsylvania, willing to speak to increase awareness and support for the beneficial uses of radioactive materials and the need for responsible solutions for the disposal of these materials.

The goal of the national coalition is to achieve progress on building new waste disposal facilities and preserving the benefits of nuclear technology. Members include the American Medical Association, the American College of Nuclear Physicians, the Health Physics Society, the American Society of Nuclear Cardiology, the Association of American Medical Colleges, and the Society for Nuclear Medicine.

Organizations United will provide necessary training to interested physicians. For more information, call James M. Lyznicki in the AMA's Department of Preventive Medicine and Public Health at (312) 464-4520.

Not until after the evaluation process is complete will three potentially suitable sites of approximately 500 acres each be named. These three sites are then submitted for review to the Pennsylvania Environmental Quality Board (EQB). Upon EQB approval, detailed characterization—on-site inspection and testing—of each of the three sites will aid Chem-Nuclear in identifying a single site for the LLRW disposal facility. The company will then apply to the Department of Environmental Resources (DER) for a license to build the facility. DER is the regulator and contract administrator for this contract.

Pennsylvania law requires Chem-Nuclear to consider, in the siting process, volunteers that may come forward to host this facility. A volunteer site must be brought forward by the governing body of a municipality. Private landowners may not volunteer their property, but are encouraged to contact Chem-Nuclear for information about the project to share with their local elected officials and community. Volunteer municipalities are subject to the same strict siting criteria used to examine the entire state and may not be considered until the process of disqualification is complete.

Project status

Chem-Nuclear completed Stage One and released statewide screening maps in November of 1991. These maps identified 23 percent of the state as disqualified from further siting consideration for Pennsylvania's LLRW disposal facility. Stage Two work was completed in February of 1993, and regional maps showed an additional 23 percent of the state disqualified, for a total of 46 percent.

After the completion of each stage, public meetings were held across the commonwealth to share the results with citizens. These public meetings included project presentations, question-and-answer-sessions, and the opportunity to view the composite maps. The Stage Two public meetings also included interactive workshops, which provided detail on the disqualification and evaluation processes, and gave citizens the opportunity to speak directly with the people doing the work.

At a press conference held May 17 by DER, Chem-Nuclear released the Stage Three (local) disqualification maps, which show approximately 75 percent of the state disqualified from further siting considerations. Throughout May and June, the company held public meetings in Harrisburg, Erie, Altoona, Coraopolis, Williamsport, Wilkes-Barre, and Valley Forge. These meetings provided Pennsylvanians the opportunity to find out about the project, provide feedback to the process, ask questions of the staff members actually doing the siting work, and view the detailed disqualification maps.

Public involvement

Chem-Nuclear's goal throughout the facility development process is to keep Pennsylvanians informed of and involved in project activities. This project places a strong emphasis on citizen involvement, because a knowledgeable public is in the best position to make sound judgments regarding this issue. Chem-Nuclear operates a toll-free information line (800-424-2848) to answer citizens' questions.

In addition to the public meetings held after each stage of siting, the company implements a very active speakers' bureau program and has provided presentations to groups across the state that include local government entities such as county commissioners, township supervisors, and planners; environmental groups; business and industry; community groups such as Lions, Kiwanis, Rotary, church organizations; and educators.

For more information about this issue, call Chem-Nuclear at (800) 424-2848.

SOCIETY TESTIMONY ADDRESSES CON CONCERNS

Richard D. Baltz, MD, a Harrisburg pediatrician and chairman of the State Society's Interspecialty Section, testified in May before the Pennsylvania Department of Health on the proposed Surgical Services Chapter of the State Health Services Plan—a product of the 1992 revision of Pennsylvania's certificate of need (CON) law.

The state's original CON law, enacted in 1979 to help control health care costs by regulating capital construction and minimizing duplication of medical services, required health care facilities to obtain state approval before undertaking major capital projects or introducing new services. The 1992 revision changed the focus of review to clinically related health services.

Under the 1992 law, CON applicants must demonstrate that their plans are consistent with the requirements of the State Health Services Plan, which outlines the degree to which certain services are needed in each region of the state and sets specific criteria for reviewing CON projects. The Surgical Services Chapter is just one of several chapters under consideration by the commonwealth's Health Policy Board, which is responsible to adopt a new plan under the new law.

Dr. Baltz, who testified on this same issue last summer, most recently expressed the Society's concerns about the impact of the proposed chapter "on the commonwealth's efforts to address the difficult task of health system reform." He said, "Reform, we all agree, is necessary to ensure access to affordable, quality health care for all Pennsylvanians. This chapter, however, promotes the status quo of the delivery of surgical services in Pennsylvania.

He explained that the proposed Surgical Services Chapter would require that all applications for development of ambulatory surgical facilities (ASFs) pass a "need" test, and that the Department of Health has projected a *surplus* of operating facilities in all but one planning area, and in the remaining area, there is "no need."

"Given the department's projected need—or lack thereof," he said, "it's quite obvious that the proposed guidelines amount to a notice that 'ASFs need not apply.' This is incredibly short-sighted, particularly since 70 percent of the operating rooms (ORs) used to determine operating room capacity in Pennsylvania are combined-use ORs, not ones specifically designated for ambulatory surgery."

He explained that a significant and continuing growth trend exists in ambulatory surgical care today, primarily driven by pressures to contain costs as well as advances in technology: "Nationally, more and more services are moving from inpatient to outpatient settings, [and] as the Surgical Services Chapter is now written, Pennsylvania will meet the growing demand for outpatient surgery primarily with ORs that are used for both inpatient and outpatient surgery (combined-use ORs), which are clearly less efficient and cost effective" than ASFs.

The Society questioned the advisability of including all Pennsylvania combined-use ORs when determining whether there is a need for outpatient surgery ORs. As Dr. Baltz said: "Considering that 70 percent of current OR capacity is combined-use ORs, we believe the department is promoting the status quo in outpatient surgery and not moving Pennsylvania in the direction of more efficient and cost effective surgery." He also questioned why criteria for ambulatory surgical facilities are "clearly more restrictive" than those for hospital-based outpatient surgical services. "The disparity...discriminates against free-standing ambulatory surgical facilities," he said.

Dr. Baltz urged the department to "rethink" the proposed chapter and recommended that the department "use one-quarter of the combined use ORs in determining the projected shortage or surplus of outpatient ORs in Pennsylvania for the year 2000." He explained: "Doing this will result in a shortage of 76 outpatient ORs in Pennsylvania. This is not a huge shortage, but it will give Pennsylvania the ability to provide health care in a more efficient and cost effective manner. It will give us the opportunity to position ourselves for the future."

Finally, he recommended that the supplementary criteria for ambulatory surgical facilities and hospital-based outpatient surgical services be identical.

Press time update

At press time, the State Health Services Plan had been approved by the State Health Policy Board and signed by the governor. Although the Society's recommendations for revising the proposed Surgical Services Chapter were not utilized, the need formula in the chapter was revised, and the use of hospital-based mixed-use or general purpose ORs for projecting future need for outpatient ORs was addressed.

The surplus of outpatient ORs has been reduced substantially, and a shortage of outpatient ORs is indicated in one region of the state. Also, the projections used in the Surgical Services Chapter are only through 1995—instead of through the year 2000, as originally proposed.

The Department of Health has indicated a willingness to work with the Society to revise the chapter in the coming year.

For more information, call the Society's Department of Medical Staff Relations at (800) 228-7823 or (717) 558-7750.

This article includes excerpts from: Zeik M. What physicians need to know: new state CON law. PA MED 96(3):12-14, 1993.

INSTITUTE WARNS OF RISKS OF NITROUS OXIDE EXPOSURE

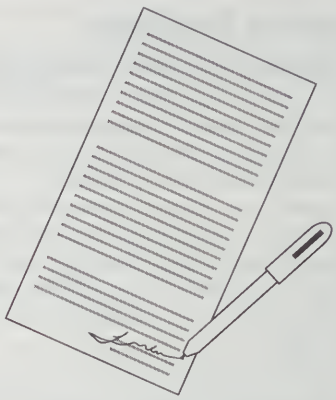
The National Institute for Occupational Safety and Health (NIOSH) has issued a warning to health care workers that exposure to nitrous oxide (N_2O) may cause serious health effects, even with preventive measures such as scavenging systems in place.

Several human studies have shown that occupational exposure to N_2O may cause reduced fertility, spontaneous abortions, and neurologic, renal, and liver disease, as well as documented decreases in mental performance, audiovisual ability, and manual dexterity.

To protect workers from these risks, operating rooms are often equipped with scavenging systems that vent unused and exhaled gas away from the work area. However, a NIOSH alert issued this spring reports that such a system must be continuously monitored to effectively reduce exposure to N_2O.

To request a copy of the alert, call NIOSH at (800) 356-4674.

Before You Sign That Managed Care Contract...



Did you know that contracts from some third-party carriers contain provisions that would impinge on your legal and ethical duties to protect patient confidentiality? Before you sign any contract—and especially one of the many varieties of managed care contracts springing up—read and understand the terms it contains. Consider these items so that you can make an informed decision about what is best for your practice and your patients:

Restrictions on practice

- ☑ Beware of restrictive language that would prohibit you from contracting with additional managed care entities.
- ☑ Be sure the contract gives you the right to reject any new groups of patients or alternate fee arrangements without terminating your right to provide services to existing patients.
- ☑ Beware of the ability of the managed care entity to make unilateral modifications to the contract regarding regulations, compliance, and payments.

Payment terms/fee schedules

- ☑ Negotiate to be sure that the payment amount is adequate—whether you're solo or group, capitation or fee-for-service—before proceeding any further. This will require careful analysis of the economics of your practice.
- ☑ The stated rights of the managed care entity may provide the suspension of reimbursements to providers for a variety of reasons. Know what would or could cause a cessation of payment.
- ☑ Be sure the contract identifies clearly the party or parties responsible for payment, so that you can investigate their financial strength, client base, and reputation.
- ☑ Make sure not only that payment of your fees is required within a specified number of days, but also that there are meaningful incentives for the payer to comply with this rule.
- ☑ Check to see that you are allowed a reasonable time to submit completed bills, and that you're allowed to submit bills after the designated time in circumstances beyond your control.
- ☑ Find out if you can change the fee schedule into real dollars per hour or dollars per procedure.
- ☑ Make sure that, if the contract provides for or contemplates capitation, risk sharing, or withhold arrangements, the descriptions of these are sufficiently clear and detailed to allow you to fully evaluate your risk.
- ☑ If it's a capitated contract, ask yourself if it allows you to increase the amount "per member per month" if the rate of referrals greatly increases.
- ☑ Ask whether you are allowed to bill patients: a) when the managed care organization or the payer fails or is unable to pay, b) for services not covered by the contract, and c) when the payer or managed care organization have determined the proposed services are not medically necessary.

Patient eligibility and care

- ☑ Make sure the managed care organization gives you a detailed, written description of the procedure for verification of patient eligibility and coverage.
- ☑ Read and understand the set of criteria that you must follow, including practice and administrative guidelines. These guidelines are usually established as a required minimum level of performance.
- ☑ Beware of economic penalties for providing treatment outside the realm of established practice guidelines, i.e., if you prescribed a level of care unacceptable to the payer—you pay the patient's bill.
- ☑ Make sure the contract doesn't hold you to a standard of medical practice higher than "a reasonable physician acting under the same or similar circumstances."
- ☑ Make sure that if you're required to provide anything other than medical services—for example, participation in the peer review committee—you have adequate legal protection and reasonable compensation for such activities.
- ☑ Double check if there are any provisions that require you to significantly alter your practice—such as your availability, referral practices, or staffing.

Physician insurance

- ☑ Be cautious about signing a contract that contains an indemnification provision by which you agree to "indemnify" or "hold harmless" the payer. Malpractice insurance policies often exclude liability that the physician assumes as a result of a contract, i.e., a third-party payer.
- ☑ Know whether you're required to obtain more insurance coverage or different types of insurance than your current insurance.
- ☑ Make sure the contract specifies the amount and type of insurance covering the managed care entity's activities, and that you will be covered as an additional insured.

Other clauses and terms

- ☑ Beware of "consent" forms that place an undue reporting requirement on you and/or your staff.

- ☑ Know the credentialing/review process and requirements of the managed care entity.
- ☑ Beware of long-term contracts—three-year to five-year contracts are not unheard of—and be careful of contracts that limit your ability to terminate the contract at will.
- ☑ Look for a definite expiration date, and make sure that neither party can unilaterally amend or cancel the contract—or any related documents such as the fee schedule—prior to that date.
- ☑ Make sure the managed care entity is prohibited from disclosing any information provided by you or about you in connection with any credentialing or peer review deliberations, unless such disclosure is otherwise required by law.
- ☑ Double check that you have received all of the documents which relate to the contract, and all the details about the managed care entity—how long it's been around, it's history, what hospitals and physicians participate, and a list of the primary care physicians.
- ☑ Beware of exaggerated or unclear marketing plans or materials.
- ☑ Triple check that any verbal promises that the managed care entity made to you have been incorporated into the contract.

HCFA PROJECT TO EASE MEDICARE PROCESSING

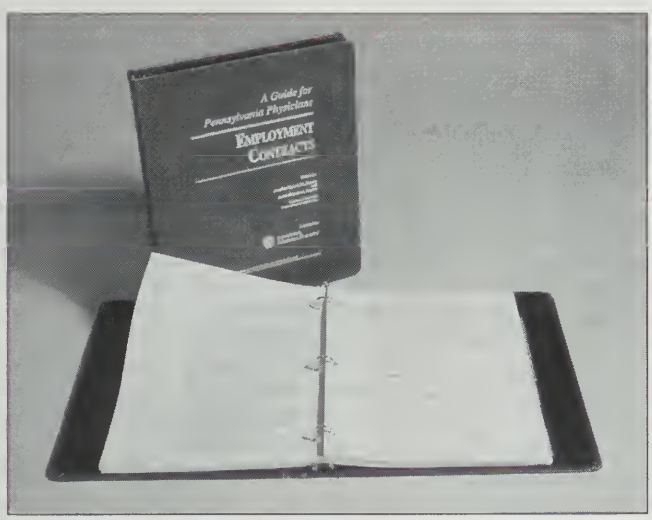
The Health Care Financing Administration (HCFA) has undertaken a six-year, $19 million project that it says will revolutionize the processing of Medicare health claims in the U.S. The project, called the Medicare Transaction System (MTS), will use the most advanced computer technology available to process more than a billion Medicare claims by the year 2000, according to HCFA.

MTS will consolidate in one system the automated claims processing functions currently performed by 79 contractors using 14 claims processing systems to process Medicare claims at 62 sites around the country. HCFA anticipates that legislative and policy changes will be implemented more accurately and reliably, and administrative costs will be cut by as much as $200 million per year.

HCFA adds that the new system will benefit physicians and researchers, as well as beneficiaries:

- The consolidation of claims processing will result in more uniform application of coverage and payment policies, and will make it easier for physicians' offices to connect to Medicare eligibility and other information.
- Better data will be available for researchers studying program trends in health services delivery.
- Beneficiaries can expect improved services from better coordination of benefits and the sharing of information among different insurers, including Medigap carriers.

MTS is currently in the design and development stage. Implementation is expected to begin in 1997, with completion by late 1998. The new system will be government owned, but operated by private companies under contract.



Employment Contracts Guide Offers Timely Advice

Many physicians today are faced with signing employment contracts, either as an employer or an employee. To help physicians make the right contracting decisions, the Pennsylvania Medical Society has published *A Guide for Pennsylvania Physicians: Employment Contracts.*

The 74-page comprehensive manual was designed to assist physicians in understanding, discussing, and negotiating balanced employment contracts with various health care providers. The guide looks at key personal considerations, contracting basics, various contracting arrangements, model contracts, and conflicts of interest. It also reviews and discusses contract language in both employment and independent contractor arrangements.

Employment Contracts is priced at $40 for members and $60 for nonmembers.
To order, call the Society's Department of Physician Services at (800) 228-7823 or (717) 558-7750.

The State Society will also offer a seminar on contracting on October 12 and 13. Look for more details later this summer.

WORKERS' COMPENSATION

FEES DROP, PAPERWORK UP UNDER NEW LAW

Pennsylvania's new workers' compensation law (Act 44 of 1993), enacted exactly one year ago, continues to make headlines throughout the commonwealth. Most recently the *Central Penn Business Journal,* published in Harrisburg, reported that physicians are seeing a decrease in reimbursement and an increase in paperwork as a result of the law.

Doctors are "the main target of the price cap on health care services" in the new law, the journal says, and some have seen compensation go down as much as 30 or 40 percent. Certain specialists—especially orthopedic surgeons and neurosurgeons—have been hardest hit by the reform because of the numbers of workers' comp patients they see.

"Some specialists have decided not to see workers' comp patients at all," the journal reports, "raising questions about whether patients will continue getting adequate access to medical care." Wesley Johnson, executive director of the state House of Representatives Labor Relations Committee, says in the article, "If providers aren't going to treat injured workers, then we've still got a problem."

The new law caps medical provider fees at 113 percent of Medicare allowances. While government officials and insureds say these caps—modeled after similar auto insurance reform of a few years earlier—were necessary to control Pennsylvania's rapidly climbing workers' comp costs, the State Society notes that tying fees to Medicare rates has caused problems, including adding a whole new layer to the reimbursement system.

The Society also notes that problems have arisen from differences in fee schedules and payments from one region to another: "What results is basically an argument between insurer and health care provider over how much the provider should be paid."

In the meantime, family physicians are concerned with bureaucracy issues: The new law requires an injured worker to wait 30 days after an injury before being able to switch from a company-recommended doctor to the family doctor; under the old law, the limit was 14 days. Also, the new law requires that more information be sent from the physician to the employer and the insurance company—thus added paperwork.

This article is excerpted in part with permission from: Cummings E. Doctors say new system is no cure. Central PA Bus J *10(9):1,11, 1994.*

AUTO INSURANCE

SOCIETY SUPPORTING ACT 6 AMENDMENT

The State Society is supporting an amendment to House Bill 2413, which amends Act 6 of 1990, on motor vehicle fiscal responsibility.

The Society has identified a number of problems with the implementation of Act 6, and despite attempts to correct the problems through regulations, many difficulties continue related to the submission of claims for reimbursement for medical services provided under the act. Also, the Society contends that actions of insurers and peer review organizations continue to adversely affect the insured in obtaining needed care and penalize the providers of such care.

The amendment, which introduces standards for the conduct of peer review in evaluating the necessity of care, proposes to:

- prohibit separate contracting between insurers and peer review organizations (PROs);
- require criteria used for PRO evaluation of medical necessity of treatment provided to be openly published;
- prevent PRO evaluations from being used for determination of causation or relatedness;
- require payment of all medical services within 30 days of submission of claim except where necessity of the services provided is challenged;
- limit charges for PRO evaluation to 110 percent of the comparable Medicare consultation/evaluation payment allowance;
- afford all parties all remedies of appeal; and
- require notification of insured of possible limitation of benefits due to determination of medical necessity.

In a letter of support of the amendment to members of the House of Representatives, State Society President Martin A. Murcek, MD, wrote, "The amendment will help to correct the current one-sidedness of portions of the peer review process. It will insure that necessity decisions are based on appropriateness of services and outcome of treatment, and not on the bottom line of coverage limits."

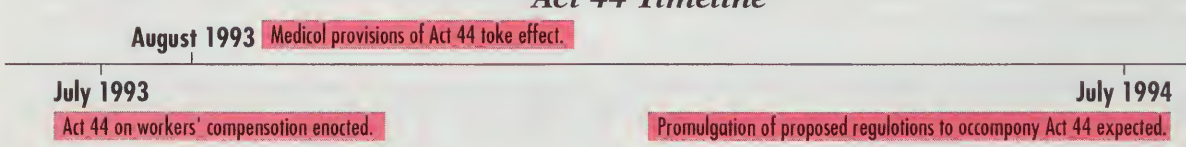
At press time, the bill awaiting House consideration.

Members Urged to Carefully Review Network Contracts

The State Society urges members to carefully review before signing any contracts to join workers' compensation provider networks. The Society warns that while networks may resemble coordinated care organizations (CCOs) authorized under the workers' comp law, they may not be state-approved.

Direct any questions or concerns about this issue to the Society's Department of Regulatory Affairs and Specialty Legislation at (800) 228-7823. Also, see page 34 for more on this topic.

Act 44 Timeline



As the timeline above shows, at press time the State Society was still awaiting promulgation of draft regulations to accompany Pennsylvania's new workers' compensation law. In early 1994, the Society offered the Department of Labor and Industry language on a number of issues related to workers' compensation reform in the commonwealth. We will not know if the department has incorporated any of our suggestions until the draft regulations are released. Look for an update this fall in PENNSYLVANIA MEDICINE.

AMA BOOSTS PATIENT PROTECTION ACT

The American Medical Association (AMA), all 51 state medical societies, and more than 40 national medical specialty societies are supporting the newly introduced Patient Protection Act and its inclusion in any health system reform legislation adopted by the U.S. Congress.

The bipartisan bill, H.R. 4527, was introduced to the House in late May by Representatives Collin Peterson (D-MN) and Wayne Allard (R-CO). Other sponsors include Representatives J. Roy Rowland, MD (D-GA), Ralph Hall (D-TX), and Greg Laughlin (D-TX). Senators Paul Wellstone (D-MN) and Conrad Burns (R-MT) also voiced support of the bill and were expected to introduce it in the Senate at press time.

The Pennsylvania Medical Society—through its Capitol Contacts—in early June urged members of Congress to support the bill which, according to the AMA, "contains four essential elements for guaranteeing freedom of choice and protecting patients from the abusive practices of some insurance companies." Those elements are:

Patient freedom of choice

The Patient Protection Act would require that patients be offered the choice of three insurance options—an HMO or PPO, a traditional insurance plan (with copayments and deductibles), and a benefit payment schedule.

Also, the act would provide patients with an annual opportunity to select a point-of-service option. Available for an added premium, this option provides a patient with insurance coverage even if the patient selects a physician outside of the insurance network or plan.

Disclosure of restrictive insurance policies to patients

Prior to enrollment in an insurance plan, patients would be provided with more complete and easily understandable information about policies that may restrict access to medical services. Insurance companies would be required to describe in simple terms:

- what medical services are covered and included,
- prior authorization or other utilization review requirements,
- financial incentives for health professionals to withhold or limit medical services, and
- restrictions on referrals to medical specialists.

Insurers would be required to disclose the percentage of premium dollars spent on direct patient care services and patient satisfaction data from current and previous enrollees.

Physician selection criteria

Patient freedom to personally select a physician of choice is frequently limited by insurance companies' criteria for network providers.

To expand patient choice of physicians and to protect against arbitrary exclusions of providers, the act would require insurance companies to disclose physician selection criteria. Insurance plans would also be prohibited from terminating a physician contract without cause and would have to provide applicants with all of the reasons for denial of an application or termination of a physician contract. Physicians would also be provided with due process rights for adverse actions by insurers.

Utilization review safeguards

Currently, patients and physicians are kept in the dark regarding insurance company criteria for utilization review and coverage decisions. The act would end this "black box" mentality by requiring advance disclosure of utilization review screening criteria. Medical policies governing coverage and payment would have to be based on sound clinical and scientific data rather than the financial bottom line.

Participating physicians would have a formal mechanism for input on setting insurance plan policies governing credentialing, coverage, quality, and utilization review policies. Patients and physicians would no longer be subject to the hassle of waiting for days to receive prior approval for medically necessary services.

The managed care industry has acknowledged the need to correct the abuses of some insurance plans by establishing a utilization review accreditation process. The act would establish federal standards for utilization review activities and grant deemed status for private sector accreditation programs.

The AMA says these provisions will assure that patients are provided with informed choices in the selection of health insurance coverage and personal physicians. The organization adds that it is critical that all patients be aware of potential limits on their access to medically necessary services as well as the financial obligations attendant to such decisions.

Patient Advocacy Program

The AMA is asking patients to join with physicians in support of the Patient Protection Act. New materials—designed to encourage patients to lobby their senators and representatives to support the act—are available by calling the AMA at (800) 262-3211.

Patient Protection Act Provisions

The Patient Protection Act would entitle patients to:

- A list of covered services—exactly what the plan pays for.
- A list of exclusions—what patients need to pay for themselves.
- Clear instructions on whom to call before a physician can treat them.
- Survey information on how other patients feel about the health plan.
- A choice of three plan options: HMO or PPO, traditional insurance plan, or benefit payment schedule.
- Access to a point-of-service plan—the opportunity to pay extra to see a doctor outside the plan.

To allow physicians to give patients the care they need, the following would also be required of all health plans:

- Plans must allow physicians a voice in medical policy-making.
- No physician could be removed from a plan for giving patients the care they need.
- Practicing physicians would have an essential role in developing criteria to ensure quality patient care.
- Plans would be required to disclose to physicians just who is reviewing their work.

ACTIONS OF THE BOARD OF TRUSTEES, MAY 11, 1994

LEGAL COUNSEL STUDYING WORKERS' COMP REFORM ACT

Physicians are reporting increasing problems with implementation of the medical provisions of the Workers' Compensation Reform Act (Act 44 of 1993)—problems with reporting of services rendered, documentation of services, and delays and other actions by insurers and others to reduce or deny payments. Since efforts to resolve these problems through appeals mechanisms in the statute have proven unsuccessful, the Society's board authorized legal counsel to investigate and report on other action possible to address the problems.

In a report to the board recommending the investigation, the Society's Council on Governmental Relations says appeals have been unsuccessful "due to the tremendous number of complaints and the lack of definitive regulations to clarify ambiguous and confusing language in the law."

The Society has been in regular contact with the bureau about problems since passage of the law last year, but the council says, "Despite an apparent willingness by the Department of Labor and Industry, Bureau of Workers' Compensation to address these problems, insurers act with disregard to the law."

One of the Society's courses of action is to carefully review the regulations as soon as they are published and seek further corrections through those regulations if possible.

Physicians who have encountered problems with the act, but who have not filed a previous complaint, should write to Don McCoy, the Society's director of regulatory affairs and specialty legislation, at P.O. Box 8820, Harrisburg, PA 17105-8820. Please include a complete description of the nature and results of all problems.

For more on this issue, see "Fees Drop, Paperwork Up Under New Law," page 32.

ROLE IN HEALTHCHOICES LAWSUIT UNCERTAIN

The board will further consider the facts of a lawsuit challenging HealthChoices—a new case management and claims processing system for Medical Assistance (MA) recipients in the Philadelphia area—before making a decision about whether or not to join the suit as amicus curiae ("friend of the court"), as recommended by the Philadelphia County Medical Society.

The Hospital Association of Pennsylvania, the Coalition of High Volume Medical Assistance Hospitals, and the Pennsylvania Health Law Project filed the lawsuit against the Pennsylvania Department of Public Welfare for not having promulgated regulations for HealthChoices. A hearing on the preliminary injunction was held in mid-May; at press time, supplemental briefs were being written.

A decision on the case is expected prior to the July 4 holiday. Look for updates in future issues of PENNSYLVANIA MEDICINE and *Executive Report*.

ALTERNATIVES TO UPPING CAT FUND LIMITS DECLINED

As reported in the May issue of PENNSYLVANIA MEDICINE, the Catastrophe Loss Fund (CAT Fund) is supporting a proposed increase in malpractice insurance limits for primary insurance from $200,000 to $500,000. Total mandated insurance coverage would thus increase from $1.2 million to $1.5 million per occurrence.

Amendment of the Health Care Services Malpractice Act (Act 111 of 1975) is required to increase the limits. At the request of the CAT Fund, the Society reviewed proposed amendments and, having several concerns, offered alternatives for consideration; however, none were accepted. The Society has met with the Hospital Association of Pennsylvania to discuss both organizations' concerns on the issue.

At press time, the Society was urging the fund not to pursue any amendments, citing that the limit changes would cause substantial increases for all physicians from all carriers.

BOARD RETREAT TO FOCUS ON PHYSICIAN INVOLVEMENT

The Board of Trustees will gather in Hershey this month to consider the future structure and direction of the State Society. Topping the agenda is a study of ideas from the Society's Task Force to Enhance Physician Involvement.

Created in 1993 to study physician involvement and membership in the Society, the task force early last fall conducted a series of focus groups which revealed a pressing need to clarify the Society's image to Pennsylvania physicians. A follow-up study, conducted this spring, brought into focus a number of membership perceptions and nonmember needs which the board will begin to address at its July meeting.

A wrap-up of the retreat will be published in the September issue of PENNSYLVANIA MEDICINE. A full report of board actions resulting from the

"We are the voice of the American medical profession. We are the partnership of physicians and their professional associations dedicated to promoting the art and science of medicine and the betterment of the public health. We serve physicians and their patients by establishing and promoting ethical, educational, and clinical standards for the medical profession and by advocating for the highest principle of all—the integrity of the physician/patient relationship."

New mission statement approved by the AMA Board of Trustees at its April meeting

retreat or future task force meetings will be presented to the House of Delegates at its annual meeting in October.

OTHER ACTIONS OF THE BOARD

In other action at the May meeting, the board:

- approved funds for the Society to jointly sponsor a health care antitrust seminar later this year. The Society will make funds available subject to contributions from the Pennsylvania Bar Association, the Hospital Association of Pennsylvania, and other proposed cosponsors. Although no date has been set, the Society anticipates the seminar—which will focus on antitrust issues related to integrated delivery systems—will be scheduled in the fall. At press time, a coordinating committee was being formed to plan the seminar. Watch for details later this summer.
- adopted a recommendation of the Task Force on Health System Reform and Access that a letter be written to hospital medical staffs, encouraging them to implement the Society's automated physician referral network system or an alternative system that documents the effectiveness of their efforts.

AMA NEWS

ORGANIZED MEDICINE PREPARES TO REINVENT ITSELF

In a landmark meeting, 162 representatives of county, state, and specialty medical associations, as well as the American Medical Association and other related organizations, on May 26 launched a two-year project to reinvent the house of medicine. The Study of the Federation, initiated by the AMA and supported by Federation members, is an examination of the way in which organized medical societies will be configured to define and meet physician needs, and thus help them serve patients into the twenty-first century.

The initial meeting of the project focused around a deliberative body known as the Consortium, configured especially for this project to reflect the diversity of organized medicine in terms of age, gender, race, practice arrangement, specialty, and type of medical association. Participation on the Consortium, which is scheduled to meet five times over two years, is based upon nomination by sponsoring medical societies. John R. Martell, MD, Young Physician Section representative to the State Society's board of directors, and three other Pennsylvania physicians have been selected to participate on the Society's behalf.

The Consortium used an interactive software technique called IRIS to reach consensus about what organized medicine should look like in the future. Among the issues related to configuration that participants initially identified as critical for the future are: public credibility, responsiveness to diversity within the physician population, trustworthiness, financial stability, and the ability to build strategic alliances.

Between now and the next Consortium meeting in October, significant data collection will be undertaken by outside consultants to create further understanding of physician needs and desires for future organizational consideration.

YOCON®
YOHIMBINE HCl

Description: Yohimbine is a 3a-15a-20B-17a-hydroxy Yohimbine-16a-carboxylic acid methyl ester. The alkaloid is found in Rubaceae and related trees. Also in Rauwolfia Serpentina (L) Benth. Yohimbine is an indolalkylamine alkaloid with chemical similarity to reserpine. It is a crystalline powder, odorless. Each compressed tablet contains (1/12 gr.) 5.4 mg of Yohimbine Hydrochloride.

Action: Yohimbine blocks presynaptic alpha-2 adrenergic receptors. Its action on peripheral blood vessels resembles that of reserpine, though it is weaker and of short duration. Yohimbine's peripheral autonomic nervous system effect is to increase parasympathetic (cholinergic) and decrease sympathetic (adrenergic) activity. It is to be noted that in male sexual performance, erection is linked to cholinergic activity and to alpha-2 adrenergic blockade which may theoretically result in increased penile inflow, decreased penile outflow or both.

Yohimbine exerts a stimulating action on the mood and may increase anxiety. Such actions have not been adequately studied or related to dosage although they appear to require high doses of the drug. Yohimbine has a mild anti-diuretic action, probably via stimulation of hypothalmic centers and release of posterior pituitary hormone.

Reportedly, Yohimbine exerts no significant influence on cardiac stimulation and other effects mediated by B-adrenergic receptors, its effect on blood pressure, if any, would be to lower it; however no adequate studies are at hand to quantitate this effect in terms of Yohimbine dosage.

Indications: Yocon® is indicated as a sympathicolytic and mydriatic. It may have activity as an aphrodisiac.

Contraindications: Renal diseases, and patient's sensitive to the drug. In view of the limited and inadequate information at hand, no precise tabulation can be offered of additional contraindications.

Warning: Generally, this drug is not proposed for use in females and certainly must not be used during pregnancy. Neither is this drug proposed for use in pediatric, geriatric or cardio-renal patients with gastric or duodenal ulcer history. Nor should it be used in conjunction with mood-modifying drugs such as antidepressants, or in psychiatric patients in general.

Adverse Reactions: Yohimbine readily penetrates the (CNS) and produces a complex pattern of responses in lower doses than required to produce peripheral a-adrenergic blockade. These include, anti-diuresis, a general picture of central excitation including elevation of blood pressure and heart rate, increased motor activity, irritability and tremor. Sweating, nausea and vomiting are common after parenteral administration of the drug.[1,2] Also dizziness, headache, skin flushing reported when used orally.[1,3]

Dosage and Administration: Experimental dosage reported in treatment of erectile impotence.[1,3,4] 1 tablet (5.4 mg) 3 times a day, to adult males taken orally. Occasional side effects reported with this dosage are nausea, dizziness or nervousness. In the event of side effects dosage to be reduced to ½ tablet 3 times a day, followed by gradual increases to 1 tablet 3 times a day. Reported therapy not more than 10 weeks.[3]

How Supplied: Oral tablets of Yocon® 1/12 gr. 5.4 mg in bottles of 100's NDC 53159-001-01 and 1000's NDC 53159-001-10.

Considering a Merger? Know Your Assets

The Health Care Group

The changing landscape of American health care has caused many physicians to consider merging their practices. Most physicians recognize that if they sell their practices, they are also selling the assets that are in the practice. The result is a close look at the market value rather than the book value of their assets. In a merger, however, where a physician's practice is being combined with others, a careful review of assets is often not done. This is a mistake.

An example

Suppose Dr. A and Dr. B merge their practices and agree to divide the ownership according to their previous income. Dr. A earned $150,000 and Dr. B earned $250,000. Out of a total income of $400,000, Dr. A earned 37.5 percent and Dr. B earned 62.5 percent. Accordingly, share ownership is divided 37.5 percent for Dr. A and 62.5 percent for Dr. B.

Both Dr. A and Dr. B have net assets worth $100,000 and both contribute these assets to the new practice. Dr. A decides the merger is not working out and wants to leave. Typically, agreements would provide a buyout for Dr. A where his or her proportionate ownership of the net book value of the practice would be paid out. Because Dr. A owns 37.5 percent of the practice, Dr. A would receive 37.5 percent of $200,000, or $75,000, as part of the buyout. Remember that Dr. A contributed $100,000 to the practice. Where did the $25,000 go? To Dr. B.

What to do?

Because physician incomes are often more related to work effort and reimbursement than to the value of assets, do not make ownership proportional to income. Income division can be governed by a separate agreement and closely related to the nature of the practice and wishes of the physicians. Instead, consider making ownership equal. Each merging physician has an equal say in how the practice is run; no one physician has a larger "hammer" with which to beat on the other members. This makes for much better inter-doctor relations and a more successful group.

If the value of the assets are not in proportion to the ownership, which is very likely, then adjust income until it is. Typically, this means that over the first year of the merger, those physicians with net assets in excess of their proportional ownership are paid for the difference by reducing the income of those physicians whose assets are below their proportional ownership share.

At the end of this process, the merged group has an income distribution plan that makes sense for everybody, and a share ownership accurately linked to the net book value that each physician contributed to the practice. Everyone has been treated fairly, and the new group is structured for the future.

What to watch out for

A physician should be aware of the following when focusing on an appropriate value for a practice's assets:

- *Assets that were purchased and written off, but still in use:* Assets that have value should be treated as such, regardless of their historical book value. Internal Revenue Code Section 179 allows thousands of dollars of equipment to be written off for tax purposes, and these assets are typically valued at zero on a practice's books. They should be restated for merger purposes at their fair market or economic value.
- *Assets that are in use, but completely depreciated:* All assets in use should be valued at no less than 20 percent of their cost, and depreciation should be restated to approximate the economic life of the asset. This revaluation process brings all practices to the same basis of asset valuation, and because each practice is treated equally, questions of fairness are minimized or eliminated.
- *Assets that are not typically recorded:* Pre-paid malpractice premiums can represent a significant asset for a practice. This should not be treated as valueless in a merger. Similarly, accounts receivable, payables, and other assets and liabilities should be carefully evaluated. Different mergers handle these items in different ways, but a merging physician should know what these accounts amount to.

In conclusion, merger agreements are almost always customized for the parties involved because of the many issues involved. But, in addition to looking at income division and what the future may hold, physicians considering merging their practices should always be aware of asset issues.

The contributing author, Zvi H. Weinman, MBA, is a consultant with The Health Care Group, a medical practice management consulting firm based in Plymouth Meeting.

MEDICAL SCHOOL NEWS

ABC News Covers MCP Cap and Gown

"ABC Nightly News" covered the Medical College of Pennsylvania's (MCP's) cap and gown ceremonies on May 14 at the Philadelphia Academy of Music, in preparation for a report featuring MCP as the first U.S. medical school to start a women's health curriculum. The ABC report aired in early June.

The 118 members of MCP's class of 1994 completed their medical school training during a time of unprecedented growth and change at the medical school, founded as the first in the nation for women. In the past year, the school has taken the lead in the nation in women's health, establishing the first Institute for Women's Health and the first women's health education program.

MCP spokesperson Eryn Dobeck says, "These efforts are in response to the gender imbalance in traditional medical education and the growing body of knowledge emerging in women's health. Women comprise the majority of health care consumers, and they are demanding equal time in both research in women's health and women's health care."

AIDS and public health expert June Osborn, MD, professor of epidemiology and pediatrics at the University of Michigan, delivered the keynote address at the commencement. David E. Rogers, MD, the first Walsh McDermott University professor of medicine at the New York Hospital-Cornell University Medical Center received an honorary doctorate of medical science, and Edward Stemmler, MD, executive vice president of the Association of American Medical Colleges, received an honorary doctorate of human letters.

MCP reports that 57 percent of its class of 1994 will enter a residency program in a generalist specialty.

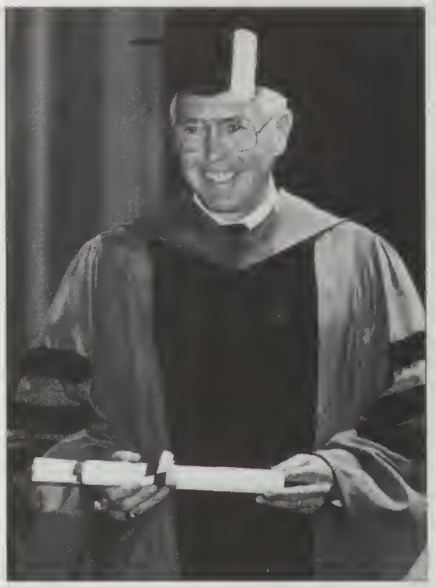
Margaret Delarese Larkins Pettigrew, MD, a member of the University of Pittsburgh School of Medicine's class of 1994, acknowledges the joy and relief of her own accomplishments, as well as her classmates'.

Hahnemann University

David Satcher, MD, PhD, director of the federal Centers for Disease Control and Prevention (CDC), spoke at Hahnemann University's commencement ceremonies on June 3, also at the Philadelphia Academy of Music.

Dr. Satcher, who received an honorary doctorate of science, presented "Revisiting the Dimensions of Excellence," in which he discussed changes in the health care system and medical education.

A total of 92 men and 66 women received medical degrees during the ceremony.



George Bernier Jr., MD, dean of the University of Pittsburgh School of Medicine, presented diplomas to 133 students at the medical school's commencement exercises in May.

Jefferson Medical College

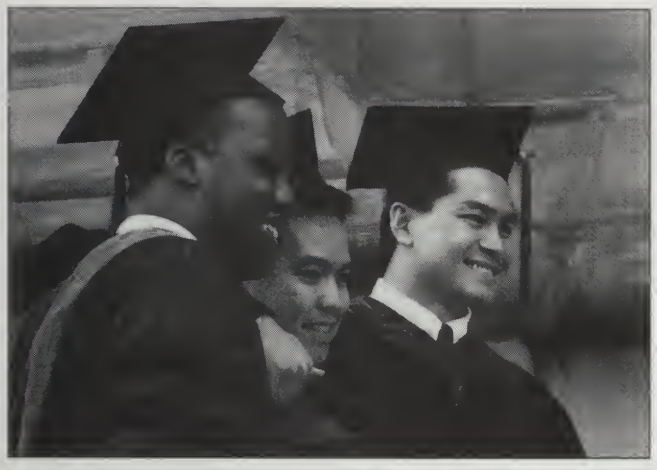
Jerome P. Kassirer, MD, editor-in-chief of *The New England Journal of Medicine*, and Takashi Sugimura, MD, president emeritus of the Japanese National Cancer Center, received honorary doctorates of science at Jefferson's 170th annual commencement on June 10 at the Academy of Music.

During commencement exercises, Thomas Jefferson University President Paul C. Brucker, MD, conferred degrees on 211 students of the medical college. R. Anthony Carabasi III, MD, professor of surgery and of radiology, and director of the Division of Vascular Surgery, served as grand marshal of the event.

Other medical schools

• One hundred and five students—62 men and 43 women—received medical degrees from Penn State's College of Medicine, Hershey, on May 15 at Founders Hall on the campus of the Milton Hershey School. Jo Ivey Boufford, MD, principal deputy assistant secretary of health and chief operating officer of the U.S. Public Health Service, presented the keynote address.

• The Philadelphia College of Osteopathic Medicine conferred DO degrees on 203 students at its



University of Pittsburgh School of Medicine graduates (left to right) Edward Leonard, MD; Dan Nguyen, MD; and Long Le, MD, pose for a photo after receiving their medical degrees in May.

graduation on June 5 at the Academy of Music.

• Temple University School of Medicine, Philadelphia, graduated 162 students, including 104 men and 58 women, on May 24 at the Academy of Music. Temple's class of 1994 dedicated its yearbook to Wallace P. Ritchie Jr., MD, PhD, professor and former chairman of the university's Department of Surgery.

• The University of Pennsylvania School of Medicine, Philadelphia, honored 142 students at its commencement ceremonies, held May 19 at the school's Irvine Auditorium. Samuel O. Thier, MD, president of Brandeis University, was the keynote speaker.

• Eighty-eight men and 45 women received MDs from the University of Pittsburgh School of Medicine on May 23 at Carnegie Music Hall, Pittsburgh. Henry Bahnson, MD, professor of surgery at the university's medical center, presented the main address; Carl Fuhrman, MD, professor of radiology at the medical center, led the students in the Declaration of Geneva; and Elmer Holzinger, MD, chair of the Department of Medicine at St. Francis Hospital, Pittsburgh, offered closing remarks.

RUSSIAN PHYSICIANS VISIT STATE SOCIETY

Twenty-three Russian physicians visited Pennsylvania Medical Society headquarters on May 13 as part of a $44 million project to design and evaluate comprehensive health system reform in the former Soviet Union.

The project, sponsored by the U.S. Agency for International Development, comprises three major strategies in the former Soviet Union:

1) provide technical assistance to test alternative health financing systems;

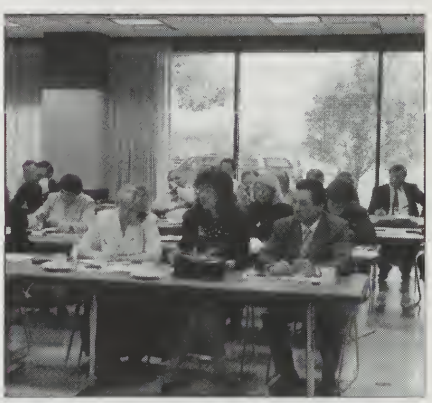
2) provide training for health care workers; and

3) test incentives which would reward increased efficiency and improved quality of health care services.

Donald G. Ferguson, MD, the Society's immediate past president, spoke to the visiting physicians. He began with an overview of the structure and purpose of organized medicine in the U.S., then moved to a discussion of how the U.S. health care system is changing and an explanation of managed care. Important factors in U.S. reform, he said, were controlling health care costs, reforming the legal system, and increasing the numbers and distribution of primary care physicians.

In conclusion, he said, "You stand at an important and exciting time in your history. You have the opportunity to look at the health care systems of many countries, including the U.S., and decide what will work best for your own countries and people. We are honored that you are looking at our system. We hope you will take the best, and leave the rest."

Following Dr. Ferguson's presentation, the Russian physicians met with members of the Pennsylvania Health Care Cost Containment Council to discuss data collection, research, quality assurance, and outcomes measurement; they concluded their day with a meeting with the governor.



Russian physicians learned about organized medicine and U.S. health system reform during a visit to State Society headquarters this spring.

Medical School News

• The Medical College of Pennsylvania inaugurated its 19th president, Leonard L. Ross, PhD, Bryn Mawr, in a ceremony in May.

• The University of Pittsburgh School of Medicine was ranked 18th among research-oriented medical schools in the U.S. by *U.S. News and World Report.* Also, the Pitt Graduate School of Public Health tied for eighth place among schools of public health offering master of public health degrees.

• The University of Pennsylvania School of Medicine, Philadelphia, has been ranked by the National Institutes of Health (NIH) as the fifth leading medical school in the nation in terms of overall federal research funding. The ranking is based on 1993 NIH research awards of $117.6 million.

• Hahnemann University, Philadelphia, has received a two-year, $90,000 grant from the Pew Charitable Trusts, in support of the university's community-based project, "Eating Good: Eating Right." Expanding on the existing family-centered efforts of Hahnemann's Public Health and Preventive Medicine Program, this project will take a hands-on, multidisciplinary approach to helping at-risk families improve the nutrition of mothers and their young children.

• Also at Hahnemann, members of the university's Student Interest Group in Fine Arts recently organized a month-long art exhibition to raise money for the school's Homeless Clinics Project.

COUNTY NEWS

CASEY PLAN GETS HARD TIME AT HEARING

Mercer County physicians and others interested in health system reform gathered at a Senate Public Health and Welfare Committee hearing, on May 26 at Penn State's Shenango Campus in Sharon, to debate the pros and cons of Governor Casey's proposed Health Security Act (Senate Bill 1202).

The governor's plan

R. David Myers, special assistant to the governor, opened the hearing with a 45-minute overview of the governor's plan, which, he said, is aimed at spending health dollars "more efficiently and more effectively." He highlighted several proposed provisions:

- While health care networks would be formed, consumers will continue to have a choice of physicians within the networks.
- A nine-member Health Security Board would develop for all Pennsylvanians a guaranteed benefits package that would include such services as routine doctor visits, preventive care programs, and child immunizations.
- A trust fund would be established to help pay for health coverage for Pennsylvanians who lose their jobs.
- The state would pay health insurance premiums for low-income people.

Panel response

As the nine panel members responded to Myers' presentation, Senator Robert D. Robbins (R-Mercer) moderated the discussion. "Most members of [the] panel...say Pennsylvania's health care system has flaws, but they disagree with the governor's plans for the system's major overhaul," *The Vindicator* of Youngstown reported. "Instead, they favor addressing specific needs within the existing system."

Joseph A. Giordano, MD, an internist from Sharon, was instrumental in planning the hearing and offered a number of statistics which support that America does not have a "broken" system. "President and Mrs. Clinton constantly state America's system is a 'broken' program. If this is true," he asked:

1) Why has infant mortality since 1960 decreased from 26 deaths per 1,000 live births to less than nine in 1991? and

2) Why does the U.S. have the lowest mortality per 100,000 population in bronchitis, myocardial infarction, stroke, and peptic ulcer disease compared to other developed countries?

Dr. Giordano also noted that 14 percent of the U.S. gross national product for health care is not readily converted to other countries since they do not include long-term care, dentistry, or elective procedures such as plastic surgery. He concluded that social issues—poverty, violence, drug abuse, etc.—"must be confronted for they have many health care ramifications."

James A. Jovenall, a Hermitage businessman and health insurance underwriter who recently underwent surgery for cancer, agreed with Dr. Giordano, saying, "This health care system does work. It isn't broken." Jovenall, Dr. Giordano, and several other panelists also had reservations and questions regarding coverage of Governor Casey's liver-heart transplant under the Health Security Act.

William A. Clepper Jr., administrator and chief executive officer of Clepper Convalescent Home, Sharon, called the governor's plan "over-idealistic and unrealistic," and said it lacked long-term care provisions. Joseph T. Morelli, DO, a Stoneboro family practitioner, said he is concerned about added bureaucracy.

Other panel members testifying included Meadville Medical Center President Anthony J. DeFail, and representatives of the insurance industry, labor, and the state pharmaceutical association.

Senator John E. Peterson (R-Venango), chairman of the Senate committee, concluded the four-hour hearing with his thoughts on "Health System Reform—Where Are We Headed?"

COMPLAINTS RECEIVED ON ANTI-ABORTION MAILERS

The State Society has received a number of complaints from Allegheny and Lehigh County physicians who have received anti-abortion postcards, tagged: "Abortion: The Quickest Way to Destroy Your Medical Career." The postcards were sent nationwide and to a variety of unrelated specialties.

While the Pennsylvania Medical Society does not take a position on abortion, it does recognize situations in which physicians may feel threatened or intimidated into performing or not performing a procedure that is legally permitted within parameters defined by federal and state law. Thus, the Society has contacted the U.S. Postal Service and other entities for guidance.

The Postal Service has deemed the cards legal and not personally threatening; therefore, it cannot legally pursue the mailer and cannot intervene at this time. However, it advises that consumers have the right to refuse to accept mail when it is delivered. Or, it adds, "After delivery, you may mark any mail matter, except registered, insured, certified, or C.O.D. mail, 'REFUSED' and return it unopened to the mail stream."

Another alternative for physicians who find the mailings threatening is to have your name removed from the mailing list. To do so, call Dalton Mailing Service at (214) 241-3991. You'll need to provide them with your name, address, and nine-digit zip code as they appear on the mailing label. Physicians may wish to keep previous mailings on file, in case concerns escalate in the future.

The State Society, along with several counties throughout the commonwealth, will continue to monitor the postcards; the Allegheny County Medical Society is collecting such mailings for further investigation.

A portion of this article was excerpted with permission from: Krah JG. Threats against physicians not to be taken lightly. Bulletin *83(6):194, 1994.*

AMA NEWS

SOCIETY RECEIVES DUES REBATE FROM AMA

The State Society has received $111,714 from the American Medical Association (AMA) as a 1994 dues rebate, the continuation of support following unification with the national organization in 1989.

In keeping with Society policy, 50 percent of the rebate was distributed to county medical societies. Seventy-five percent of that amount is for AMA dues reported by January 15, 20 percent for AMA dues reported

between January 16 and February 15, and five percent for AMA dues reported between February 16 and March 15.

PMSLIC OFFERS HOME-STUDY COURSE FOR 1995 DISCOUNT

The Pennsylvania Medical Society Liability Insurance Company (PMSLIC), beginning this month, is offering "Risk Prevention Skills," a home-study program with a specialty section. Physicians who take the program and complete it by the October 14, 1994, deadline will earn a five-percent discount on their 1995 PMSLIC policy premiums and continuing education credits.

A $300 minimum and $1,000 maximum for an annual policy apply to the discount program. For more information and fee information, refer to the July issue of *Executive Report,* or call PMSLIC's Risk Management Department at (800) 445-1212 or (717) 558-7500.

STUDY OF UNINSURED REVEALS NEW INSIGHTS

A study of health care coverage in Pennsylvania confirms that the state's uninsured rate is among the lowest in the nation at 9.8 percent. Of the 980,000 currently uninsured Pennsylvanians, 818,000 are adults, ages 18-64, and 162,000 are children.

In the study, commissioned by the state's Blue Cross and Blue Shield, Pennsylvanians report a variety of reasons for not having health insurance:

- 376,000 cannot afford to purchase health insurance;
- 340,000 are unemployed;
- 215,000 have jobs which do not offer insurance;
- 51,000 do not want or need insurance;
- 39,000 cite that the employee share to purchase insurance is too expensive;
- 32,000 cite that coverage was dropped for health reasons; and
- 27,000 lost insurance when their parents' coverage was terminated or when they graduated from college.

Of the 9,000 state residents surveyed by telephone, 1,000 were identified as being uninsured for some period of time.

Blues recover $6 million

In other Blues news, fraud investigations conducted by Pennsylvania's Blue Cross and Blue Shield plans led to the recovery of more than $6 million in 1993. Anti-fraud specialists announced the recoveries at a recent National Health Care Anti-Fraud Association meeting, hosted by Pennsylvania Blue Shield.

FOUNDATION ACCEPTING 1995 GRANT NOMINATIONS

The Robert Wood Johnson Foundation (RWJF) is requesting nominations for the 1995 Generalist Physician Faculty Scholars Program from deans of four-year medical schools.

The program offers four-year career development awards to outstanding junior faculty in medical school departments/divisions of family practice, general internal medicine, and general pediatrics. The program is intended to strengthen general physician faculty in the nation's medical schools by improving their research capacity while maintaining their clinical and teaching competencies.

Thirty awards were made in the first two years of the program—1993 and 1994. Up to 30 awards will be made during the next two years, with approximately 15 faculty scholars selected each year.

Four-year grants of up to $60,000 annually will be made to sponsoring institutions to help cover the scholar's salary and research costs. Scholars are required to spend at least 40 percent of their time in research and other scholarly pursuits.

For more information and nomination guidelines, call Nancy E. Foster at (202) 687-2937. *Deadline for nominations: September 20, 1994.*

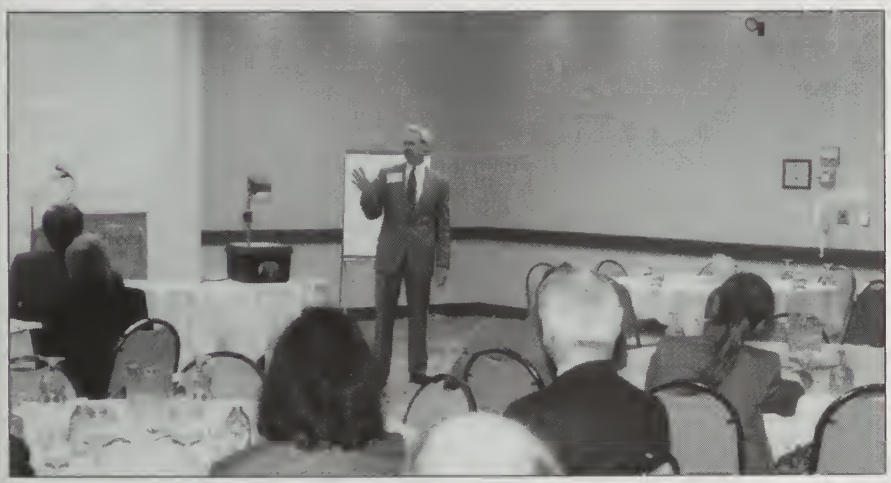
HEALTH INFORMATION AVAILABLE 24 HOURS A DAY

Consumers can now obtain free, published information 24 hours a day, seven days a week, through "AHCPR InstantFax," a multi-line fax-on-demand service operated by the Agency for Health Care Policy and Research (AHCPR).

Publications available through the agency's InstantFax include abbreviated versions of AHCPR-sponsored clinical practice guidelines, summaries of the agency's latest medical outcomes, and other research and announcements.

To access the service: Using a fax machine equipped with a touch-tone telephone handset, dial (301) 594-2800, push "1," and press the start button. AHCPR InstantFax will relay instructions.

DISTRICT NEWS



PHYSICIAN INTEGRATION TOPIC OF MEETING: Approximately 50 physicians attended a Sixth District meeting held in April at Toftrees Resort, State College. Counties represented included Blair, Centre, Clearfield, Huntingdon, Mifflin, and Juniata.

Society Executive Vice President Roger F. Mecum (pictured), the main speaker at the meeting, discussed future health care market trends, why physicians should consider integration, differences in integration models, critical success factors, and how to get started. A Q&A followed the presentation.

If your county medical society, medical staff, or physician group is interested in having a representative from the State Society speak on physician integration options, please call Frani Battista at (800) 228-7823, ext. 449.

KePRO—Looking to the Future

Donald E. Harrop, MD

In an effort to remain viable amidst the unknowns of health system reform and the future, the Keystone Peer Review Organization is broadening its financial base with other types of business interests.

I'm sure that most of the readers of these articles are well aware that the Keystone Peer Review Organization (KePRO) is a wholly owned subsidiary of the Pennsylvania Medical Society. But, I would wager that only a very small percentage know that KePRO is a "for-profit" corporation. This may be quite a surprise to some people, since most PROs and many of the other types of organizations which are under contract to the Health Care Financing Administration (HCFA) are nonprofit. But before anyone starts thinking that this may not be the best way to represent a physicians' membership organization, I would like to explain that there were several reasons for this type of corporate structure.

Dr. Harrop is president of the Keystone Peer Review Organization.

First of all, profit is not a dirty word. It is what this nation was built on. But KePRO was not founded for the purpose of making profits; it was started, as we have said in the past, because the State Society's Board of Trustees felt that as long as there was to be a peer review program, physicians should control it. And, as long as the Society was incorporating this new venture, it might as well attempt to make some money to help offset the need for higher membership dues. (At the time, there were also some tax advantages for our parent company.) And since we began, we have made some money and paid some dividends.

Now, with our HCFA Medicare contract being cut back more and more, and the unknowns of health system reform on the horizon, KePRO is looking to broaden its financial base with other types of business interests. We continue to believe that review of the necessity and quality of health care can and must only be done by physicians. We also feel an obligation to our staff who have done a fine job during the past nine years. Therefore, we intend to stay in business.

We have already been doing some review, separate from Medicare, for several years, including adjudication of disputed cases for the Blues, some workers' compensation review under the new Act 44, and all of the Medicaid review in Florida. But overall, with the exception of Florida Medicaid, these contracts don't amount to a lot of review—certainly not enough to offset the reductions in review volumes for Medicare. So, we knew that we would have to consider KePRO's future potential in light of presently available expertise and resources.

Therefore, the KePRO board and staff have become closely involved in a strategic planning process. We have employed a consulting firm to conduct a market analysis and product development study, and to develop a short-term marketing strategy. Out ultimate goal is to become much less dependent upon our HCFA Medicare contract so that, in the event health system reform is enacted and the role of the PROs is even further diminished, we would remain a viable organization. And yes, we would like to make some profits and continue to pay dividends to the Society in the future.

Quarterly Reports from KePRO Overseers

The House of Delegates, through Resolution 86-44 (Amended), has mandated the Society to provide regular reports on Keystone Peer Review Organization (KePRO) findings. The following report of recently profiled data covers the period January 1 through March 31, 1994.

Inpatient Cases Reviewed: 13,910

	Number of Adverse Decisions	Number of Reviews	Rate
Admission Denials	206	12,652	1.62%
DRG Changes	181	11,825	1.53%
Confirmed Quality Problems	131	13,910	0.94%
Invasive Procedure Denials	5	4,784	0.10%
Day Outlier Denials	5	130	3.84%
Cost Outlier Denials	1	24	4.16%
Days of Stay Denials (Non-PPS Facilities)	0	1,098	0.00%

Ambulatory Surgery Cases Reviewed: 3,842

	Number of Adverse Decisions	Number of Reviews	Rate
Confirmed Quality Problems	303	3,842	7.88%
HCPCS/CPT Pay Group Changes	460	3,842	11.97%
Procedure Denials	60	3,842	1.56%

NEWSMAKERS

Gregory A. Formanek, MD, Hollidaysburg, has been named president of the Blair County Medical Society for a two-year term. Dr. Formanek is medical director for medical oncology, Mercy Regional Health System. He succeeds Andrew W. Gurman, MD.

James J. McKenna III, DO, Clarks Summit, has been elected president of the Lackawanna County Academy of Family Physicians. Dr. McKenna is the assistant medical director for the Geisinger Health Plan, Lackawanna County.

Richard W. Vassallo, MD, chief of cardiology and director of the Heart Station, Nazareth Hospital, Philadelphia, has been named to the hospital's board of trustees.

Zoraida Fiol-Silva, MD, director, Contact Lens Service, Wills Eye Hospital, Philadelphia, has been re-elected to the board of directors of the Contact Lens Association of Ophthalmologists (CLAO), for a three-year term. Dr. Fiol-Silva will be responsible for the control and management of the affairs and business of CLAO.

Mercy Hospital of Pittsburgh has named **Guy M. Stofman, MD,** chief of the Division of Plastic Surgery.

Arthur M. Feldman, MD, PhD, has been named Harry S. Tack professor of medicine, chief, division of cardiology, and director of the Pittsburgh Heart Institute, University of Pittsburgh Medical Center.

Joseph F. Novak, MD, Pittsburgh, received the Pennsylvania Academy of Ophthalmology's Humanitarian Service Award for his pioneering, lifelong effort to promote eye safety in the steel mills of Western Pennsylvania.

The Southwestern Pennsylvania Chapter of the American College of Surgeons has named the following officers: **Jonas T. Johnson, MD,** president; **James T. Hanlon, MD,** vice president and president elect; **Donald P. Atkinson, MD,** secretary; and **Frank T. Vertosick, MD,** and **Gary M. Ferguson, MD,** members of the council.

David B. Soll, MD, Philadelphia, gave three presentations on recent breakthroughs in his research on intraocular lenses at the annual meeting of the American Society of Cataract and Refractive Surgery in Boston, Massachusetts.

Jane Dorval, MD, senior vice president for medical affairs, Good Shepherd Rehabilitation Hospital, Allentown, and division chief of physical medicine and rehabilitation, Lehigh Valley Hospital, Allentown, spoke at a symposium, "Prevention of Secondary Conditions Associated with Spina Bifida and Cerebral Palsy," in Washington, DC.

Gary A. Melada, MD, Pittsburgh, was inducted as a fellow of the American College of Endocrinology.

Elsie R. Broussard, MD, DPH, University of Pittsburgh, was named the 20th Melitta Sperling Memorial Lecturer by the Psychoanalytic Association of New York.

In 1993, the *Philadelphia Business Journal* established Health Care Heroes awards to honor leaders in the local health care profession. These awards single out people, products, and organizations and are open to professionals and volunteers in the health care industry with offices located in New Castle County, Delaware; Burlington, Camden, and Gloucester counties in New Jersey; and Bucks, Chester, Delaware, Montgomery, and Philadelphia counties in Pennsylvania.

There are four categories of awards: most innovative new health care product or service, most significant cost-containment achievement, best accomplishment by primary care doctor, and most effective community health program.

The following are this year's recipients:

- **Joel W. Eisner, MD,** and **Lorraine F. Gutowicz, MD,** were recipients of the primary care physician category.
- *TotalCare* plan of the Keystone Health Plan East was the recipient of the new product or new program category.
- Albert Einstein's *A Better Start* project was the recipient of the community health program category.
- **David J. Shulkin, MD,** was the recipient of the cost-containment category.

Dr. Silberstein

Stephen D. Silberstein, MD, director, Comprehensive Headache Center, Germantown Hospital and Medical Center, Philadelphia, spoke at the Ninth Annual Headache Symposium entitled "Headache in the Decade of the Brain." Dr. Silberstein presented research that suggests definite links between migraines and female sex hormones.

John L. Melvin, MD, vice president, medical affairs, MossRehab Hospital, Philadelphia, gave a lecture on "Trends in Research in Rehabilitation Medicine in the USA" at the 31st Annual Convention of the Japanese Academy of Rehabilitation Medicine in Tokyo, Japan. Also, Dr. Melvin and **John Whyte, MD,** director, Moss Rehabilitation Research Institute, presented a paper entitled "Evaluation of Stroke: A Review" at the Post Congress Seminar on Evaluation of Impairment and Disability in Stroke Patients in Tokyo, Japan.

John P. McLaughlin, DO, clinical associate professor of medicine, Penn State's Milton S. Hershey Medical Center, was named a fellow of the American College of Physicians.

Eugene N. Myers, MD, professor and chairman, Department of Otolaryngology, University of Pittsburgh, was elected president elect of the American Board of Otolaryngology. Dr. Myers will become president in 1996 and will serve a two-year term.

James E. McHugh, DO, vice president of medical affairs, Suburban General Hospital, Norristown, was appointed to the National Board of Osteopathic Medical Examiners.

Philadelphia College of Osteopathic Medicine has named the following students as the recipients of the Christian R. and Mary F. Lindback Foundation Scholarship Award for the 1993-94 academic year: **Darlene L. Haupt; Matthew C. Haley; Eric D. Newman;** and **Robert D. Zenenberg**.

Do you know someone who needs nursing care in their home?

We have a special person to take care of your special person.

Are your patients entitled and/or eligible for Medicare benefits? If you are not sure call **MEDICAL PERSONNEL POOL** and we will help you get the answer. Bear in mind that a person need not be a Social Security recipient or over 65 to receive Medicare services. People who are disabled for 2 years or more are eligible as are people who are in dialysis for 6 months of longer. **MEDICAL PERSONNEL POOL** provides a full range of **HOME HEALTH SERVICES,** as well as private duty nursing. We provide most of these services in the home as well as in the hospital and nursing home.

Debunking a Fabricated Health Crisis

Marwan A. Wehbé, MD

This article is adapted from the Richard I. Burton, MD, Presidential Address, American Society for Surgery of the Hand, Kansas City, September 30, 1993. It was originally published with references in the Journal of Hand Surgery, *March 1994.*

Do the people of this country really want a health care service with the regulatory simplicity of the tax law, the frugality of the Pentagon, the efficiency of the Post Office, and the compassion of the IRS? Consider these facts:

Cost of care

Health care accounts for a small fraction of total business spending—less than four percent by most estimates. Physician fees account for only 19 percent of the dollars spent on health care, a percentage unchanged for the last 25 years! In fact, if doctors lowered their fees by 50 percent, the nation's health care bill would decrease by only two percent.

Consider that 70 percent of the price of a Cessna airplane is for product liability insurance. U.S. litigation costs are 95 percent of the price of DPT vaccine and have enabled foreign competition to seize the market. The U.S. has lost its international lead in contraceptive technology because of product liability.

If we subtract from the health "budget"—which is said to be at 14 percent of GNP—dollars which could be saved with tort reform (25 percent of health budget) and from a $1,000 yearly deductible (30 percent); and then subtract all non-medical costs such as those resulting from violence, drugs, tobacco, and speeding, our health care cost would be well *under* six percent of GNP.

Government control

Can you imagine the tax burden to all citizens and cost to all employers if the government promises that our society will guarantee housing, food, clothing, and health care for all citizens? We have food stamps for the poor, but we do *not* regulate the food prices at stores where the food is purchased.

Physician assistants and technicians cost less than physicians. Wouldn't it be more cost effective to eliminate the physicians altogether, and resign ourselves to care given by technicians and computers? There is also talk of de-emphasizing specialist care. By the same token, there is a push for an increase in primary care physicians, which would save money only if there is less care by specialists—that is, less definitive care for complex problems. *This is called rationing.* Rationing may increase overall society costs from unnecessary disability.

If the housing industry flourished, would we try to ration housing construction? If the Detroit auto industry led the world in innovation, research, and technology, would the government be allowed to take it over and ratchet it down, to force loss of jobs? Is the health care industry a growth industry with the product a healthier population? If so, should it be punished or encouraged?

Citizen control

Society can *save* a great deal by investing in good medical research and good health care. Government should therefore spend more on health care, not less!

Can the government guarantee health care? This is an economic issue, doubtful in itself. *Should* the government guarantee health care? This is a moral issue. Roosevelt stated in 1938: "The only sure bulwark of continuing liberty is a government strong enough to protect the interests of the people, and a people strong enough and well enough informed to maintain its sovereign control over its government."

Today, countries touted as models, such as England and Sweden, are backing away from socialism and starting to privatize. We must preserve the right of each patient to select his or her personal physician and the physician to select the best treatment for that patient. Managed *cooperation*, not managed *competition!* Citizens and patients must realize that they get what they are willing to pay for...with or without government interference.

It's not too late to reverse it all, but we must all act now to stop this madness. We must act as individuals via medical societies and via our patients—especially those influential in government and business, and the elderly. Do not wait to be asked. Step forward, volunteer, take initiative. Time is running out!

Dr. Wehbé is a hand surgeon at the Pennsylvania Hand Center and Bryn Mawr Hospital, Bryn Mawr.

They're seasoned attorneys with an incredible record of success. Malpractice specialists in every medical specialty. More than eighty lawyers in twelve offices: they're part of The P·I·E Mutual team...Jacobson, Maynard, Tuschman & Kalur, a formidable defensive lineup, with an imposing record. With nearly 80% of all claims closed without a penny changing hands. Victory in 90% of the cases that go to trial. The P·I·E Mutual helps you face your future without fear. With a claims review committee made up of your peers. And a prepaid law firm that can rally its total resources against any and all claims. Call us for a reprint of the Medical Economics article. 1-800-228-2335. Tough and smart can soon be yours.

SOMETIMES THE BEST DEAL IS THE ONE YOU HAVEN'T HEARD ABOUT.

Maybe you haven't heard about the Medical Inter-Insurance Exchange (MIIX). After all, we're a relatively new player in Pennsylvania's medical professional liability insurance marketplace.

But ask your counterparts in New Jersey, and you'll find we've been getting rave reviews since we wrote our first policy there in 1977. We're proud that 98 percent of our 9,000 insured physicians renew their policies each and every year. With such an outstanding track record, we must be doing something right.

Perhaps it's our **innovative products**, such as our new **$500,000** HIV benefit that provides income protection — at no additional charge — for physicians who become HIV positive. We were the first professional liability insurer in the state of Pennsylvania to offer this coverage.

Or maybe it's our **commitment to service**, which includes 24-hour customer assistance and a claims staff that's the best in the industry. Our insureds know that MIIX makes sense financially, too, considering our outstanding discounts for new and part-time practitioners. We also offer flexible premium payment plans that help you manage your money.

Because MIIX is a **physician-owned company**, you can be assured that everything we do is designed with your best interests in mind. Call us today so you can join your peers who are already benefiting from the MIIX difference.

PENNSYLVANIA MEDICINE (ISSN 0031-4595) is published monthly by the Pennsylvania Medical Society, 777 East Park Drive, Harrisburg, PA 17111.
SUBSCRIPTIONS: $20 per year–United States and Canada; $30–all others. Single issues $3.00 per copy prepaid; special issues cost more. **POSTMASTER:** Send address changes to PENNSYLVANIA MEDICINE, 777 East Park Drive, PO Box 8820, Harrisburg, PA 17105–8820. Second class postage paid at Harrisburg, PA 17105, and at additional mailing offices.

We'll help you put something unusually strong in your prescriptions.

Complete confidence.

Confidence. Your patients have it in you, but do you have it in the prescription drug information you currently receive?

The Pennsylvania Medical Society recognizes that you need an unbiased, credible source of drug information. That's why we developed the Center for Professional Drug Education and Information. Established for physicians based on recommendations by physicians, the Center offers you a resource on prescription drugs you can trust.

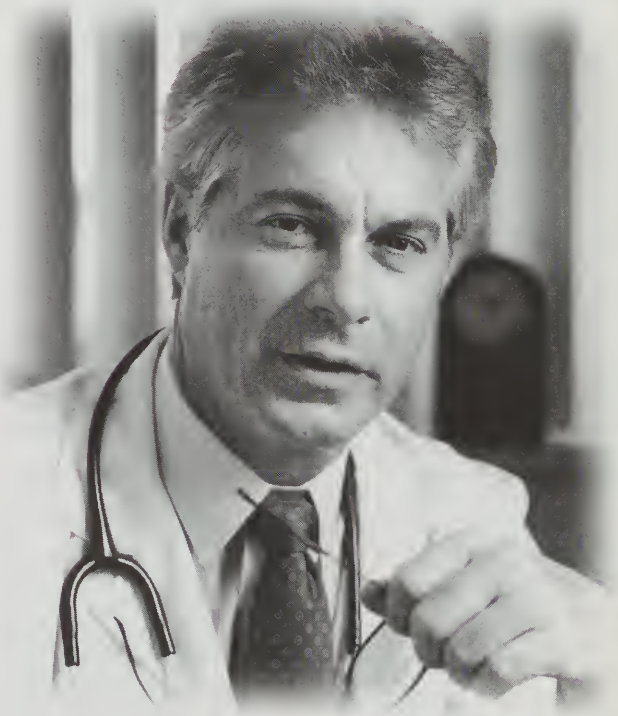
"Unfortunately,

he was already sitting in my examining room. This guy was a walking liability suit looking for a victim. He was angry, non-compliant. It was one of those rare, no-win cases and, well, I guess my number was up.



Then I remembered PMSLIC. So I stepped into the next room and gave them a call. They put me in touch with a member of their Risk Management team, who advised me of the relevant legal issues and the implications of each of my alternatives. Right on the spot. As a result, I was able to make the best medical recommendation with the peace of mind that comes from knowing my legal interests were also protected. I guess that's what it's all about. Peace of mind. The kind you only get from people who really take the time to help. That's excellent service. I'll never change carriers."

SOUND PROTECTION

Choosing a professional liability insurer is a major decision–too important to play by ear.

Princeton Insurance Company's high-quality investment portfolio and our conservative approach to loss reserving have made us the choice of 22,000 in the medical and health care community.

We're not just blowing our own horn. Standard & Poor's has awarded us a claims-paying ability rating of "A."

That's sound protection through financial strength and stability.

Princeton. It's worth it!

PRINCETON INSURANCE COMPANY

ou're on solid ground with the Dodson Plan.

More than 75 years ago, Bruce Dodson, Sr. pioneered the concept of the dividend plan for workers' compensation insurance. Dodson Group has been helping businesses like yours save on premium costs ever since.

The Dodson Plan gives you the opportunity to earn a dividend each year, depending on the claim experience of all insured members. We carefully select those who participate, creating the greatest potential for you to save.

Pennsylvania Medical Society endorsed the Dodson Plan in 1973. Since then, participating members have earned a total of **$2,309,240** in dividends. Share in the savings!

You're on solid ground with Dodson.

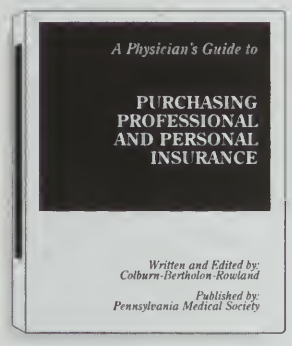
Please refer to each individual program flyer for registration fees, starting times, and number of credit hours. For further information or for copies of individual programs, call Sharon Hanley, RMP, at 1-800-272-6692. There is a 24-hour answering service available. You may also write to her at 100 North Academy Avenue, Danville, PA 17822-1350.

If you're looking for the right group practice coverage, why not ask the people who wrote the book on it?



When they needed to know about insuring you and your group practice, the Pennsylvania Medical Society didn't just want us to act as a guide.

They asked us to write it.

We're Colburn-Bertholon-Rowland (CBR). The endorsed broker for the Pennsylvania Medical Society. And while "A Physician's Guide to Purchasing Professional and Personal Insurance" isn't the catchiest title, if you're up against the complex issues of insuring a group practice, you'll want it on your bookshelf. It deals with everything from life insurance to disability coverage to professional liability insurance. Oh, and health coverage. Homeowner's insurance. Even long-term care. And there's a lot more to it.

Endorsed by the PA Med. Society

And with CBR, there's a lot behind it. We've spent the last 65 years giving doctors our expertise on all forms of insurance and group benefits.

When it comes to individual and group practice insurance, we're the people to call on.

If this sounds like the kind of help you can use, call us at 800-551-4504 (Media) or 800-327-1550 (Pittsburgh). Your CBR rep will do more than give you a hand. The first time you meet you'll receive our book – a $30 value – *free*. And if you want more answers, just ask.

CBR

COLBURN-BERTHOLON-ROWLAND
INSURANCE SERVICES

The Goal Is Not Survival... It's Living.

For individuals facing physical challenges resulting from an injury or illness, surviving and adjusting are just the first steps. The real task lies in overcoming the challenges to rediscover the pleasure of a full life again.

At HEALTHSOUTH Rehabilitation Hospital of Greater Pittsburgh, we offer our patients individualized, goal-oriented treatment plans in both inpatient and outpatient settings based on each patient's specific needs.

Programs include:

- Spinal Cord Injury Rehabilitation
- Head Injury Rehabilitation
- Ventilator Weaning
- Arthritis/Joint Replacement
- Stroke Rehabilitation
- Pain Management
- Orthopaedic/Trauma
- General Rehabilitation

We understand that surviving and adjusting to an injury or illness are just not enough. The real victory lies in enjoying life again.

Wednesday Medical Seminar Series—8:30 a.m. to 3:30 p.m.

SEPTEMBER 21, 1994
Edema, Acid-Base, Electrolyte Disorders, Mechanisms & Treatment of Hypertension
Guest Lecturer:
Neil A. Kurtzman, M.D.

OCTOBER 5, 1994
Tuberculosis
Guest Lecturer:
Michael E. Iseman, M.D.

NOVEMBER 16, 1994
Asthma
Guest Lecturer:
William Busse, M.D.

DECEMBER 1994
To be announced

Seminar Director: Allan B. Schwartz, M.D., Professor and Vice Chair, Chief of Service, Director of Continuing Medical Education for the Department of Medicine

Full Disclosure Statement: All faculty participants in continuing medical education programs sponsored by Hahnemann University are expected to disclose to the audience any real or apparent conflict(s) of interest related to the content of their presentation.

Statement of Accreditation: Hahnemann University is accredited by the Accreditation Council for Continuing Medical Education (ACCME) to sponsor continuing medical education programs for physicians. Hahnemann University designates each hour of attendance at these activities as 1 credit hour of Category 1 of the Physician's Recognition Award of the American Medical Association.

Malachy Whalen & Company guarantees continuity of service

Since 1968, Malachy Whalen and Company has specialized in life and disability insurance for the medical profession. Currently, over 400 professional corporations and 1,700 individual physicians are protected by our programs.

We recognize that continuity of service is the key to earning your confidence... and the referrals, which are the lifeline of our business.

In the area of disability insurance, for example, we have serviced 45 long term claims with 100% satisfaction to the physicians involved. And we are organized to assure that you will receive comprehensive policy service throughout your career.

Malachy Whalen's primary function is to understand the long term business objectives of each practice... to be aware of the physicians' short and long term financial goals... and to recommend the most effective and most economical insurance currently available.

Peggy McNamee and her staff are responsible for policy execution, keeping beneficiary information and other details up-to-date, paying dividends and providing answers about the status of your policies.

Claude Whalen focuses on financial/estate planning and insurance administration. He has attained the C.F.P. designation from the Association of Certified Financial Planners and is licensed in the full line of life and disability insurance as well as N.A.S.D. licensed for equities sales.

Clark Whalen's responsibilities include fundamental counseling in the insurance options that are most appropriate for medical students, resident physicians and new physicians entering practice. He also works closely with practice managers to establish group benefit programs.

Continuity of service means that Malachy Whalen and Company will be there to act on your behalf when claims occur. We will file the required documentation and follow-up to assure timely payment.

Cardiology Update

designed for the physician and provides an intensive survey of the current status of clinical cardiology . . .

Wednesday, September 7, 1994 3:00-5:00 PM

Office Cardiology: Bedside Diagnosis of the Cardiac Patient–Part I

Moderator: Bernard L. Segal, M.D.

Patients will be presented with interesting clinical findings. Carotid and jugular venous pulsation will be analyzed. The precordium will be palpated to determine abnormal impulses. Heart sounds and murmurs will be interpreted in light of the patient's symptoms and the clinical findings. Stethophones will be available at each seat so that the audience will be able to hear and interpret these findings.

The P·I·E Mutual has now entered the state of Pennsylvania. And whenever we come into a state good sense comes along, nonsense exits. Stability returns to the medical liability insurance market. In nine states 17,000 of our member-insured doctors have been enjoying the new cost climate. Protected by one of the largest medical professional liability monoline insurance companies in America. And defended by a firm of medically savvy litigators who close almost 80% of cases without payment. And, year in and out, win 90% of cases that go to trial.

For information, call 1-800-228-2335.

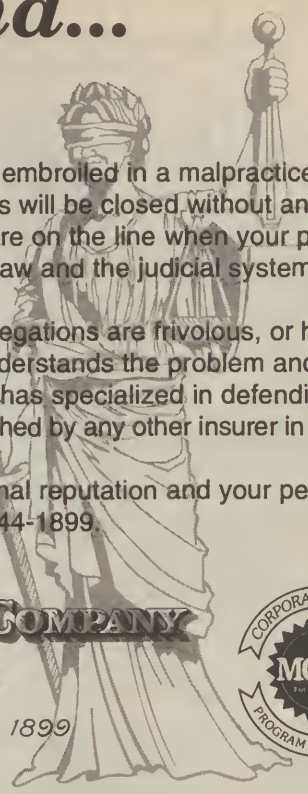
...a promise to defend...



HERE ARE THE FACTS: Over 25% of America's Physicians were embroiled in a malpractice issue in the last 12 months. More than 80% of those malpractice allegations will be closed without an award for damages. Your professional reputation and your personal assets are on the line when your professional liability carrier is not both financially sound *and* experienced in the law and the judicial system.

WHEN THE ISSUES ARE LEGAL, NOT MEDICAL — when the allegations are frivolous, or highly emotional — you need a company and legal representation that understands the problem and has the experience to resolve the issue. The Medical Protective Company has specialized in defending doctors since 1899. Our legal and claims management experience is unmatched by any other insurer in the U.S.

FOR MORE INFORMATION on how we can protect your professional reputation and your personal assets, call your local Medical Protective General Agent at 1-800-344-1899.

YOCON®
YOHIMBINE HCl

Description: Yohimbine is a 3a-15a-20B-17a-hydroxy Yohimbine-16a-carboxylic acid methyl ester. The alkaloid is found in Rubaceae and related trees. Also in Rauwolfia Serpentina (L) Benth. Yohimbine is an indolalkylamine alkaloid with chemical similarity to reserpine. It is a crystalline powder, odorless. Each compressed tablet contains (1/12 gr.) 5.4 mg of Yohimbine Hydrochloride.

Action: Yohimbine blocks presynaptic alpha-2 adrenergic receptors. Its action on peripheral blood vessels resembles that of reserpine, though it is weaker and of short duration. Yohimbine's peripheral autonomic nervous system effect is to increase parasympathetic (cholinergic) and decrease sympathetic (adrenergic) activity. It is to be noted that in male sexual performance, erection is linked to cholinergic activity and to alpha-2 adrenergic blockade which may theoretically result in increased penile inflow, decreased penile outflow or both.

Yohimbine exerts a stimulating action on the mood and may increase anxiety. Such actions have not been adequately studied or related to dosage although they appear to require high doses of the drug. Yohimbine has a mild anti-diuretic action, probably via stimulation of hypothalmic centers and release of posterior pituitary hormone.

Reportedly, Yohimbine exerts no significant influence on cardiac stimulation and other effects mediated by B-adrenergic receptors, its effect on blood pressure, if any, would be to lower it; however no adequate studies are at hand to quantitate this effect in terms of Yohimbine dosage.

Indications: Yocon® is indicated as a sympathicolytic and mydriatric. It may have activity as an aphrodisiac.

Contraindications: Renal diseases, and patient's sensitive to the drug. In view of the limited and inadequate information at hand, no precise tabulation can be offered of additional contraindications.

Warning: Generally, this drug is not proposed for use in females and certainly must not be used during pregnancy. Neither is this drug proposed for use in pediatric, geriatric or cardio-renal patients with gastric or duodenal ulcer history. Nor should it be used in conjunction with mood-modifying drugs such as antidepressants, or in psychiatric patients in general.

Adverse Reactions: Yohimbine readily penetrates the (CNS) and produces a complex pattern of responses in lower doses than required to produce peripheral a-adrenergic blockade. These include, anti-diuresis, a general picture of central excitation including elevation of blood pressure and heart rate, increased motor activity, irritability and tremor. Sweating, nausea and vomiting are common after parenteral administration of the drug.[1,2] Also dizziness, headache, skin flushing reported when used orally.[1,3]

Dosage and Administration: Experimental dosage reported in treatment of erectile impotence.[1,3,4] 1 tablet (5.4 mg) 3 times a day, to adult males taken orally. Occasional side effects reported with this dosage are nausea, dizziness or nervousness. In the event of side effects dosage to be reduced to ½ tablet 3 times a day, followed by gradual increases to 1 tablet 3 times a day. Reported therapy not more than 10 weeks.[3]

How Supplied: Oral tablets of Yocon® 1/12 gr. 5.4 mg in bottles of 100's NDC 53159-001-01 and 1000's NDC 53159-001-10.

FFICIAL CALL TO 1994 MEETING

The 1994 annual meeting of the House of Delegates of the Pennsylvania Medical Society will be called to order at the Hershey Lodge and Convention Center, Hershey, Pennsylvania, on Friday, October 21, at 10:00 a.m. The second session of the House is scheduled for Saturday, October 22, at 1:00 p.m., and the concluding session is Sunday, October 23, at 9:30 a.m.

ELECTIONS

In accordance with Chapter XII, Section 1 of the Bylaws of the Pennsylvania Medical Society, the following nominations and/or elections will be in order. Nominations for AMA delegates will be in order at the first session on Friday morning, October 21, 1994, and elections will occur on Saturday, October 22, 1994. Nominations for all other offices will be in order at the second session, Saturday afternoon, October 22, 1994, and elections will occur on Sunday morning, October 23, 1994.

General officers to be elected are a vice president, a speaker of the House of Delegates, and a vice speaker of the House of Delegates.

In accordance with Chapter XIV, Section 5 of the Bylaws, elections will be in order for a trustee for the Sixth District to succeed Edward H. Dench Jr., MD, Centre County, who is eligible for reelection; a trustee for the Seventh District to succeed William R. Beltz, MD, Lycoming County, who is eligible for reelection; a trustee for the Tenth District to succeed John W. Lehman, MD, Beaver County, who is eligible for reelection; a trustee for the Twelfth District to succeed Victor F. Greco, MD, Luzerne County, who is not eligible for reelection; a trustee for the Interspecialty Section to succeed James R. Regan, MD, who is eligible for reelection; a trustee for the Young Physicians Section to succeed John R. Martell Jr., MD, who is ineligible for reelection; and a trustee for the Medical Student Section to succeed Stacy L. Krisher, who is eligible for reelection.

In accordance with Chapter X, Section 1 of the Bylaws, elections for delegates and alternate delegates to the American Medical Association are in order. In accordance with Standing Rule Number 10 (adopted October 22, 1982), elections for delegates will be held on Saturday morning, October 22, 1994, and elections for alternate delegates will be held on Sunday morning, October 23, 1994.

Delegates whose terms expire December 31, 1994, are:

1. R. William Alexander, MD (Berks County)
2. Richard D. Baltz, MD (Dauphin County)
3. Doris G. Bartuska, MD (Philadelphia County)
4. Joseph B. Blood Jr., MD (Bradford County)
5. Betty L. Cottle, MD (Blair County)
6. James B. Donaldson, MD (Philadelphia County)
7. Victor F. Greco, MD (Luzerne County)
8. Lee H. McCormick, MD (Allegheny County)
9. John S. Parker, MD (Westmoreland County)
10. Howard A. Richter, MD (Delaware County)
11. Roberta L. Schneider, MD (Montgomery County)
12. Donald H. Smith, MD (Northampton County)

The Committee to Nominate Delegates and Alternates to the American Medical Association makes the following nominations for 12 delegates for two (2) years commencing January 1, 1995, and expiring December 31, 1996:

1. R. William Alexander, MD (Berks County)
2. Richard D. Baltz, MD (Dauphin County)
3. Doris G. Bartuska, MD (Philadelphia County)
4. Joseph B. Blood Jr., MD (Bradford County)
5. George F. Buerger Jr., MD (Allegheny County)
6. Betty L. Cottle, MD (Blair County)
7. James B. Donaldson, MD (Philadelphia County)
8. Jay L. Funkhouser, MD (Beaver County)
9. Victor F. Greco, MD (Luzerne County)
10. Lee H. McCormick, MD (Allegheny County)
11. John S. Parker, MD (Westmoreland County)
12. Howard A. Richter, MD (Delaware County)
13. Carl A. Sirio, MD (Allegheny County)
14. Donald H. Smith, MD (Northampton County)

(Note: Dr. Schneider did not wish to be renominated for an AMA delegate position.)

Alternate delegates whose terms expire December 31, 1994, are:

1. Elias Abrutyn, MD (Philadelphia County)
2. George F. Buerger Jr., MD (Allegheny County)
3. Charles J. Cattano, MD (Allegheny County)
4. Robert G. Doe, MD (Lancaster County)
5. Thomas F. Freenock Jr., MD (Delaware County)
6. Mark S. Friedlander, MD (Delaware County)
7. Jay L. Funkhouser, MD (Beaver County)
8. Robert M. Kemp, MD (Lancaster County)
9. John A. Malcolm Jr., MD (Union County)
10. John D. Paletta (Allegheny County—slotted medical student position)
11. Carl A. Sirio, MD (Allegheny County)
12. Ferdinand L. Soisson Jr., MD (Cambria County)
13. Jennifer E. Trottman, MD (Montgomery County—slotted resident physician position)

The Committee to Nominate Delegates and Alternates to the American Medical Association makes the following nominations for 11 alternate delegates for two (2) years commencing January 1, 1995, and expiring December 31, 1996:

1. Raphael J. Bonita, MD (Luzerne County)
2. Charles J. Cattano, MD (Allegheny County)
3. Robert G. Doe, MD (Lancaster County)
4. Carl A. Frankel, MD (Dauphin County)
5. Thomas F. Freenock Jr., MD (Delaware County)
6. Mark S. Friedlander, MD (Delaware County)
7. George R. Green, MD (Montgomery County)
8. Andrew W. Gurman, MD (Blair County)
9. Virginia E. Hall, MD (Dauphin County)
10. Richard N. Harris, MD (Allegheny County)
11. Lila S. Kroser, MD (Philadelphia County)
12. Lynn M. Lucas-Fehm, MD (Philadelphia County)

(Note: Drs. Abrutyn and Kemp did not wish to be renominated for AMA alternate delegate positions.)

(Note: Should the House adopt Subject Nine calling for deunification, the Society would be entitled to two less delegates and alternate delegates.)

The Committee to Nominate Delegates and Alternates to the American Medical Association makes the following nomination for one slotted position for alternate delegate for a resident physician for a one-year term commencing January 1, 1995, and expiring December 31, 1995:

1. Jennifer E. Trottman, MD (Montgomery County)

The Committee to Nominate Delegates and Alternates to the American Medical Association has not yet received a nomination for the slotted position for alternate delegate for a medical student for a one-year term commencing January 1, 1995, and expiring December 31, 1995. Mr. Paletta did not wish to be renominated for this slotted position. Also to be elected will be three members to serve on the Committee to Nominate Delegates and Alternates to the American Medical Association. The term of Matthew Marshall Jr., MD (Allegheny County) expires; he is not eligible for reelection. The term of Donald E. Parlee, MD (Bucks County) expires; he is eligible for reelection. There will also be an election to fill the vacancy for the unexpired two-year term of John E. Devenney, MD (Montgomery County).

In accordance with Chapter XVII, Section 2 of the Bylaws, the Board of Trustees nominates the following members for two vacancies on the Judicial Council:

For the office now held by Raymond C. Grandon, MD (Dauphin County), who is eligible for reelection, the board nominates Raymond C. Grandon, MD.

For the office now held by David W. Clare, MD (Allegheny County), who is eligible for reelection, the board nominates David W. Clare, MD.

Set forth below is the text of the proposed bylaws revisions. Deletions from existing bylaws are indicated by brackets; additions are italicized.

SUBJECT ONE

ELIMINATION OF DUES CATEGORIES IN BYLAWS

The Board of Trustees, at its March 9, 1994, meeting, directed the Committee on Bylaws to prepare appropriate bylaws language for consideration by the board at its May meeting to eliminate references to dues categories in the bylaws. The proposed language, which was approved by the Board of Trustees at its May 11, 1994, meeting, is set forth below.

Chapter I - Membership
Section 3 - Membership Categories...
3.) Medical students enrolled in a medical school approved by this Society are eligible for active membership in this Society. Such students are not required to be members of a component county medical society, but must become members of the American Medical Association. They shall make application directly to this Society. Such students [shall pay such amount for a one- or four-year membership period as is fixed each year by the House after receiving recommendation from the Board of Trustees and] are entitled to all rights and privileges of membership. *Medical student active members shall pay such amount as is fixed each year by the House after receiving recommendation from the Board of Trustees....*

Chapter III - Assessments
Section 2 - Annual Assessment
The *full* annual assessment is to be fixed each year by the House of Delegates at the annual meeting [after opportunity has been given to the Board of Trustees to recommend the amount.] *following recommendation by the Board of Trustees....*

The full annual assessment is to be paid by all members of this Society. [Except that:

a. Senior members shall be required to pay 50 percent of the full annual assessment. A senior member is an active member of this Society who is 65 years old or older as of January 1 of the assessment year and who has been an active member of a constituent association of the American Medical Association for a total of 30 years.

b. Members on temporary military or other government service shall pay no assessment. Members in this category are active members who enter military or other government service for a period of less than four years and who enter service prior to March 1 of the assessment year or leave service after March 1 of the assessment year.

c. Residents who are active members of the State Society shall pay 10 percent of the full annual assessment for the calendar years subsequent to their first full calendar year as a resident member and otherwise shall pay no assessment.

d. Medical student active members shall pay such amount as is fixed each year by the House after receiving recommendation from the Board of Trustees.

e. Active members unable to practice because of illness or disability shall pay no annual assessment, provided the member's component society also levies no assessment.

f. Affiliate members shall pay 10 percent of the full annual assessment, except that a county medical society executive shall pay no assessment.

g. Active members shall pay no assessment for the period between the initial granting of a license to practice medicine in Pennsylvania and the end of the first full calendar year after the initial granting of the license; however, an active member, who previously paid no annual assessment or 10 percent of the full annual assessment because he was a resident, shall pay 50 percent of the full annual assessment for the period between the completion of a training program and the end of the first full calendar year of practice. An active member who pays no assessment or 50 percent of the full assessment under this subsection shall pay 75 percent of the annual assessment in the subsequent full calendar year. Physicians receiving their licenses within the same year as completion of their residency programs will be recognized in this newly licensed status providing they have not received a free year during residency.

h. Honorary members shall pay no annual assessment.

i. New members joining after November 1 of the assessment year shall pay no assessment, provided that the annual assessment for the relevant membership category is paid for the following year.

j. New members joining after July 1 of the assessment year, but before November 1, shall pay 50 percent of the annual assessment.

k. Associate members shall pay no annual assessment, except that if they elect to receive publications of the State Society, they shall pay (1) 10 percent of the full annual assessment each year, or (2) one full annual assessment in the year following the granting of associate status but no assessments thereafter.

l. Female physicians, who are active members, in the year after a maternity leave shall pay no annual assessment, provided the member's component society also levies no assessment.

m. Members in their first year of membership as active members in other than the resident or medical student categories shall be required to pay 90 percent of the full annual assessment if payment is made within 30 days of being billed. This subsection shall become effective upon adjournment of the 1994 House of Delegates.

n. Members in their first year of practice shall pay 20 percent of the full annual assessment; 40 percent in their second year; 60 percent in their third year; and 80 percent in their fourth year. The first-year membership discount, when applicable, shall further reduce payment in this category by 10 percent of the full active dues. This subsection shall become effective upon adjournment of the 1994 House of Delegates.] *The Board of Trustees may establish exceptions to the full annual assessment for categories of members. The Board of Trustees shall annually submit these categories of members to the House of Delegates for its approval. Pilot programs for dues category changes shall have no longer than a three-year cycle. These programs shall be submitted annually to the House of Delegates for its information until such time as final implementation is requested.*

Chapter IV - Funds
Section 1 - Special Funds...
The House of Delegates may require the Board of Trustees to allocate specific portions of the *full* annual assessments to such fund or funds....

Chapter IV - Funds
Section 3 - Medical Benevolence Fund
Each year the Board of Trustees, with the approval of the House of Delegates, may appropriate a sum not to exceed 15 percent of the *full* annual assessment for all active members to be allocated to The Educational and Scientific Trust of the Pennsylvania Medical Society....

Chapter IV - Funds
Section 4 - Educational Fund
Each year the Board of Trustees, with the approval of the House of Delegates, may appropriate a sum not to exceed 15 percent of the *full* annual assessment for all active members to be allocated to The Educational and Scientific Trust of the Pennsylvania Medical Society....

Chapter VIII - House of Delegates
Section 2 - Duties - In addition to the business to be conducted as prescribed in these bylaws, it shall be the duty of the House of Delegates to:...
c. fix the *full* annual assessment....

SUBJECT TWO

CHANGE IN QUORUM REQUIREMENT FOR HOUSE OF DELEGATES

The 1993 House of Delegates approved a recommendation from the floor of the House that the quorum requirement for the House of Delegates be changed from the current 75 delegates to 40 percent of the seated delegates. The Committee on Bylaws/ Reference Committee A recommended that the quorum requirement be changed from the current 75 delegates to 40 percent of the total allotted delegates. The proposed language is set forth below.

Chapter VIII - House of Delegates
Section 9 - Quorum - [Seventy-five] *Forty percent of the* seated delegates shall constitute a quorum to conduct business of any session of a meeting of the House of Delegates.

SUBJECT THREE

ESTABLISHMENT OF MEMBERSHIP CATEGORY FOR GROUP PRACTICE ADMINISTRATORS

The 1993 House of Delegates adopted Recommendation 2 of Board Report II calling for the establishment of a membership category for group practice administrators. The proposed language is set forth below. (*Note:* If Subject One is adopted, Subject Three becomes moot except for the creation of the membership category for group practice administrators. The addition to Chapter I, Section 3 of "or (8) group practice administrators." would remain; the three additional italicized sentences would be moot. The proposed language to Chapter III, Section 2 would also be moot.)

Chapter I - Membership
Section 3 - Membership Categories...
c. Affiliate Member - Upon recommendation and certification by the component society, any member of a component society not engaged in active practice within the jurisdiction of the component society may be an affiliate member of this Society and remain as such providing the individual is one of the following: (1) a physician who is a member of a national medical society of a foreign country; (2) an American physician who is engaged in missionary or philanthropic labors who may or may not have an unlimited license to practice medicine and surgery in the Commonwealth of Pennsylvania; (3) a full-time teacher of medicine or of the arts and sciences allied to medicine who does not have a license to practice medicine and surgery in the Commonwealth of Pennsylvania; (4) a physician who is engaged in research or administrative medicine in Pennsylvania who does not have an unlimited license to practice medicine and surgery in the Commonwealth of Pennsylvania; (5) a physician who is retired from active practice; (6) a physician who has moved out of Pennsylvania and concurrently maintains active membership in the state medical society and the component society of the state society in the new state of residence; [or] (7) a county society

RESOLUTION DEADLINE FOR SOCIETY'S ANNUAL MEETING

Deadline for submission of resolutions for consideration by the 1994 Pennsylvania Medical Society House of Delegates is September 21, 1994. Late submissions require a two-thirds vote to become House business.

Any member of the Society may write a resolution. However, resolutions must be introduced by a delegate. For assistance, contact your county medical society's delegates to the House.

Send resolutions to: Kay Barrett, Pennsylvania Medical Society, P.O. Box 8820, Harrisburg, PA 17105-8820; or fax to: (717) 558-7840.

PAIN MANAGEMENT

A MEDICAL-PSYCHIATRIC APPROACH

A symposium jointly sponsored by the
Stress and Chronic Pain Management Program of Friends Hospital and the Psychiatric Physicians of Pennsylvania
Saturday, September 17, 1994
Friends Hospital
Philadelphia, Pennsylvania

This one-day symposium will focus on the diagnosis, current treatment strategies,and pitfalls in practice for the treatment of chronic benign pain, including the expanding role of psychiatry in the treatment of chronic pain.

Dues for administrators not qualified for free membership will be set at an amount equal to that currently paid by affiliate members. During recruitment efforts with group practices, this criteria may be waived in order to offer free membership to an administrator for a maximum of two years....*

SUBJECT FOUR

TWO PERCENT DISCOUNT FOR EARLY PAYMENT OF DUES

The 1993 House of Delegates adopted Board Report F. Recommendation 2 called for offering, at the time of the next dues increase, a two percent discount to physicians who remit dues within the first 30 days of billing. The proposed language is set forth below. (*Note:* If Subject One is adopted, Subject Four becomes moot.)

Chapter III - Assessments
Section 4 - Payment of Assessments - The annual assessment, which is due January 1 of the assessment year, shall be paid through the member's component society to the executive vice president of this Society, except that the annual assessment of a medical student shall be paid directly to the executive vice president of this Society. The annual assessment, if not paid by March 1 of the assessment year, shall be considered a delinquent assessment. Provided, however, that the executive vice president may provide for installment payment of dues after March 1. [This provision shall become effective upon the adjournment of the 1994 House of Delegates.] *Physicians who remit dues within the first 30 days of billing shall receive a two percent discount. This provision shall become effective upon the next dues increase of the Society occurring after the 1993 House of Delegates....*

SUBJECT FIVE

REDUCED DUES CATEGORY FOR PHYSICIANS EARNING LESS THAN $60,000

The 1993 House of Delegates adopted Board Report FF. Recommendation 3 called for the establishment of a reduced dues category for physicians earning less than $60,000 adjusted gross practice income and that the reduction be 20 percent off the full active dues category. The proposed language is set forth below. (*Note:* If Subject One is adopted, Subject Five becomes moot.)

Chapter III - Assessments
Section 2 - Annual Assessment - ...
o. Physicians earning less than $60,000 adjusted gross practice income shall receive a reduction of 20 percent of the full active dues.

SUBJECT SIX

DATE JOINED BILLING SYSTEM

The 1993 House of Delegates adopted Resolution 93-51, Starting Dates of Membership, calling for the Society to amend its bylaws to provide that each member's year of membership begin during the month the member joins the Society; further, that each year the Society bill the member for the membership year beginning in that month. At its March 9, 1994, meeting, the Board of Trustees approved a recommendation from the Council on Membership, directing the Committee on Bylaws to develop appropriate bylaws language for consideration by the 1994 House of Delegates to change to a date joined billing cycle for all members; further, that the program be delayed one year before implementation. The proposed language is set forth below. (*Note:* If Subject One is adopted, the proposed amendments to Chapter III, Section 2 become moot.)

Chapter II - Component Societies
Section 7 - Membership Assessments - The secretary, [or] the treasurer, *or the designated agent* of each component society shall[, prior to January 1 of each year,] render an annual assessment to each member of said component society, indicating that payment of this assessment is due to this Society [on January 1 or will be considered delinquent if not paid before March 1.] *on the last day of the month in which the member joined the Society or the member will be considered delinquent.* Provided, however, that the executive vice president may provide for installment payment of dues [after March 1] *beyond the month joined of the assessment year.* This provision shall become effective upon adjournment of the [1994] *1995* House of Delegates....

Chapter III - Assessments
Section 2 - Annual Assessment - ...
a. Senior members shall be required to pay 50 percent of the full annual assessment. A senior member is an active member of this Society who is 65 years old or older [as of January 1] *in the year prior to the date joined* of the assessment year and who has been an active member of a constituent association of the American Medical Association for a total of 30 years.

b. Members on temporary military or other government service shall pay no assessment. Members in this category are active members who enter military or other government service for a period of less than four years [and who enter service prior to March 1 of the assessment year or leave service after March 1 of the assessment year]....

[i. New members joining after November 1 of the assessment year shall pay no assessment, provided that the annual assessment for the relevant membership category is paid for the following year.

j. New members joining after July 1 of the assessment year, but before November 1, shall pay 50 percent of the annual assessment.]....

of the assessment year] *in the month joined*, shall be paid through the member's component society to the executive vice president of this Society, except that the annual assessment of a medical student shall be paid directly to the executive vice president of this Society. The annual assessment, if not paid [by March 1] *in the month joined* of the assessment year, shall be considered a delinquent assessment. Provided, however, that the executive vice president may provide for installment payment of dues [after March 1] *beyond the month joined.* This provision shall become effective upon the adjournment of the [1994] *1995* House of Delegates. A special assessment shall be paid directly to the executive vice president prior to the due date of any special assessment.

Chapter III - Assessments
[Section 6 - Assessment Year - The calendar year shall be the assessment year for the purpose of the annual assessment of members and the fiscal operation of this Society.]

Chapter III - Assessments
Section [7] *6* - Other Income - ....

Chapter XVIII - Disciplinary Bodies/Proceedings and Appeals
Section 13 - Reinstatement of Membership After Termination - Any person whose membership has been terminated for failure to pay a delinquent assessment shall be reinstated to membership without any break in continuity of membership upon payment of the delinquent assessment in full [before December 31] *by the month prior to the month joined* of the assessment year and reinstatement by his component society. No such member under any circumstances shall be considered to be a member in good standing during the period between January 1 of the year for which assessment was delinquent and the date of reinstatement for the purposes of any section of these bylaws....

SUBJECT SEVEN

GENDER-NEUTRAL LANGUAGE REVISIONS

Set forth below are proposed gender-neutral language revisions.

Chapter XIV - The Board of Trustees
Section 9 - Duties of Individual Trustees - [Each t]*Trustees* shall be the representatives of this Society for [his] *their* constituents and shall report on communications or visits with [his] *their* respective constituents to the Board of Trustees and further, report annually to the House of Delegates.

[Each t]*Trustees* shall help to strengthen organized medicine among [his] *their* constituents, be a source of information as to the status of the profession, increase the participation of [his] *their* constituents, and report annually to the House of Delegates.

[Each t]*Trustees* shall attend the meetings of the Board of Trustees and perform other such duties as may be assigned by the Board of Trustees.

[Each d]*District trustees* shall serve as chairs of all meetings of the district boards of censors of [his] *their* districts in accordance with these bylaws.

Chapter XIV - The Board of Trustees
Section 11 - Vacancies in Board Offices - Should the chair of the Board be incapacitated or unable to perform the duties of that office as determined by the Board of Trustees, then the vice chair shall act in [his stead] *place of the chair.*

Should both the chair and the vice chair of the Board be incapacitated or unable to perform their duties of office as determined by the Board of Trustees, then the Board shall elect a *new* chair and a vice chair from among its members [to act in their steads].

SUBJECT EIGHT

THE JUDICIAL COUNCIL

The Judicial Council has proposed the following bylaws changes for consideration by the 1994 House of Delegates.

Chapter XVII - The Judicial Council
Section 1 - Duties - The judicial power of this Society shall be vested in the Judicial Council. Its decisions shall be final, subject to the right of appeal to the [Judicial] Council *on Ethical and Judicial Affairs* of the American Medical Association as provided in the constitution and bylaws of the American Medical Association and in the bylaws of this Society....

Section 6 - *General Powers* - *The Council shall have such powers as are required to properly consider all questions of medical ethics and the interpretation of the bylaws, resolutions, and rules of this Society.*

The Council may determine that any provision, or the manner of adoption of any provision, of the bylaws or any resolution, rule, or other action of the House of Delegates is contrary to law or to the bylaws or to the duly adopted procedures, resolutions, or rules of this Society, and is therefore invalid in whole or in part. In such event, the Council shall forthwith report its action to the executive vice president of this Society, or in the absence thereof, to any officer of this Society. The executive vice president or such officer shall promptly call a meeting of the Board of Trustees to convene within 21 days from the date of such action by the Council. The purpose of the meeting shall be to effect the intent of the House of Delegates by some other means if such is possible within the powers granted to the Board of Trustees under the bylaws.

In acting on matters within its jurisdiction the Judicial Council shall not make any determinations based on its own policies, nor shall any of its decisions constitute legislation for this Society. Nothing contained in this section, however, shall prohibit the Council from interpreting the policies established by the House of Delegates or the Board of Trustees.

The Council also shall have power, at its discretion, to investigate general professional conditions and all general matters pertaining to the relations of physicians to one another or to the public. It may make such recommendations to the House of Delegates or the component societies as it deems necessary.

The Judicial Council shall not be bound by the rules of evidence used in courts. It may receive oral or written evidence judged by Council members to present the relevant facts.

Section [6] 7 - Original Jurisdiction
(a) The Council shall have original jurisdiction in:

[(a)] *(1)* all questions involving [membership in this Society or in a component society, or the rights and standing of members, whether in relation to other members, to component societies, to the State Society, or to the public, except as

such questions arise in connection with disciplinary proceedings instituted by any component society or any board of censors or other similar group;

(b) all controversies falling under] *interpretations of* the bylaws of this Society, or the Principles of Medical Ethics, [including] *but excluding* cases in which a member has been convicted of an offense or committed to an institution under a charge for which his medical license may be revoked, [but excluding] *and* all other controversies involving the discipline of a member *unless heard pursuant to subsection (3) below*; [and]

[(c)]*(2)* controversies between two or more component societies or their members[.] *; and*

(3) all other controversies involving the discipline of a member when a complaint is received by the Judicial Council pursuant to Section 1 of Chapter XVIII of these bylaws.

(b) Due Process - The Judicial Council may adopt necessary and appropriate rules and regulations relating to the consideration of original jurisdiction cases brought before the Judicial Council, except that in all cases heard by the Judicial Council pursuant to Section 1 of Chapter XVIII of these bylaws, the Council shall comply with the due process protections contained in the Model Bylaws for a Pennsylvania County Medical Society, Chapter XIV, with respect to content of the complaint and conduct of the hearing process, except that voting requirements and conflict of interest rules of these bylaws control.

(c) Decision - If the decision of the Judicial Council finds the member guilty of any of the charges, the decision shall state the penalty, if any, to be imposed. The penalty may be censure, suspension, expulsion from membership in this Society, or other penalty, regardless of any recommendation or suggestion for penalty made in the charges.

Section [7] *8* - Appellate Jurisdiction

(a) The Council shall have appellate jurisdiction to review the proceedings in disciplinary cases before any [intermediate appellate body created under the bylaws hereof,] *district board of censors* or before any final tribunal of any component society in appeals taken pursuant to the provisions of the bylaws of this Society. *On appeal, the Council may not overturn the facts of the case if supported by substantial evidence.*

(b) Due Process - When the Judicial Council is required to make a legal determination, such as in an appeal, or determinations with respect to interpretation of bylaws, questions of medical ethics, and resolutions and rules of the Society, the following shall apply: the member has the right to be represented by an attorney or by any other person of his choice; the member may present any matter pertinent to his defense.

Except in extraordinary circumstances as determined by the Council, the Judicial Council shall not receive new or additional evidence in appeal cases.

[Section 8 - General Jurisdiction - The Council shall have jurisdiction on all questions of medical ethics and on the interpretation of the bylaws, resolutions, and rules of this Society.

The Council may determine that any provision, or the manner of adoption of any provision, of the

bylaws or any resolution, rule, or other action of the House of Delegates is contrary to law or to the bylaws or to the duly adopted procedures, resolutions, or rules of this Society, and is therefore invalid in whole or in part. In such event, the Council shall forthwith report its action to the executive vice president of this Society, or in the absence thereof, to any officer of this Society. The executive vice president or such officer shall promptly call a meeting of the Board of Trustees to convene within 21 days from the date of such action by the Council. The purpose of the meeting shall be to effect the intent of the House of Delegates by some other means if such is possible within the powers granted to the Board of Trustees under the bylaws.

In acting on matters within its jurisdiction the Judicial Council shall not make any determinations based on its own policies, nor shall any of its decisions constitute legislation for this Society. Nothing contained in this section, however, shall prohibit the Council from interpreting the policies established by the House of Delegates or the Board of Trustees if the statement of such policy is ambiguous.

The Council also shall have power, at its discretion, to investigate general professional conditions and all matters pertaining to the relations of physicians to one another or to the public. It may make such recommendations to the House of Delegates or the component societies as it deems necessary.]

Chapter XVIII - Disciplinary Bodies/Proceedings and Appeals
Section 1 - Scope of Disciplinary Proceedings - No disciplinary proceedings shall be conducted by any body of this Society, except (a) a component society, (b) original disciplinary proceedings by the Judicial Council as provided in Section [3] *2* of this chapter, (c) referrals and appeals to district boards of censors as provided in Section 1 and Section [4] *3* of this chapter, and (d) appeals to the Judicial Council as provided in Section [5] *4* of this chapter.

a. Components' Boards of Censors - Each component society shall establish a county board of censors to be responsible for disciplinary proceedings involving members of the component society. Each county board of censors shall file a report on disciplinary activities annually with the secretary of this Society.

b. District Boards of Censors - Each component society shall elect a district censor who may not be a member of a grievance committee or the component society's board of censors or the Judicial Council of this Society.

1. The district censor shall serve on the district board of censors comprising the district censors from each of the component societies in the district.

2. The trustee from the district shall serve as chair[man] of the district board of censors without the right to vote.

3. In districts with fewer than three component societies, there shall be added to the district's board of censors the district censors of the adjoining component societies.

4. The district boards of censors shall have jurisdiction in all cases of appeals from the decisions of component societies as provided in these bylaws.

5. The district board of censors may receive cases for original jurisdiction when requested to do so by a county board of censors, or by the secretary of this Society, as described in subsection c of this section.

c. Communications Received by the Secretary - All written and signed communications received by the secretary of this Society, containing charges against a member which could require disciplinary proceedings, shall be forwarded by the secretary to the appropriate grievance committee. If the secretary shall not have received reasonable assurances within 45 days after receipt of the communication by the grievance committee that the grievance committee has considered the charges, *or if the secretary receives information from the complainant or from other sources that the charges have not been considered within the same time period,* the secretary [may] *shall* refer a copy of the communication to the county board of censors, *which may initiate original disciplinary proceedings. The grievance committee shall state in writing its reasons for not concluding the case, which writing shall be forwarded to the county board of censors.*

If the secretary shall not have received reasonable assurances within 45 days after receipt of a copy of the communication by the county board of censors that the county board of censors has considered the charges, *or if the secretary receives information from the complainant or from other sources that the charges have not been considered within the same time period,* the secretary [may] *shall* refer a copy of the communication to the district board of censors, which may initiate original disciplinary proceedings. *The county board of censors shall state in writing its reasons for not concluding the case, which writing shall be forwarded to the district board of censors.*

If the secretary shall not have received reasonable assurances within 45 days after receipt of a copy of the communication by the district board of censors that the district board of censors has considered the charges, or if the secretary receives information from the complainant or from other sources that the charges have not been considered within the same time period, the secretary shall refer the communication to the Judicial Council, which may, at its discretion, initiate original disciplinary proceedings. The district board of censors shall state in writing its reasons for not concluding the case, which writing shall be forwarded to the Judicial Council.

Section 2 - General Rules
(a) [Due Process - When the Judicial Council or the district boards of censors are required to make a determination with respect to the facts of a particular case, they shall comply with the due process protections contained in the Model Bylaws for a Pennsylvania County Medical Society, Chapter XIV, Sections 4 (as to content of the complaint) and 6, with the exception of subsection (H), which refers to voting.

When the Judicial Council is required to make a legal determination, such as in an appeal, or determinations with respect to interpretation of bylaws, questions of medical ethics, questions involving membership, and resolutions and rules of the Society, the following shall apply: the member has the right to be represented by an attorney or by any other person of his choice; the member may present any matter pertinent to his defense.

Daily challenges, lifetime results℠

Harmarville Rehabilitation Center is a 202-bed non-profit rehabilitation hospital providing inpatient and outpatient physical medicine and rehabilitation to adults and adolescents in Pennsylvania, western New York, western Maryland, West Virginia and Ohio.

Our programs include:

- Spinal Cord Injury
- Traumatic Brain Injury
- Stroke/Neurological Rehabilitation
- Oncology Rehabilitation
- Industrial Rehabilitation and Occupational Medicine Services
- Chronic Pain Management
- Orthopedic Rehabilitation
- Geriatric Rehabilitation
- Amputee Services
- Hand and Upper Extremity Rehabilitation
- Arthritis and Rheumatology

Harmarville is accredited by the Joint Commission for Accreditation of Health Care Organizations and the Commission for Accreditation of Rehabilitation Facilities for its General Inpatient Rehabilitation Program, Spinal Cord Injury Program, Head Injury Program and Head Injury Day Treatment Program.

The Center is affiliated with the University of Pittsburgh Residency Program in Physical Medicine and Rehabilitation and numerous schools of health-related professions.

For more information, please call **800-624-HOPE (4673).**

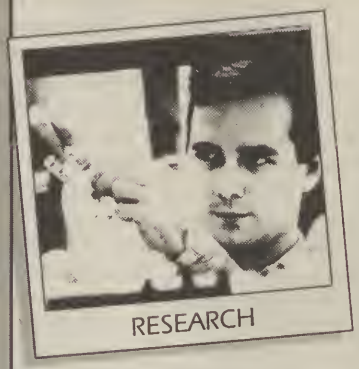
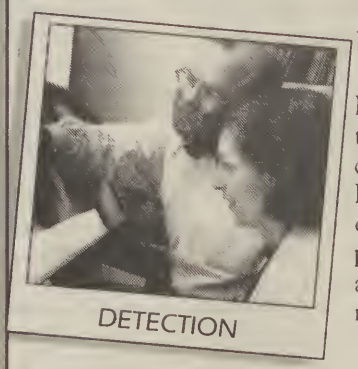
POLYCLINIC MEDICAL CENTER & FOX CHASE CANCER CENTER

Curing cancer. In our time. In your community.



DISCOVERIES THROUGH RESEARCH

Polyclinic, through its affiliation with Fox Chase Cancer Center, has access to important new research. Everyday, scientists at Fox Chase are coming closer to discovering new ways to prevent, detect and treat cancer.



INCREASING SURVIVAL BY EARLY DETECTION

Many cancers can be treated successfully if detected early. Polyclinic Regional Cancer Center offers programs to educate people about cancer risk and to help them reduce risk.

DEVELOPING NEW TREATMENTS

Polyclinic Regional Cancer Center offers access to clinical trials available only at Fox Chase, its affiliates or approved research centers. Using new cancer drugs and therapies, clinical trials enable our physicians to apply new knowledge and advances to patient treatment.

Polyclinic Regional Cancer Center's dedicated team of professionals provide the most complete diagnostic and treatment services in the Harrisburg area. Through it's affiliation with Fox Chase Cancer Center, Polyclinic can offer patients the latest in cancer therapies in their own community. Fox Chase Cancer Center is designated a Comprehensive Cancer Center by the National Cancer Institute.

Except in extraordinary circumstances, the Judicial Council shall not receive new or additional evidence in appeal cases.]

Conflict of Interest - Any member of the Judicial Council or the district board of censors who is in economic competition with the member against whom charges have been brought, or has any other conflict of interest, shall disqualify himself from participation in that particular case.

b. Decisions - The Judicial Council and the district boards of censors shall render their decisions with reasonable promptness. Decisions of the Judicial Council, whether in original proceedings or on appeals, shall be concurred in by a majority of the members of the Judicial Council present at the hearing, which shall be not less than three. Decisions of the district boards of censors shall be concurred in by a majority of the members of the district board of censors present at the hearing.

In the event of a tie vote in original proceedings before the Judicial Council, the charges against the member shall be dismissed. In the event of a tie vote in appeals, either by a district board of censors or by the Judicial Council, the decision appealed from shall be sustained.

All decisions of the Judicial Council and the district boards of censors shall be in writing. Copies thereof shall be given promptly to the interested parties. Copies of decisions of the district boards of censors shall be given promptly to the chair[man] of the Judicial Council.

[Section 3 - Original Disciplinary Cases Before the Judicial Council

a. Charges - In all cases of original disciplinary proceedings against a member of this Society before the Judicial Council as provided in these bylaws, the charge or charges upon which the proceeding is based must be brought by a majority vote of either the Board of Trustees or the district board of censors that has jurisdiction over the member's component society.

b. Decision - If the decision of the Judicial Council finds the member guilty of any of the charges, the decision shall state the penalty, if any, to be imposed. The penalty may be censure, suspension, or expulsion from membership in this Society, regardless of any recommendation or suggestion for penalty made in the charges.]

Section [4] *3* - Appeals to District Boards of Censors - Any member of a component society who has been censured, suspended or expelled thereby and any physician who has been refused membership by a component society or any component society aggrieved by the decision of another component society's board of censors shall have the right of appeal to the district board of censors for that district.

To have the right of appeal:

(a) written notice of the appeal must be given to the trustee of the district within [60] *30* days after the censure, suspension, expulsion, or notice of rejection of an application for membership (the failure of a component society to accept or reject an application for membership within six months after the filing thereof shall automatically be deemed a rejection at the end of said six months period); and

(b) a brief outlining the basis of such appeal must be presented to said trustee within [90] *60* days after either of the events heretofore mentioned.

Section [5] *4* - Appeals to the Judicial Council - Any member of any component society or any component society aggrieved by a decision of a district board of censors may appeal from such decision. Such member or society must give written notice of said appeal to the Judicial Council within [60] *30* days after the date of the decision of the district board of censors and must submit a brief, outlining the basis of such appeal, to the Judicial Council within [90] *60* days after the decision of the district board of censors. The action of the Judicial Council in cases of appeals shall be limited, except in extraordinary circumstances, to a review of the record of the proceedings [before the district board of censors].

Section [6] *5* - Appeals to the [Judicial] Council *on Ethical and Judicial Affairs* of the American Medical Association - Any component society or any member of the American Medical Association aggrieved by a decision of the Judicial Council of this Society may appeal such decision to the [Judicial] Council *on Ethical and Judicial Affairs* of the American Medical Association in accordance with the bylaws and rules thereof. If such right of appeal is not exercised, then the effective date of decisions as prescribed in these bylaws shall prevail.

Section [7] *6* - Effective Date of Decisions of Component Societies, District Boards of Censors and the Judicial Council - No action of any component society censuring, suspending, or expelling a member and no action of any district board of censors affirming any such action shall become effective so long as the member has any right of appeal according to these bylaws, or during the pendency of any such appeal.

All decisions of the Judicial Council, whether in original proceedings or on appeals, shall become final upon the issuance thereof, except that any such decision involving a member of the American Medical Association shall not become effective until 30 days after the decision of the Judicial Council, and, if the member or the component society, if any, has given written notice to the Council on Ethical and Judicial Affairs of the American Medical Association during said 30-day period of his or its intention to appeal to that body and furnishes a copy of such notice to the Judicial Council of this Society, and, in the case of a member, to the secretary of his component society, until the expiration of the appeal period and the final disposition *by* the Council on Ethical and Judicial Affairs of the American Medical Association.

Section [8] *7* - Notification of Expulsion - Written notification of all final decisions expelling a member for disciplinary reasons shall be given to the appropriate licensing body and the appropriate hospital medical staff.

Section [9] *8* - Automatic Suspension - Any member of this Society convicted by a court of competent jurisdiction of committing a felony or any crime involving moral turpitude, shall be automatically suspended for an indefinite period. It shall be the duty of the secretary promptly to inform the appropriate county board of censors of any such conviction of any member of this

Society, however, any member of the Society having any such information should promptly report the same to the county board of censors.

The county board of censors shall make due inquiry. If it finds that such member has, in fact, been so convicted, the county board of censors shall order a certified copy of the conviction from the court and upon receipt thereof shall file said copy with the member's records. The county board of censors shall thereupon notify the member that he will stand suspended from membership for an indefinite period, beginning 90 days following his conviction by the court, or 10 days following the notice if such notice is issued more than 90 days after the conviction, unless prior to the effective date of the suspension, the member certifies to the county board of censors that he has filed an appeal from the conviction.

If the member so convicted has so appealed, the suspension from membership shall be stayed until such time as the appeal has been finally disposed of by a court of last resort. Such suspension shall be completely nullified in the event the court reverses the member's conviction.

Section [10] *9* - Other Suspensions of Membership - A member shall be suspended from membership in this Society:

(a) on December 31 of any year if he is an active or associate member who has failed to qualify for the American Medical Association's Physician's Recognition Award provided the office of the executive vice president has given such member 60 days notice prior to December 31 that such suspension will be invoked unless such member shall submit sufficient supplemental records to fulfill such award requirements by December 31, and such suspension shall remain in force until such member submits sufficient supplemental records to fulfill the award requirement;

(b) upon suspension of his membership in his component society; and

(c) upon the effective date, as provided in these bylaws, of an order to that effect issued by the Judicial Council of this Society or a district board of censors.

Section [11] *10* - Rights of Members During Suspension - The suspended member shall not be entitled to exercise any of the rights and privileges of membership during the period of suspension, but shall continue to be obligated for the payment of annual assessments without any reduction whatsoever.

Section [12] *11* - Termination of Membership - The membership of a member of this Society shall terminate:

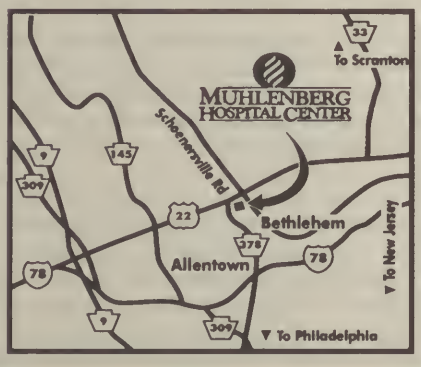
(a) in the case of active or associate members suspended who have not completed the continuing medical education requirement for the American Medical Association's Physician's Recognition Award by the end of a one year period of suspension;

(b) upon (i) termination of his membership in his component society for any reason whatsoever, or

MUHLENBERG HOSPITAL CENTER

WHERE THE FUTURE OF HEALTHCARE MEETS

A Tradition of Caring



Muhlenberg Hospital Center, easily accessible from Route 22, Route 378 or Schoenersville Road, has been serving the Lehigh Valley for over 30 years.

At Muhlenberg Hospital Center, you will find a caring, professional staff delivering the following inpatient and outpatient healthcare services:

- **Medical • Surgical • Psychiatric • Emergency Services**
- **Physical Therapy • Occupational Health**
- **Cardiopulmonary Medicine • Cardiac Catheterization**
- **Laboratory Services • Radiology Services including**
  CT Scan, General X-Rays, Interventional Radiology, Mammography, MRI, Nuclear Medicine & Ultrasound

Muhlenberg Rehabilitation Center is also located on the Hospital's Campus.

2545 Schoenersville Road • Bethlehem, PA 18017 • 610 861-2200

FFICIAL CALL

(ii) failure to pay a delinquent assessment within 30 days after notice of such delinquency as provided in these bylaws, or (iii) three months after ceasing to be eligible for the class of membership in which he is a member as specified in these bylaws, unless at such time an application or certification for another class of membership for which the member will become immediately eligible is pending in the office of the executive vice president of this Society; and
(c) upon the effective date, as provided in these bylaws, of an order to that effect issued by the Judicial Council of this Society or a district board of censors.

Section [13] *12* - Reinstatement of Membership After Termination - Any person whose membership has been terminated for failure to pay a delinquent assessment shall be reinstated to membership without any break in continuity of membership upon payment of the delinquent assessment in full before December 31 of the assessment year and reinstatement by his component society. No such member under any circumstances shall be considered to be a member in good standing during the period between January 1 of the year for which assessment was delinquent and the date of reinstatement for the purposes of any section of these bylaws.

Any active dues-paying or associate member whose membership has been terminated for failing to meet the requirements for the American Medical Association's Physician's Recognition Award shall be reinstated to membership if, after meeting all the other requirements for reinstatement, he submits evidence that he has met all the requirements for such award for a current period and that at least one-third of the required hours were earned during the previous 12 months.

Any person whose membership has been terminated for failure to pay a special assessment shall be reinstated upon payment of the delinquent special assessment.

Section [14] *13* - Reinstatement of Membership After Automatic Suspension - Any member indefinitely suspended from membership pursuant to the provisions of Section [9] *8* of this chapter may be reinstated to full membership after a period of six months from the effective date of the suspension.

Applications for reinstatement may be submitted not earlier than four months after the effective date of the suspension. Applications shall be in writing and shall set forth the reasons why the member believes he is entitled to reinstatement. They shall be filed with the county board of censors.

The county board of censors, after due inquiry, shall meet to consider the application. The suspended member shall be reinstated upon a majority vote of the members of the county board of censors present and voting at the meeting, provided that there is a quorum of at least four members.

Section [15] *14* - Expulsion of Unqualified Witness - Any member of this Society who testifies as an expert witness without meeting the qualifications set forth in this section shall be subject to expulsion after a due process hearing as provided for in these bylaws. An expert witness must have basic educational and professional knowledge as a general foundation for his testimony, and in addition, have current personal experience and practical familiarity

with the problems that are being considered and be actively engaged in the practice of the medical subject under discussion.

SUBJECT NINE

DEUNIFICATION

The following proposed bylaws amendments have been submitted with the requisite number of signatures of active or associate members of the Delaware County Medical Society for consideration by the 1994 House of Delegates.

Restated Articles of Incorporation...

Article VII. Membership in the Corporation shall be limited exclusively to persons who are members in good standing of a county medical society duly affiliated with the Corporation, and the failure on the part of any such member to keep himself or herself in good standing in such affiliated county medical society [and the AMA] shall be sufficient cause for expelling the member from the Corporation, either by automatic termination of membership or otherwise as the Bylaws of the Corporation shall provide. Nothing herein shall be construed to prevent the Corporation from electing honorary members, medical students, or special members from among persons who are not members in good standing of affiliated county medical societies.

Chapter I - Membership
Section 2 - Admission to Membership - To be a member of this Society a physician must be a member of a component society. The term, physician, means a person who has received formal and recognized training in the art and science of medicine and is qualified to acquire an unlimited license to practice medicine and surgery in the Commonwealth of Pennsylvania.

Once elected to a category of membership other than honorary, in a component society, the member is required to become a member of this Society [and the American Medical Association] within three months by paying any appropriate assessment and having the component society certify to the executive vice president of this Society that the member possesses the qualifications for the category as described in these bylaws.

Chapter I - Membership
Section 3 - Membership Categories
a. Active Member: ...
3.) Medical students enrolled in a medical school approved by this Society are eligible for active membership in this Society. Such students are not required to be members of a component county medical society[, but must become members of the American Medical Association]. They shall make application directly to this Society....

Quarterly Report of House Available

In accordance with Resolution 92-27 of the House of Delegates, the quarterly report on actions of the House is now available from the State Society. The report is provided to members to enable them to respond to and participate in upcoming House activities. To request a copy, call (800) 228-7823, extension 403.

EVERYPLACE YOU WANT TO BE
IS EITHER DOWNSTAIRS OR DOWN THE BLOCK.

Conveniently located, the beautifully appointed Sheraton University City features reasonable rates, outstanding meeting facilities and Smart Alex, our lively restaurant that's a local favorite. Just down the block are the University of Pennsylvania and Drexel University, as well as the Hospital of the University of Pennsylvania, the Children's Hospital of Philadelphia and Presbyterian Hospital. But every bit as important as our great location is our great service. You'll find our staff to be friendly, competent and quick to take care of your needs. Please call 215-387-8000 or call toll free 800-325-3535 for ITT Sheraton Worldwide Reservations.

ORDER NOW!

Reserve additional copies of the Pennsylvania Medical Society's 1994-95 Membership Directory.

The Society's more than 20,000 members are listed alphabetically, cross-indexed by county of practice location, and coded as to medical specialty. Pennsylvania's physicians and other health care providers rely on this special edition of PENNSYLVANIA MEDICINE for a comprehensive listing of all Medical Society members.

Additional copies are $53.

PHYSICIANS WANTED

Western Pennsylvania—Board Certified or prepared emergency physicians needed for staffing a community hospital emergency department near the Ohio/Pennsylvania border. Please send CV to P.O. Box 99431, Pittsburgh, PA 15233-0431.

Pennsylvania—Physician group seeks full-time and part-time physicians for an emergency department of community hospitals in central and western Pennsylvania. Please send resume to P.O. Box 99431, Pittsburgh, PA 15233-0431.

Pittsburgh, Pennsylvania—Penn Group Medical Association (PGMA), a 100-physician multi-specialty group practice affiliated with the largest HMO in Pittsburgh, is seeking BE/BC physicians in: family practice, internal medicine, pediatrics, ob/gyn, and psychiatry. We are formally affiliated with major teaching hospitals and leading community hospitals in Pittsburgh. PGMA serves eight ambulatory care centers, all conveniently located near cultural, educational, recreational, and corporate activities. Excellent salary, and fringe benefits. For confidential consideration contact: Angela Lascola, HealthAmerica, 5 Gateway Center, Pittsburgh, PA 15222, or call collect (412) 553-7502.

Physician Wanted—Internal Medicine/General Practice must be bilingual English/Spanish physician full- or part-time to join fine busy practice near Philadelphia suburb of Cheltenham. Please call M. Finnegan (215) 549-3000.

Emergency Physicians—Emergency Physician Associates is seeking quality ED physicians for a variety of practice opportunities. Director and staff positions are available. EPA contracts with hospitals in NJ, PA, and MD for the provision of emergency medicine, urgent care and industrial/occupational health services. Our client hospitals are located in rural to urban areas with patient volumes ranging from 10,000 to 75,000. At EPA we offer physicians competitive compensation, flexible schedules and shifts, occurrence-based malpractice insurance, a variety of practice settings to choose from, cooperative working environments, and supportive medical directors and corporate staff. Interested candidates may contact EPA at 1-800-848-EPA-1.

Family Practice Opportunity in NW Ohio—Join an established practice in Lima, a lovely community of 50,000. Just one hour to Dayton and Toledo. Excellent guarantee and bonus and partnership potential. Call Sherron Satow, 800-776-5776, or fax CV to 314-863-1327.

Ohio—Internal Medicine Positions. Join two aggressive internists in their very busy practice, or form an association with a very well-established internist, unlimited potential, fine living environment. Easy driving distance of Cleveland, Columbus, Toledo, and Akron. Positions carry a very competitive first-year compensation package which includes a signing bonus. Contact Bob Suleski, 250 Regency Court, Waukesha, WI 53186; 1-800-338-7107.

Emergency Physician—Pennsylvania, suburban Philadelphia. A Chester County hospital with 26,000 visits per year, seeks board certified/board eligible emergency physician for part-time/full-time work. A unique opportunity in Chester County approximately 35 miles west of Philadelphia. Teaching relationship with medical school. Competitive compensation. Send CV or contact: Robert D. Snyder, MD, FACEP, Brandywine Hospital & Trauma Center, 201 Reeceville Road, Coatesville, PA 19320; (215) 383-8518.

Primary care physicians for Cincinnati, Ohio. Rated #1 city in the nation. Large, successful physician owned organization offers autonomy, excellent income/pension, signing bonus, benefits, call, vacation, and relocation. (800) 880-2028.

POSITIONS WANTED

Seeking position in gastroenterology/internal medicine. Available now. Board certified in internal medicine. Board eligible in gastroenterology. British and U.S. trained. Licensed in Pennsylvania. Contact S.P. Nathan, South Baltimore General Hospital, 3001 South Hanover Street, Baltimore, MD 21230, (410) 752-7215.

MISCELLANEOUS

Crazed by patient billing?—ShrinkRapt, the Macintosh Psychiatric Billing & Insurance program will help! Demo only $20! 800-448-6899 or 708-513-5599. Saner Software, 37W222 Rte. 64, Suite 253, St. Charles, IL 60175.

Small clinic needs used spect and/or whole body gamma camera, and thyroid uptake system. Have complete daylight system to sell or trade. (304) 766-7121.

Sales/Marketing—Pennsylvania company looking for part- or full-time aggressive salesperson to sell to physicians and health care providers. $30K-$100K+ available annually. PC and sales experience helpful. Call (717) 796-0497.

You helped do it. Do it again.

Physicians took leading roles in informing patients of the health hazards of smoking.[1] The result: millions have quit.

Now, it's time to point out the medical risks of recreational drug use. Ask your patients if they use cocaine. Then give them the facts.

Cocaine use can lead to[2-4]:
Psychiatric symptoms ranging from irritability to paranoia
Cardiovascular problems including MI and cardiac arrest
Cerebrovascular accidents from TIA to stroke
CNS problems including seizures
And a wide range of **respiratory, renal, musculoskeletal, and GI problems**

References: 1. *A Report of the Surgeon General: Smoking and Health*, publication 79-50066. US Department of Health, Education, and Welfare, 1979. 2. Bouknight LG, Bouknight RR: Cocaine—a particularly addictive drug. *Postgrad Med* 1988;83(4):115-131. 3. Derlet RW: Cocaine intoxication. *Postgrad Med* 1989;86(5):245-253. 4. Do you know someone who needs nursing care in their home?

We have a special person to take care of your special person.

Are your patients entitled and/or eligible for Medicare benefits? If you are not sure call **MEDICAL PERSONNEL POOL** and we will help you get the answer. Bear in mind that a person need not be a Social Security recipient or over 65 to receive Medicare services. People who are disabled for 2 years or more are eligible as are people who are in dialysis for 6 months of longer. **MEDICAL PERSONNEL POOL** provides a full range of **HOME HEALTH SERVICES,** as well as private duty nursing. We provide most of these services in the home as well as in the hospital and nursing home.

PENNSYLVANIA MEDICINE
Information for Authors

PENNSYLVANIA MEDICINE, the monthly publication of the Pennsylvania Medical Society, informs Pennsylvania physicians and other health care providers of developments in the practice of medicine. But it is also a forum for the analysis, opinions, and experiences of Pennsylvania health care practitioners.

Editorial content includes a broad range of issues related to the practice of medicine. Concise articles are welcome on topics within the areas of medical economics, public health, legislation and regulations impacting medical practice, practice management, law and medicine, health system reform, communicating with patients, news of colleagues, and news of organized medicine. Clinical articles are reviewed and abstracted.

☑ **Letter of transmittal,** signed by all authors, must accompany the article and include the full names, degrees, titles, and affiliations of all authors, and the name of the author to whom reprint requests should be sent. If a computer disk containing the article is also submitted, identify the format used. The letter must include a paragraph that transfers copyright ownership to PENNSYLVANIA MEDICINE in the event that the work is published. Letter and manuscript should be submitted to: Managing Editor, PENNSYLVANIA MEDICINE, 777 East Park Drive, P.O. Box 8820, Harrisburg, PA 17105-8820.

☑ **Manuscript preparation:** Submit two copies of the manuscript, which must be original material not previously published and not under consideration by another publisher. All material, including references, tables, and legends, must be typewritten, double-spaced on standard bond paper. If at all possible, an IBM- or Macintosh-compatible disk should be included, with the manuscript entered in a WordPerfect, Microsoft Word, Multimate, Wordstar, or ASCII format.

Authors are asked to seek clarity, accuracy, and originality; attention to details of grammar, spelling, and typing are important.

☑ **Illustrations** and/or charts and graphs should be professional quality, black-and-white glossy prints, or computer generated. The name of the author, figure number, and the top of the figure should be noted on a label attached to the back of each illustration. Material taken from other publications must give credit to source; written permission for republication from the original publisher must be submitted.

☑ **References** are limited to those citations noted in the text, and should not exceed 10 citations. Each should be noted consecutively in the text by superior numbers at the end of a sentence. The style of reference is that of *Index Medicus*.

☑ **Editorial responsibility:** All manuscripts are acknowledged upon receipt and then subjected to review. Authors are usually notified of the status of their paper within four to eight weeks, however, longer delays are sometimes unavoidable. Accepted manuscripts become the permanent property of PENNSYLVANIA MEDICINE and are subject to copy editing. Authors are sent a proof and asked to respond within 48 hours with any minor changes or corrections. If proofs are not returned by the specified date, they will be considered approved as edited and typeset.

DIRECTOR
Department of Surgery

EASTON HOSPITAL is a 369-bed university-affiliated teaching hospital centrally located in northeastern Pennsylvania in proximity (1 hr.) to The Poconos, Philadelphia and New York.

To enhance our well established reputation for collaborative practice, shared governance and excellence in patient care, we are continually adding new programs and services. An example of which is our recent Open Heart accreditation, which will impact significantly on the scope of this position.

This is an opportunity for an administratively oriented, board certified Surgeon to manage development for continuing education, and the clinical direction of our Department of Surgery. This Department includes the Operating Room, Open Heart, SPU, Surgical ICU, Emergency Care Unit and an established Surgical Residency Program. The selected candidate will be sensitive to quality assurance and utilization review issues while coordinating a number of programs to maximize efficiencies.

If you would like to play a major role in the direction of our healthcare organization, please send your CV to **Human Resources, EASTON HOSPITAL, 250 South 21st Street, Easton, PA 18042.**

An equal opportunity employer, m/f
